

CONTENTS

I THEORY

1 Kinetic theory	3
1.1 Atomistic dynamics	3
1.2 Relaxation to local equilibrium	7
1.3 H-theorem	9
1.4 Length scales and transport phenomena	10
1.5 Chapman-Enskog procedure	11
1.6 The Navier-Stokes equations	13
1.7 Bhatnagar-Gross-Krook model equation	15
1.8 Exercises	15
2 Lattice Gas Cellular Automata	17
2.1 Fluids in Gridland: the Frisch-Hasslacher-Pomeau automaton	17
2.2 Fluons in action: LGCA microdynamic evolution	19
2.3 From LGCA to Navier-Stokes	27
2.3.1 Discrete local equilibria	28
2.4 Practical implementation	30
2.5 Lattice gas diseases and how to cure them	33
2.5.1 Statistical noise	34
2.5.2 Low Reynolds number	34
2.5.3 Exponential complexity	36
2.5.4 Spurious invariants	38
2.6 Summary	38
2.7 Exercises	38
3 Lattice Boltzmann models with underlying Boolean microdynamics	40
3.1 Nonlinear LBE	40
3.1.1 Lattice quantum fluids	43
3.2 The quasilinear LBE	44
3.3 The scattering matrix A_{ij}	46
3.4 Numerical experiments	49
3.5 Exercises	50
4 Lattice Boltzmann models without underlying Boolean microdynamics	51
4.1 LBE with enhanced collisions	51
4.2 Hydrodynamic and ghost fields	55
4.2.1 Field-theoretical analogies	58

4.2.2 Dimensional compactification	59
4.2.3 Removing ghost fields	60
4.3 The route to Navier-Stokes: adiabatic assumption	61
4.4 The mirage of zero viscosity	62
4.5 Numerical experiments	63
4.6 Exercises	64
5 Lattice Bhatnagar-Gross-Krook	65
5.1 Single-time relaxation	65
5.2 LBGK equilibria	66
5.3 LBGK versus LBE	68
5.4 Relation to continuum kinetic theory	70
5.5 Relation to discrete velocity models	72
5.6 LBE genealogy	72
5.7 Warm-up code	73
5.8 Exercises	73
II FLUID DYNAMICS APPLICATIONS AND ADVANCED THEORY	
6 Boundary conditions	77
6.1 General formulation of LBE boundary conditions	77
6.2 Survey of various boundary conditions	78
6.2.1 Periodic boundary conditions	79
6.2.2 No-slip boundary conditions	82
6.2.3 Free-slip boundary conditions	84
6.2.4 Frictional slip	86
6.2.5 Sliding walls	87
6.2.6 The Inamuro method	88
6.2.7 Moving walls	89
6.3 Open boundaries	90
6.4 Complex (misaligned) boundaries	91
6.4.1 Staircased boundaries	92
6.4.2 Extrapolation schemes	92
6.4.3 The picky stuff	92
6.4.4 The surfel method	93
6.5 Exactly incompressible LBE schemes	94
6.6 Exercises	96
7 Flows at moderate Reynolds number	97
7.1 Moderate Reynolds flows in simple geometry	97
7.2 LBE implementation	99
7.3 Boundary conditions	102
7.4 Flows past obstacles	103
7.5 More on the pressure field: Poisson-freedom	106

7.6 Exercises	109
8 LBE flows in disordered media	110
8.1 Flows through porous media	110
8.2 LBE flows through porous media	112
8.3 Setting up the LBE simulation	114
8.4 Deposition algorithm	119
8.5 Numerical simulations	121
8.6 Synthetic matter and multiscale modeling	122
8.7 Exercises	123
9 Turbulent flows	124
9.1 Fluid turbulence	124
9.1.1 Two-dimensional turbulence	126
9.1.2 Turbulence and kinetic scales	126
9.2 LBE simulations of two-dimensional turbulence	127
9.2.1 Seeing the invisible: sub-grid scales and numerical stability	131
9.3 Three-dimensional turbulence: parallel performance	134
9.4 Three-dimensional channel flow turbulence	136
9.5 Sub-grid scale modeling	137
9.5.1 Two-equation models	139
9.5.2 Non-local eddy viscosity models	140
9.5.3 Wall-turbulence interactions	140
9.6 Summary	141
9.7 Exercises	141
10 Out of Legoland: geoflexible lattice Boltzmann equations	142
10.1 Coarse-graining LBE	142
10.2 Finite volume LBE	143
10.2.1 Piecewise-constant streaming	144
10.2.2 Piecewise-linear streaming	145
10.2.3 Piecewise-linear collision operator	146
10.2.4 Piecewise-parabolic interpolation	148
10.3 Finite difference LBE	149
10.4 Interpolation-supplemented LBE	149
10.5 Finite element LBE	150
10.6 Native LBE schemes on irregular grids	151
10.7 Implicit LBE schemes	151
10.8 Multiscale lattice Boltzmann scheme	152
10.9 Summary	153
10.10 Exercises	154

