

# Contents

Preface xi

## 1 An Overview and Brief History of Feedback Control 1

Chapter Overview 1

A Perspective on Feedback Control 1

- 1.1 A Simple Feedback System 2
  - 1.2 A First Analysis of Feedback 6
  - 1.3 A Brief History 9
  - 1.4 An Overview of the Book 15
- Summary 17
- Review Questions 18
- Problems 18

## 2 Dynamic Models 22

Chapter Overview 22

A Perspective on Dynamic Models 23

- 2.1 Dynamics of Mechanical Systems 24
  - 2.2 Differential Equations in State-Variable Form 41
  - 2.3 Models of Electric Circuits 46
  - 2.4 Models of Electromechanical Systems 51
  - 2.5 Heat- and Fluid-Flow Models 57
  - 2.6 Linearization and Scaling 68
- Summary 77
- Review Questions 78
- Problems 78

### **3 Dynamic Response 94**

Chapter Overview 94

A Perspective on System Response 95

3.1 Review of Laplace Transforms 96

3.2 System Modeling Diagrams 123

3.3 Effect of Pole Locations 135

3.4 Time-Domain Specifications 144

3.5 Effects of Zeros and Additional Poles 150

3.6 Stability 157

▲ 3.7 Numerical Simulation 167

▲ 3.8 Obtaining Models from Experimental Data 173

Summary 179

Review Questions 181

Problems 181

### **4 Basic Properties of Feedback 200**

Chapter Overview 200

A Perspective on Properties of Feedback 201

4.1 A Case Study of Speed Control 202

4.2 The Classical Three-Term Controller 215

4.3 Steady-State Tracking and System Type 230

4.4 Digital Implementation of Controllers 245

Summary 251

Review Questions 252

Problems 253

### **5 The Root-Locus Design Method 270**

### 3 Dynamic Response 94

Chapter Overview 94

A Perspective on System Response 95

3.1 Review of Laplace Transforms 96

3.2 System Modeling Diagrams 123

3.3 Effect of Pole Locations 135

3.4 Time-Domain Specifications 144

3.5 Effects of Zeros and Additional Poles 150

3.6 Stability 157

▲ 3.7 Numerical Simulation 167

▲ 3.8 Obtaining Models from Experimental Data 173

Summary 179

Review Questions 181

Problems 181

### 4 Basic Properties of Feedback 200

Chapter Overview 200

A Perspective on Properties of Feedback 201

4.1 A Case Study of Speed Control 202

4.2 The Classical Three-Term Controller 215

4.3 Steady-State Tracking and System Type 230

4.4 Digital Implementation of Controllers 245

Summary 251

Review Questions 252

Problems 253

### 5 The Root-Locus Design Method 270

Chapter Overview 270

A Perspective on the Root-locus Design Method 271

5.1 Root Locus of a Basic Feedback System 272

5.2 Guidelines for Sketching a Root Locus 277

▲ 5.3 Selected Illustrative Root Loci 293

▲ 5.4 Selecting the Parameter Value 307

5.5 Dynamic Compensation 310

5.6 A Design Example Using the Root Locus 322

5.7 Extensions of the Root-Locus Method 329

Summary 341

Review Questions 343

## 6 The Frequency-Response Design Method 364

Chapter Overview 364

A Perspective on the Frequency-response Design Method 365

6.1 Frequency Response 366

6.2 Neutral Stability 387

6.3 The Nyquist Stability Criterion 390

6.4 Stability Margins 403

6.5 Bode's Gain-Phase Relationship 411

6.6 Closed-Loop Frequency Response 415

6.7 Compensation 417

▲ 6.8 Alternate Presentations of Data 443

▲ 6.9 Specifications in Terms of the Sensitivity Function 448

▲ 6.10 Time Delay 457

▲ 6.11 Obtaining a Pole-Zero Model from Frequency-Response Data 459

