Preface	vii
<b>I Introduction</b>	<b>1</b>
<b>1 Introduction</b>	<b>3</b>
1.1 Models in Mathematical Biology . . . . .	3
1.2 Ordinary Language Models . . . . .	5
1.2.1 Qualifications . . . . .	7
1.2.2 Dale's Principle . . . . .	9
1.3 Weakness of Synaptic Connections . . . . .	11
1.3.1 How Small Is $\epsilon$ ? . . . . .	11
1.3.2 Size of PSP . . . . .	12
1.3.3 A Common Misinterpretation . . . . .	15
1.3.4 Spike Delays . . . . .	16
1.3.5 Changes of Synaptic Efficacy . . . . .	17
1.4 Empirical Models . . . . .	18
1.4.1 Activities of Neurons . . . . .	19
1.4.2 Redundancy of the Brain . . . . .	20
1.4.3 Additive Neural Network . . . . .	21
1.4.4 Wilson-Cowan Model . . . . .	23
<b>2 Bifurcations in Neuron Dynamics</b>	<b>25</b>
2.1 Basic Concepts of Dynamical System Theory . . . . .	25

2.1.1	Dynamical Systems . . . . .	26
2.2	Local Bifurcations . . . . .	32
2.2.1	Saddle-Node . . . . .	32
2.2.2	The Cusp . . . . .	38
2.2.3	The Pitchfork . . . . .	41
2.2.4	Andronov-Hopf . . . . .	42
2.2.5	Bogdanov-Takens . . . . .	48
2.2.6	Quasi-Static Bifurcations . . . . .	50
2.3	Bifurcations of Mappings . . . . .	54
2.3.1	Poincaré Mappings . . . . .	55
2.3.2	Time- $T$ (Stroboscopic) Mappings . . . . .	56
2.3.3	Periodically Forced Brain Systems . . . . .	57
2.3.4	Periodically Forced Additive Neuron . . . . .	58
2.3.5	Saddle-Node Bifurcation . . . . .	60
2.3.6	Flip Bifurcation . . . . .	61
2.3.7	Secondary Andronov-Hopf Bifurcation . . . . .	63
2.4	Codimension of Bifurcations . . . . .	65
2.5	Multidimensional Systems . . . . .	67
2.6	Soft and Hard Loss of Stability . . . . .	68
2.7	Global Bifurcations . . . . .	71
2.7.1	Saddle-Node on Limit Cycle . . . . .	72
2.7.2	Saddle Separatrix Loop . . . . .	76
2.7.3	Double Limit Cycle . . . . .	79
2.8	Spiking . . . . .	82
2.8.1	Class 1 Neural Excitability . . . . .	85
2.8.2	Class 2 Neural Excitability . . . . .	88
2.8.3	Amplitude of an Action Potential . . . . .	89
2.9	Bursting . . . . .	90
2.9.1	Slow Subsystem . . . . .	91
2.9.2	Parabolic Bursting . . . . .	93
2.9.3	Square-Wave Bursting . . . . .	96
2.9.4	Elliptic Bursting . . . . .	96
2.9.5	Other Types of Bursting . . . . .	99
<b>3</b>	<b>Neural Networks</b> . . . . .	<b>103</b>
3.1	Nonhyperbolic Neural Networks . . . . .	103
3.1.1	The Olfactory Bulb . . . . .	105
3.1.2	Generalizations . . . . .	106
3.2	Neural Network Types . . . . .	108
3.2.1	Multiple Attractor NN . . . . .	109
3.2.2	Globally Asymptotically Stable NN . . . . .	109
3.2.3	Nonhyperbolic NN . . . . .	110
<b>4</b>	<b>Introduction to Canonical Models</b> . . . . .	<b>111</b>
4.1	Introduction . . . . .	112

4.1.1	Families of Dyna . . . . .
4.1.2	Observations . . . . .
4.1.3	Models . . . . .
4.1.4	Canonical Mode . . . . .
4.1.5	Example: Linear . . . . .
4.1.6	Example: The V . . . . .
4.1.7	Example: Phase . . . . .
4.2	Normal Forms . . . . .
4.2.1	Example: Norma . . . . .
4.2.2	Normal Forms A . . . . .
4.3	Normally Hyperbolic In . . . . .
4.3.1	Invariant Manifo . . . . .
4.3.2	Normal Hyperbo . . . . .
4.3.3	Stable Submani . . . . .
4.3.4	Invariant Foliati . . . . .
4.3.5	Asymptotic Pha . . . . .
4.3.6	Center Manifold . . . . .
4.3.7	Direct Product . . . . .
4.3.8	Weakly Connect . . . . .

