

CONTENTS

1.	INTRODUCTION	1
2.	SUMMARY OF THE ACHIEVEMENTS OF THE CRP	3
2.1.	Thallium-201	4
2.2.	Iodine-123 and Iodine-124	5
2.3.	Palladium-103	6
3.	OUTPUTS AND OUTCOMES OF THE CRP	8
3.1.	Results	8
3.1.1.	Thallium-201	9
3.1.2.	Palladium-103	9
3.1.3.	Iodine-123	10
3.2.	Outcomes	10
4.	OPTIMIZATION OF THE PLATING TECHNOLOGY, COOLING AND IRRADIATION MODE OF ELECTROPLATED SOLID TARGETS, AND QUALITY CONTROL OF SOLID TARGETS	11
4.1.	Introduction	11
4.2.	Quality requirements and optimization of the electroplating technology	11
4.2.1.	Quality requirements and industrial demands	11
4.2.2.	Optimization of the plating technology	12
4.3.	Quality control of electroplated targets	17
4.4.	Optimization of the cooling and irradiation mode	18
4.4.1.	Optimization of the cooling	18
4.4.2.	Optimization of the irradiation mode: Circular wobbling of the beam	21
4.5.	Conclusions of Section 4	24
5.	RESULTS OF THE WORK ON TARGET FABRICATION FOR ^{123}I AND ^{124}I PRODUCTION	25
5.1.	Introduction	25
5.2.	Target fabrication	27

5.2.1.	Electroplated Te targets	27
5.2.2.	Oxide targets	29
5.3.	Target irradiation	31
5.3.1.	Plated target irradiation	31
5.3.2.	Oxide target	32
5.4.	Target processing	32
5.4.1.	Electroplated target	32
5.4.2.	Oxide targets	33
5.5.	Target quality control	33
5.5.1.	Electroplated Te targets	33
5.5.2.	Tellurium dioxide targets	33
5.5.3.	Iodine batch quality control	34
5.6.	Conclusions of Section 5	34
6.	RESULTS OF THE WORK ON TARGET FABRICATION FOR ¹⁰³Pd PRODUCTION	35
6.1.	Introduction	35
6.2.	Target fabrication	36
6.2.1.	Target preparation from home-made sulphate plating baths	36
6.2.2.	Target preparation from home-made chloride plating baths	39
6.2.3.	Other solid rhodium targets	40
6.3.	Irradiation of electroplated rhodium targets	40
6.4.	Target processing	41
6.4.1.	Centrifugal electrodisolution technology	41
6.4.2.	Separation of carrier free ¹⁰³ Pd	44
6.5.	Quality control	45
6.5.1.	Target quality control	45
6.5.2.	Radiochemical quality control	46
6.6.	Conclusions of Section 6	46
7.	RESULTS OF THE WORK ON TARGET FABRICATION FOR ²⁰¹Tl PRODUCTION	47
7.1.	Introduction	47
7.2.	Target fabrication	48
7.2.1.	Preparation of the alkaline EDTA plating solution.	48
7.2.2.	Simultaneous plating of four 78 μm thallium target layers (surface area 11.69 m ²)	50

7.2.3.	Preparation of the second (to the tenth) plating bath . . .	52
7.2.4.	Optimum current density range and Cc	52
7.2.5.	Recovery of enriched thallium	53
7.3.	Irradiation of electroplated thallium targets	56
7.4.	Target processing	57
7.5.	Quality control	59
7.5.1.	Target quality control	59
7.5.2.	Thallium-201 quality control.	59
7.6.	Conclusions of Section 7	60
8.	PLANNING AND OPTIMIZATION OF IRRADIATION CONDITIONS FOR RADIOISOTOPE PRODUCTION USING NUCLEAR DATA	61
8.1.	Introduction	61
8.2.	Calculation of the total absolute activity	62
8.3.	Production of iodine radioisotopes on Te or TeO ₂ targets	62
8.4.	Production of the ¹⁰³ Pd radioisotope	64
8.5.	Production of the ²⁰¹ Tl radioisotope	64
9.	POSSIBLE AREAS OF FURTHER RESEARCH	64
	REFERENCES	67
	BIBLIOGRAPHY	69
	CONTRIBUTORS TO DRAFTING AND REVIEW	71