11 LBE in the framework of computational fluid dynamics	155
11.1 LBE and CFD	155
11.1.1 Causality	156
11.1.2 Accuracy	158
11.1.3 Stability	159
11.1.4 Consistency	162
11.1.5 Efficiency	169
11.1.6 Flexibility	170
11.2 Link to fully Lagrangian schemes	172
11.3 LBE in a nutshell	175
11.4 Exercises	176
 III BEYOND FLUID DYNAMICS	
12 LBE schemes for complex fluids	179
12.1 LBE theory for generalized hydrodynamics	179
12.2 LBE schemes for reactive flows	181
12.2.1 Reactive LBE applications	183
12.3 LBE schemes for multiphase flows	186
12.3.1 Surface tension and interface dynamics	188
12.3.2 Numerical methods for flows with interfaces	190
12.3.3 Chromodynamic models	190
12.3.4 The pseudo-potential approach	192
12.3.5 The free energy approach	194
12.3.6 Finite density models	197
12.3.7 Miscellaneous multiphase LBE applications	199
12.4 LBE schemes for flows with moving objects	201
12.5 Colloidal flows	201
12.5.1 The fluctuating LBE	202
12.5.2 Solid-fluid moving boundaries	203
12.5.3 Numerical tests	205
12.5.4 Computational cost of the fluctuating LBE	208
12.5.5 Thermal equilibrium	209
12.6 Polymers in LBE flows	209
12.7 Snow transport and deposition	211
12.8 A new paradigm for non-equilibrium statistical mechanics?	212
12.9 New vistas	213
12.10 Exercises	213
13 LBE for quantum mechanics	214
13.1 Quantum mechanics and fluids	214
13.2 The fluid formulation of the Schrödinger equation	214

13.2.1 Relativistic quantum mechanics: the Dirac equation	216
13.2.2 Dirac to Schrödinger: the adiabatic approximation	218
13.2.3 The interacting case	220
13.3 The quantum LBE	220
13.3.1 Extended operator splitting $3 = 1 + 1 + 1$	221
13.3.2 Quantum LBE: move, turn and collide	222
13.3.3 Time marching	222
13.4 Numerical tests	224
13.4.1 Free particle motion	224
13.4.2 Harmonic oscillator	226
13.4.3 Scattering over a rectangular barrier	226
13.5 The quantum N-body problem	228
13.5.1 Quantum lattices for quantum computers	229
13.5.2 Bits, trits and q-bits	230
13.5.3 Quantum LBE and density functional theory	231
13.6 Exercises	232
14 Thermohydrodynamic LBE schemes	233
14.1 Isothermal and athermal lattices	233
14.2 Thermodynamic equilibria and multi-energy lattices	235
14.3 Extended parametric equilibria	236
14.4 Thermal LBE models without nonlinear deviations	240
14.5 Reduced thermohydrodynamic schemes	246
14.6 Attempts to rescue thermal LBE	248
14.6.1 Tolerance to realizability violations	248
14.6.2 The kinetic closure approach	248
14.6.3 Non space-filling lattices	249
14.6.4 Models with internal energy	249
14.7 The Digital Physics approach	251
14.8 Fake temperature schemes	252
14.9 Summary	252
14.10 Exercises	253
15 Finale: Who needs LBE?	254
15.1 DontUse class	254
15.2 CanUse class	254
15.3 ShouldUse class	255
15.4 MustUse class	255
16 Appendices	257
A Integer LBE	257
B The pseudospectral method	258
C A primer on parallel computing	259

CONTENTS

c.1	Fraction of parallel content	260