## II Derivation of Canon

### 5 Local Analysis of WCNN

5.1	Hyperbolic Equilibria . . . . .
5.2	Nonhyperbolic Equilibria . . . . .
5.2.1	The Center Man . . . . .
5.3	Multiple Saddle-Node, . . . . .
5.3.1	Adaptation Cor . . . . .
5.3.2	Multiple Saddle . . . . .
5.3.3	Multiple Cusp I . . . . .
5.3.4	Multiple Pitchfo . . . . .
5.3.5	Example: The A . . . . .
5.3.6	Time-Depender . . . . .
5.3.7	Variables and P . . . . .
5.3.8	Adaptation Cor . . . . .
5.4	Multiple Andronov-Ho . . . . .
5.4.1	Ginzburg-Land . . . . .
5.4.2	Equality of Fre . . . . .
5.4.3	Distinct Freque . . . . .
5.4.4	Distance to an . . . . .
5.4.5	Time-Depender . . . . .
5.5	Multiple Bogdanov-Ta . . . . .
5.5.1	Violation of Ad . . . . .
5.5.2	Other Choices . . . . .

4.1.1	Families of Dynamical Systems . . . . .	112
4.1.2	Observations . . . . .	114
4.1.3	Models . . . . .	114
4.1.4	Canonical Models . . . . .	117
4.1.5	Example: Linear Systems . . . . .	118
4.1.6	Example: The VCON . . . . .	119
4.1.7	Example: Phase Oscillators . . . . .	120
4.2	Normal Forms . . . . .	122
4.2.1	Example: Normal Form for Andronov-Hopf Bifurcation	125
4.2.2	Normal Forms Are Canonical Models . . . . .	126
4.3	Normally Hyperbolic Invariant Manifolds . . . . .	126
4.3.1	Invariant Manifolds . . . . .	126
4.3.2	Normal Hyperbolicity . . . . .	127
4.3.3	Stable Submanifolds . . . . .	130
4.3.4	Invariant Foliation . . . . .	131
4.3.5	Asymptotic Phase . . . . .	131
4.3.6	Center Manifold Restrictions Are Local Models . . . . .	135
4.3.7	Direct Product of Dynamical Systems . . . . .	135
4.3.8	Weakly Connected Systems . . . . .	138

**II Derivation of Canonical Models 141**

<b>5</b>	<b>Local Analysis of WCNNs</b>	<b>143</b>
5.1	Hyperbolic Equilibria . . . . .	144
5.2	Nonhyperbolic Equilibrium . . . . .	146
5.2.1	The Center Manifold Reduction . . . . .	146
5.3	Multiple Saddle-Node, Pitchfork, and Cusp Bifurcations . . . . .	151
5.3.1	Adaptation Condition . . . . .	151
5.3.2	Multiple Saddle-Node Bifurcation . . . . .	152
5.3.3	Multiple Cusp Bifurcation . . . . .	154
5.3.4	Multiple Pitchfork Bifurcation . . . . .	155
5.3.5	Example: The Additive Model . . . . .	155
5.3.6	Time-Dependent External Input $\rho$ . . . . .	159
5.3.7	Variables and Parameters . . . . .	161
5.3.8	Adaptation Condition . . . . .	162
5.4	Multiple Andronov-Hopf Bifurcation . . . . .	164
5.4.1	Ginzburg-Landau (Kuramoto-Tsuzuki) Equation . . . . .	169
5.4.2	Equality of Frequencies and Interactions . . . . .	169
5.4.3	Distinct Frequencies . . . . .	171
5.4.4	Distance to an Andronov-Hopf bifurcation . . . . .	174
5.4.5	Time-Dependent External Input $\rho$ . . . . .	175
5.5	Multiple Bogdanov-Takens Bifurcations . . . . .	181
5.5.1	Violation of Adaptation Condition . . . . .	183
5.5.2	Other Choices of $\lambda$ and $\rho$ . . . . .	185

