

Contents

1. Perspectives	1
1.1 The Evolution of Ecosystem Models	1
1.2 The Modeling Process	4
1.3 Narragansett Bay	5
1.3.1 Physical Setting	5
1.3.2 Biology	9
2. The Narragansett Bay Model	14
2.1 General Formulation Strategy	14
2.2 A Conceptual Overview	14

Theoretical Formulations

3. Physical Forcing Functions	23
3.1 Temperature	23
3.2 Solar Radiation	24
3.3 Tidal Circulation	27
3.4 Exchange with Rhode Island Sound	30
3.5 River Flow	35
4. Phytoplankton	37
4.1 Temperature-Growth Relationship	37
4.2 Effects of Nutrients	39
4.3 Effects of Light	44
4.3.1 Theoretical Background	44
4.3.2 Time and Depth Integration of the Steele Equation	48
4.3.3 Light Acclimation and the Selection of I_{opt}	52
4.3.4 Self-Shading and Extinction Coefficient	55
4.3.5 Sinking Rate	56
4.4 Two Phytoplankton Species Groups	57
5. Zooplankton	60
5.1 General Background	60
5.2 Ingestion	62
5.2.1 Ration, Filtering Rate, and Experimental Observations	64
5.2.2 The Maximum Ration	67
5.2.3 Reducing the Maximum Ration	69

Contents

5.2.4	Cannibalism	73
5.3	Assimilation	74
5.4	Respiration	76
5.5	Excretion	79
5.6	Reproduction	83
5.7	Egg Hatching Time	85
5.8	Juvenile Development	86
5.8.1	Growth Rate of Juveniles	87
5.8.2	Development Time	88
5.8.3	Food Limitation	89
6.	Additional Compartments	91
6.1	Carnivorous Zooplankton	91
6.2	Adult Fish and Higher Trophic Levels	94
6.3	The Benthos	96
6.3.1	Grazing by Clams	96
6.3.2	Nutrient Regeneration	100
6.4	Nutrients	101
 Simulation and Analysis		
7.	Mathematical Considerations and the Computer Program	107
7.1	Instantaneous Rates, Finite-Interval Rates, and Integration	107
7.2	Developing the Computer Program	112
7.2.1	General Comments	112
7.2.2	Digital Computer Simulation	113
7.2.3	The Narragansett Bay Computer Program	115
8.	The Tidal Mixing Model	126
9.	The Standard Run	131
9.1	Selection of Parameters	131
9.2	Zooplankton	132
9.3	Phytoplankton	133
9.4	General Description	135
9.5	Rates and Mechanisms	147
9.6	Relative Role of Nutrients and Grazing in Phytoplankton Control	154
9.7	Zooplankton Excretion and Benthic Fluxes	157
9.8	Metabolic Carbon Budgets for Zooplankton	157
9.9	Annual Integrals	159
10.	The Role of Biological Detail	164
10.1	Light Optima and Acclimation	164
10.2	The "Most Limiting" Nutrient	167
10.3	Two Species Groups and Luxury Nutrient Kinetics	168
10.4	Juvenile Zooplankton and Cannibalism	170
10.5	The Role of Carnivores	173

11. Sensitivity and Stability	177
11.1 Sensitivity Analysis	177
11.1.1 Initial Conditions	177
11.1.2 Hydrodynamic Characteristics	178
11.1.3 Extinction Coefficient	179
11.1.4 Phytoplankton	181
11.1.5 Zooplankton	184
11.1.6 Seasonal Cycles	186
11.1.7 General Implications and the Role of Sensitivity Analysis	188
11.1.8 A Note on Numerical Stability	190
12. Applications and Limitations	193
12.1 Ecosystem Modeling and Environmental Management	193
12.2 Holism and Reductionism	198
