Preface and acknowledgements	ix
List of contributors	xi
Table of physical constants and conversion units	xiii
1 Introduction	1
1.1 This Design Guide	1
1.2 Potential applications for metal foams	3
1.3 The literature on metal foams	5
2 Making metal foams	6
2.1 Making metal foams	6
2.2 Melt gas injection (air bubbling)	8
2.3 Gas-releasing particle decomposition in the melt	9
2.4 Gas-releasing particle decomposition in semi-solids	11
2.5 Casting using a polymer or wax precursor as template	11
2.6 Metal decomposition on cellular preforms	14
2.7 Entrapped gas expansion	14
2.8 Hollow sphere structures	16
2.9 Co-compaction or casting of two materials, one leachable	19
2.10 Gas-metal eutectic solidification	20
2.11 Literature on the manufacture of metal foams	20
3 Characterization methods	24
3.1 Structural characterization	24
3.2 Surface preparation and sample size	26
3.3 Uniaxial compression testing	27
3.4 Uniaxial tension testing	29
3.5 Shear testing	30
3.6 Multi-axial testing of metal foams	31
3.7 Fatigue testing	34
3.8 Creep testing	35
3.9 Indentation and hardness testing	35
3.10 Surface strain mapping	36
3.11 Literature on testing of metal foams	38
4 Properties of metal foams	40
4.1 Foam structure	40
4.2 Foam properties: an overview	42

4.3 Foam property charts	48		10.5
4.4 Scaling relations	52		10.6 :
References	54		10.7 :
5 Design analysis for material selection	55		10.8 :
5.1 Background	55		10.9 I
5.2 Formulating a property profile	56		I
5.3 Two examples of single-objective optimization	58		11 Ener
5.4 Where might metal foams excel?	61		11.1 I
References	61		11.2 s
6 Design formulae for simple structures	62		11.3 c
6.1 Constitutive equations for mechanical response	62		11.4 E
6.2 Moments of sections	64		11.5 P
6.3 Elastic deflection of beams and panels	67		11.6 B
6.4 Failure of beams and panels	69		R
6.5 Buckling of columns, panels and shells	70		12 Sound
6.6 Torsion of shafts	72		12.1 Bl
6.7 Contact stresses	74		12.2 Sd
6.8 Vibrating beams, tubes and disks	76		12.3 St
6.9 Creep	78		Rd
References	79		13 Therm
7 A constitutive model for metal foams	80		13.1 Int
7.1 Review of yield behavior of fully dense metals	80		13.2 He
7.2 Yield behavior of metallic foams	82		13.3 He
7.3 Postscript	86		13.4 Prd
References	87		13.5 Trs
8 Design for fatigue with metal foams	88		Ref
8.1 Definition of fatigue terms	88		14 Electric
8.2 Fatigue phenomena in metal foams	90		14.1 Me
8.3 S-N data for metal foams	94		14.2 Dat
8.4 Notch sensitivity in static and fatigue loading	97		14.3 Ele
References	101		Ref
9 Design for creep with metal foams	103		15 Cutting
9.1 Introduction: the creep of solid metals	103		15.1 Cutl
9.2 Creep of metallic foams	105		15.2 Fini
9.3 Models for the steady-state creep of foams	106		15.3 Join
9.4 Creep data for metallic foams	107		Refe
9.5 Creep under multi-axial stresses	109		16 Cost esti
9.6 Creep of sandwich beams with metal foam cores	109		16.1 Intro
References	112		16.2 Tech
10 Sandwich structures	113		16.3 Cost
10.1 The stiffness of sandwich beams	113		16.4 Valud
10.2 The strength of sandwich beams	116		16.5 Appl
10.3 Collapse mechanism maps for sandwich panels	120		Refer
10.4 Case study: the three-point bending of a sandwich panel	123		

10.5	Weight-efficient structures	124
10.6	Illustration for uniformly loaded panel	126
10.7	Stiffness-limited designs	133
10.8	Strength-limited designs	140
10.9	Recommendations for sandwich design	148
	References	148
11	Energy management: packaging and blast protection	150
11.1	Introduction: packaging	150
11.2	Selecting foams for packaging	151
11.3	Comparison of metal foams with tubular energy absorbers	157
11.4	Effect of strain rate on plateau stress	161
11.5	Propagation of shock waves in metal foams	163
11.6	Blast and projectile protection	166
	References	169
12	Sound absorption and vibration suppression	171
12.1	Background: sound absorption in structural materials	171
12.2	Sound absorption in metal foams	173
12.3	Suppression of vibration and resonance	175
	References	179
13	Thermal management and heat transfer	181
13.1	Introduction	181
13.2	Heat transfer coefficient	182
13.3	Heat fluxes	184
13.4	Pressure drop	186
13.5	Trade-off between heat transfer and pressure drop	187
	References	188
14	Electrical properties of metal foams	189
14.1	Measuring electrical conductivity or resistivity	189
14.2	Data for electrical resistivity of metal foams	190
14.3	Electrical conductivity and relative density	191
	References	193
15	Cutting, finishing and joining	194
15.1	Cutting of metal foams	194
15.2	Finishing of metal foams	194
15.3	Joining of metal foams	195
	References	199
16	Cost estimation and viability	200
16.1	Introduction: viability	200
16.2	Technical modeling and performance metrics	201
16.3	Cost modeling	202
16.4	Value modeling	206
16.5	Applications	212
	References	216

17 Case studies	217
17.1 Aluminum foam car body structures	217
17.2 Integrally molded foam parts	219
17.3 Motorway sound insulation	220
17.4 Optical systems for space applications	222
17.5 Fluid-fluid heat exchangers	224
17.6 Lightweight conformal pressure tanks	225
17.7 Electrodes for batteries	225
17.8 Integrated gate bipolar transistors (IGBTs) for motor drives	226
17.9 Applications under consideration	232
18 Suppliers of metal foams	234
19 Web sites	239
Appendix: Catalogue of material indices	242
Index	247