5.6	Codimensions of Canonical Models . . . . .	187
<b>6</b>	<b>Local Analysis of Singularly Perturbed WCNNs</b>	<b>189</b>
6.1	Introduction . . . . .	190
6.1.1	Motivational Examples . . . . .	190
6.2	Reduction to the Regular Perturbation Problem . . . . .	192
6.3	Center Manifold Reduction . . . . .	193
6.4	Preparation Lemma . . . . .	195
6.5	The Case $\mu = \mathcal{O}(\varepsilon)$ . . . . .	197
6.5.1	The Case $\dim y_i = 1$ . . . . .	198
6.6	Multiple Quasi-Static Andronov-Hopf Bifurcations . . . . .	199
6.7	The Case $\mu = \mathcal{O}(\varepsilon^2)$ . . . . .	200
6.7.1	Multiple Quasi-Static Saddle-Node Bifurcations . . . . .	200
6.7.2	Multiple Quasi-Static Pitchfork Bifurcations . . . . .	202
6.7.3	Multiple Quasi-Static Cusp Bifurcations . . . . .	204
6.8	The Case $\mu = \mathcal{O}(\varepsilon^k)$ , $k > 2$ . . . . .	204
6.9	Conclusion . . . . .	205
6.9.1	Synaptic Organizations of the Brain . . . . .	205
<b>7</b>	<b>Local Analysis of Weakly Connected Maps</b>	<b>209</b>
7.1	Weakly Connected Mappings . . . . .	210
7.2	Hyperbolic Fixed Points . . . . .	211
7.3	Nonhyperbolic Fixed Points . . . . .	211
7.3.1	Multiple Saddle-Node Bifurcations . . . . .	212
7.3.2	Multiple Flip Bifurcations . . . . .	214
7.3.3	Multiple Secondary Andronov-Hopf Bifurcations . . . . .	215
7.4	Connection with Flows . . . . .	216
<b>8</b>	<b>Saddle-Node on a Limit Cycle</b>	<b>219</b>
8.1	One Neuron . . . . .	220
8.1.1	Saddle-Node Point on a Limit Cycle . . . . .	220
8.1.2	Saddle-Node Bifurcation on a Limit Cycle . . . . .	225
8.1.3	Analysis of the Canonical Model . . . . .	227
8.1.4	Parabolic Burster . . . . .	229
8.2	Network of Neurons . . . . .	231
8.2.1	Size of PSP . . . . .	232
8.2.2	Adaptation Condition Is Violated . . . . .	234
8.2.3	Parabolic Bursting Revisited . . . . .	237
8.3	Adaptation Condition Is Satisfied . . . . .	241
8.3.1	Integrate-and-Fire Model . . . . .	242
<b>9</b>	<b>Weakly Connected Oscillators</b>	<b>247</b>
9.1	Introduction . . . . .	248
9.2	Phase Equations . . . . .	253
9.2.1	Malkin's Theorem for Weakly Connected Oscillators . . . . .	255

9.2.2	Example: Coupled . . . . .	
<b>9.3</b>	<b>Averaging the Phase Equations</b>	
9.3.1	Averaging Theory . . . . .	
9.3.2	Resonant Relations . . . . .	
9.3.3	Generalized Fourier Series . . . . .	
9.3.4	Nonresonant $\Omega$ . . . . .	
9.3.5	Resonant $\Omega$ . . . . .	
9.3.6	A Neighborhood of Resonance . . . . .	
<b>9.4</b>	<b>Conventional Synaptic Coupling</b>	
9.4.1	Synaptic Glomerations . . . . .	
9.4.2	Phase Equations . . . . .	
9.4.3	Commensurable Frequencies . . . . .	
9.4.4	Example: A Pair of Oscillators . . . . .	
9.4.5	Example: A Chain of Oscillators . . . . .	
9.4.6	Oscillatory Association . . . . .	
9.4.7	Kuramoto's Model . . . . .	
<b>9.5</b>	<b>Time-Dependent External Input</b>	
9.5.1	Conventional Synaptic Coupling . . . . .	
<b>9.6</b>	<b>Appendix: The Malkin Theorem</b>	

### III Analysis of Canonical Models

#### 10 Multiple Andronov-Hopf Bifurcations

10.1	Preliminary Analysis . . . . .
10.1.1	A Single Oscillator . . . . .
10.1.2	Complex Synaptic Coupling . . . . .
10.2	Oscillator Death and Self-Excitation . . . . .
10.3	Synchronization of Two Oscillators . . . . .
10.4	Oscillatory Associative Memory . . . . .