Summary 462

Review Questions 464

Problems 465

## 7 State-Space Design 492

Chapter Overview 492

A Perspective on State-Space Design 493

7.1 Advantages of State Space 494

7.2 Analysis of the State Equations 495

7.3 Control-Law Design for Full-State Feedback 515

7.4 Selection of Pole Locations for Good Design 529

7.5 Estimator Design 541

7.6 Compensator Design: Combined Control Law and Estimator 555

▲ 7.7 Loop Transfer Recovery (LTR) 569

7.8 Introduction of the Reference Input with the Estimator 574

7.9 Integral Control and Robust Tracking 586

▲ 7.10 Direct Design with Rational Transfer Functions 604

▲ 7.11 Design for Systems with Pure Time Delay 608

▲ 7.12 Lyapunov Stability 614

Summary 618

Review Questions 622

Problems 622

## 8 Digital Control 646

Chapter Overview 646

A Perspective on Digital Control 647

8.1 Digitization 648

8.2 Dynamic Analysis of Discrete Systems 650

8.3	Design by Emulation	658
8.4	Discrete Design	668
8.5	State-Space Design Methods	676
8.6	Hardware Characteristics	683
8.7	Word-Size Effects	686
8.8	Sample-Rate Selection	689
	Summary	692
	Review Questions	694
	Problems	694
<b>9</b>	<b>Control-System Design: Principles and Case Studies</b>	<b>706</b>
	Chapter Overview	706
	A Perspective on Design Principles	707
9.1	An Outline of Control Systems Design	708
9.2	Design of a Satellite's Attitude Control	714
9.3	Lateral and Longitudinal Control of a Boeing 747	733
9.4	Control of the Fuel–Air Ratio in an Automotive Engine	752
9.5	Control of a Digital Tape Transport	759
9.6	Control of the Read/Write Head Assembly of a Hard Disk	770
9.7	Control of Rapid Thermal Processing (RTP) Systems in Semiconductor Manufacturing	781
	Summary	795
	Review Questions	797
	Problems	797
<b>Appendix A</b>	<b>Laplace Transforms</b>	<b>811</b>
A.1	The $\mathcal{L}$ -Laplace Transform	811
<b>Appendix B</b>	<b>A Review of Complex Variables</b>	<b>825</b>
B.1	Definition of a Complex Number	825
B.2	Algebraic Manipulations	827
B.3	Graphical Evaluation of Magnitude and Phase	829
B.4	Differentiation and Integration	830
B.5	Euler's Relations	831
B.6	Analytic Functions	832
B.7	Cauchy's Theorem	832
B.8	Singularities and Residues	832
B.9	Residue Theorem	833
B.10	The Argument Principle	834
<b>Appendix C</b>	<b>Summary of Matrix Theory</b>	<b>837</b>
C.1	Matrix Definitions	837

C.2	Elementary Operations on Matrices	838
C.3	Trace	839
C.4	Transpose	839
C.5	Determinant and Matrix Inverse	839
C.6	Properties of the Determinant	840
C.7	Inverse of Block Triangular Matrices	841
C.8	Special Matrices	841
C.9	Rank	842
C.10	Characteristic Polynomial	842
C.11	Cayley–Hamilton Theorem	843
C.12	Eigenvalues and Eigenvectors	843
C.13	Similarity Transformations	844
C.14	Matrix Exponential	845
C.15	Fundamental Subspaces	845
C.16	Singular-Value Decomposition	846
C.17	Positive Definite Matrices	847
C.18	Matrix Identity	847
<b>Appendix D</b>	<b>Controllability and Observability</b>	<b>849</b>
D.1	Controllability	850
D.2	Observability	855
<b>Appendix E</b>	<b>Ackermann’s Formula for Pole Placement</b>	<b>857</b>
<b>Appendix F</b>	<b>MATLAB Commands</b>	<b>861</b>
<b>Appendix G</b>	<b>Solutions to Review Questions</b>	<b>863</b>
	<b>References</b>	<b>879</b>
	<b>Index</b>	<b>887</b>
