

CONTENTS

1.	INTRODUCTION	1
1.1.	Background	1
1.2.	Scope	6
1.3.	Structure	6
2.	DISPERSED RADIOACTIVE CONTAMINATION	6
3.	FACTORS INFLUENCING TECHNOLOGY SELECTION	8
3.1.	Fundamental technical choices	8
3.2.	Technology sources	10
3.3.	Effectiveness	11
3.4.	Cost	12
3.5.	Occupational safety and health	12
3.6.	Secondary environmental impacts	13
3.7.	Prior experience	13
3.8.	Socioeconomic considerations	14
4.	NON-INTERVENTION	14
4.1.	Basic considerations	14
4.2.	Dilution and dispersion	15
4.3.	Natural attenuation	15
4.3.1.	Principles	15
4.3.2.	Physical processes	16
4.3.2.1.	Radioactive decay	16
4.3.2.2.	Filtration	16
4.3.2.3.	Volatilization	16
4.3.3.	Chemical processes	18
4.3.3.1.	Precipitation	18
4.3.3.2.	Co-precipitation	18
4.3.3.3.	Sorption	19
4.3.3.4.	Complexation by organics	19
4.3.4.	Biological processes	20
4.3.5.	Definitions and applicability	20
4.4.	Alternative land uses	21
4.5.	Agricultural countermeasures	26

5.	CONTAINMENT	29
5.1.	Enhanced attenuation	29
5.2.	Low permeability barriers	30
5.3.	Permeable reactive barriers	31
5.4.	Immobilization	38
5.5.	Biological barrier walls (biowalls)	40
5.6.	Phytostabilization	42
5.7.	Constructed wetlands	45
6.	REMOVAL	49
6.1.	Preconditions and constraints	49
6.2.	Immobilization and solidification (ex situ)	49
6.3.	Surface and groundwaters: pump and treat	50
6.4.	Enhanced recovery	52
6.5.	Chemical extraction (ex situ)	54
6.6.	Hydrometallurgical methods	55
6.7.	Segregation	56
6.8.	Biosorption	56
6.9.	Bioleaching	59
6.10.	Phytoextraction	63
6.10.1.	Overview	63
6.10.2.	Uranium removal	67
6.10.3.	Strontium removal	68
6.10.4.	Caesium removal	69
6.10.5.	Phytoextraction project in Belarus	71
6.11.	Rhizofiltration	72
7.	SUMMARY AND CONCLUSIONS	75
	REFERENCES	79
	GLOSSARY	115
	CONTRIBUTORS TO DRAFTING AND REVIEW	117