#### 11 Multiple Cusp Bifurcations

11.1	Preliminary Analysis . . . . .
11.1.1	Global behavior . . . . .
11.1.2	Strong Input from a Single Oscillator . . . . .
11.1.3	Extreme Psychological States . . . . .
11.2	Canonical Model as a Generalization of the Parabolic Burster . . . . .
11.3	Canonical Model as an Associative Memory . . . . .
11.4	Learning . . . . .
11.4.1	Learning Rule for a Single Oscillator . . . . .
11.4.2	Learning Rule for a Chain of Oscillators . . . . .
11.5	Multiple Pitchfork Bifurcations . . . . .
11.5.1	Stability of the Oscillator . . . . .
11.5.2	Stability of the Chain . . . . .
11.6	Bifurcations for $r \neq 0$ (T) . . . . .

9.2.2	Example: Coupled Wilson-Cowan Neural Oscillators	260
9.3	Averaging the Phase Equations	262
9.3.1	Averaging Theory	263
9.3.2	Resonant Relations	265
9.3.3	Generalized Fourier Series	267
9.3.4	Nonresonant $\Omega$	269
9.3.5	Resonant $\Omega$	271
9.3.6	A Neighborhood of Resonant $\Omega$	273
9.4	Conventional Synaptic Connections	273
9.4.1	Synaptic Glomeruli	274
9.4.2	Phase Equations	275
9.4.3	Commensurable Frequencies and Interactions	277
9.4.4	Example: A Pair of Oscillators	279
9.4.5	Example: A Chain of Oscillators	282
9.4.6	Oscillatory Associative Memory	285
9.4.7	Kuramoto's Model	287
9.5	Time-Dependent External Input $\rho$	288
9.5.1	Conventional Synapses	290
9.6	Appendix: The Malkin Theorem	292

**III Analysis of Canonical Models 295**

**10 Multiple Andronov-Hopf Bifurcation 297**

10.1	Preliminary Analysis	297
10.1.1	A Single Oscillator	298
10.1.2	Complex Synaptic Coefficients $c_{ij}$	300
10.2	Oscillator Death and Self-Ignition	302
10.3	Synchronization of Two Identical Oscillators	305
10.4	Oscillatory Associative Memory	308

**11 Multiple Cusp Bifurcation 311**

11.1	Preliminary Analysis	311
11.1.1	Global behavior	312
11.1.2	Strong Input from Receptors	314
11.1.3	Extreme Psychological Condition	314
11.2	Canonical Model as a GAS-Type NN	316
11.3	Canonical Model as an MA-Type NN	317
11.4	Learning	319
11.4.1	Learning Rule for Coefficient $c_{ij}$	319
11.4.2	Learning Rule for Matrix $C$	320
11.5	Multiple Pitchfork Bifurcation	321
11.5.1	Stability of the Origin	322
11.5.2	Stability of the Other Equilibria	323
11.6	Bifurcations for $r \neq 0$ (Two Memorized Images)	326

11.6.1	The Reduction Lemma . . . . .	327
11.6.2	Recognition: Only One Image Is Presented . . . . .	329
11.6.3	Recognition: Two Images Are Presented . . . . .	331
11.7	Bistability of Perception . . . . .	332
11.8	Quasi-Static Variation of a Bifurcation Parameter . . . . .	334
<b>12</b>	<b>Quasi-Static Bifurcations</b>	<b>337</b>
12.1	Stability of the Equilibrium . . . . .	337
12.2	Dale's Principle and Synchronization . . . . .	339
12.3	Further Analysis of the Andronov-Hopf Bifurcation . . . . .	342
12.4	Nonhyperbolic Neural Networks . . . . .	343
12.5	Problem 1 . . . . .	344
12.6	Problems 2 and 3 . . . . .	346
12.7	Proofs of Theorems 12.4 and 12.6 . . . . .	347
12.7.1	Proof of Theorem 12.4 . . . . .	348
12.7.2	Proof of Theorem 12.6 . . . . .	349
<b>13</b>	<b>Synaptic Organizations of the Brain</b>	<b>353</b>
13.1	Introduction . . . . .	353
13.2	Neural Oscillators . . . . .	355
13.3	Multiple Andronov-Hopf Bifurcation . . . . .	356
13.3.1	Converted Synaptic Coefficients . . . . .	358
13.3.2	Classification of Synaptic Organizations . . . . .	359
13.3.3	Synchronization of Two Identical Neural Oscillators . . . . .	362
13.4	Learning Dynamics . . . . .	365
13.4.1	Memorization of Phase Information . . . . .	367
13.4.2	Synaptic Organizations and Phase Information . . . . .	372
13.5	Limit Cycle Neural Oscillators . . . . .	375
13.5.1	Phase Equations . . . . .	375
13.5.2	Synchronization of Two Identical Oscillators . . . . .	377
