Contents in Detail

	Contents in Brief		vii
	Preface		xxi
	List of Symbols, Units, and Physical Constants		xxv
1	**Introduction**		1
2	**Ion Movement in Excitable Cells**		9
	2.1	Introduction	9
	2.2	Physical laws that dictate ion movement	10
	2.2.1	Fick's law for diffusion	10
	2.2.2	Ohm's law for drift	11
	2.2.3	The Einstein relation between diffusion and mobility	11
	2.2.4	Space-charge neutrality	11
	2.3	The Nernst-Planck equation (NPE)	14
	2.4	The Nernst equation	15
	2.5	Ion distribution and gradient maintenance	17
	2.5.1	Active transport of ions	18
	2.5.2	Passive distribution of ions and Donnan equilibrium	19
	2.6	Effects of Cl^- and K^+ on membrane voltage	22
	2.7	Movement of ions across biological membranes	24
	2.7.1	Membrane permeability	24
	2.7.2	The Goldman-Hodgkin-Katz (GHK) model	26
	2.7.3	Applications of GHK equations	30

2.7.3.1	Resting potential	30
2.7.3.2	Action potential	32
2.7.3.3	Effects of electrogenic pumps on membrane potential	32
2.8	Review of important concepts	33
2.9	Homework problems	33
3	**Electrical Properties of the Excitable Membrane**	39
3.1	Equivalent circuit representation	39
3.2	Membrane conductance	41
3.2.1	Linear membrane	41
3.2.2	Nonlinear membrane	42
3.3	Ionic conductances	46
3.4	The parallel conductance model	47
3.5	Current-voltage relations	49
3.6	Review of important concepts	51
3.7	Homework problems	51
4	**Functional Properties of Dendrites**	55
4.1	Introduction	55
4.2	Significance of electrotonic properties of neurons	55
4.3	Isopotential cell (sphere)	60
4.4	Nonisopotential cell (cylinder)	62
4.4.1	Units and definitions	65
4.4.2	Solutions of cable equations	66
4.4.2.1	Infinite cable, current step	67
4.4.2.2	Finite cable, current step	75
4.5	Rall model for neurons	85
4.5.1	Derivation of the model	85
4.5.1.1	Equivalent (semi-infinite) cylinder	86
4.5.1.2	Equivalent (finite) cylinder	89
4.5.1.3	Finite cylinder with lumped soma	90
4.5.2	Experimental determination of L, ρ, and τ_m	92

4.5.3	Application to synaptic inputs	98
4.6	Two-port network analysis of electrotonic structure	102
4.7	Summary of important concepts	107
4.8	Derivation of the input conductance of a finite-length cable	107
4.9	Derivation of potential distribution along finite cable attached to lumped soma	108
4.10	Homework problems	109
5	**Nonlinear Properties of Excitable Membranes**	121
5.1	Introduction	121
5.2	Membrane rectification	121
5.3	Models for membrane rectification	122
5.3.1	Constant field (GHK) model	123
5.3.2	Energy barrier model (Eyring rate theory)	124
5.3.3	The gate model (Hodgkin and Huxley's model)	130
5.3.3.1	Voltage dependence	131
5.3.3.2	Time dependence	133
5.4	Review of important concepts	136
5.5	Homework problems	137
6	**Hodgkin and Huxley's Analysis of the Squid Giant Axon**	143
6.1	Introduction	143
6.2	Voltage-clamp experiments of the squid axon	143
6.2.1	Voltage-clamp systems and reasons for voltage clamping	143
6.2.2	Voltage-clamp records	144
6.2.3	Instantaneous current-voltage relation	145
6.2.4	g_{Na} and g_K of the squid axon	148
6.3	Hodgkin and Huxley's model	149
6.4	Nonpropagating and propagating action potentials	155
6.4.1	Hodgkin and Huxley equations for nonpropagating and propagating action potentials	155

6.4.2 Variations in voltage and currents during nonpropagating and propagating action potentials 157
6.5 Noble's model for nerve excitation: simplified *I-V* relations 159
6.6 Gating current 161
6.7 Review of important concepts 170
6.8 Homework problems 171

7 Functional Diversity of Voltage-Gated Ionic Conductances 183
7.1 Introduction 183
7.2 Cellular distribution of ion channels 184
7.3 Propagation of the action potential in myelinated axons 185
7.4 Properties of different membrane currents 187
7.4.1 Sodium currents $I_{Na(\text{fast})}$ and $I_{Na(\text{slow})}$ 188
7.4.2 Calcium currents 192
7.4.2.1 High-threshold calcium current $I_{Ca(L)}$ 193
7.4.2.2 Low-threshold calcium current $I_{Ca(T)}$ 194
7.4.2.3 High-threshold Ca^{2+} current $I_{Ca(N)}$ 195
7.4.2.4 P-type calcium current $I_{Ca(P)}$ 196
7.4.3 Potassium currents 197
7.4.3.1 Voltage-gated K^+ currents 198
7.4.3.2 Calcium-gated K^+ currents 201
7.4.3.3 Other K^+ currents 203
7.4.4 Nonselective cation currents 205
7.5 Functions of different membrane currents 205
7.6 Summary of important concepts 210
7.7 Homework problems 210

8 Molecular Structure and Unitary Currents of Ion Channels 215
8.1 Introduction 215
8.2 Molecular structure of ion channels 216
8.3 Patch-clamp records of single-channel currents 219

8.4 Review of important concepts 225

9 Stochastic Analysis of Single-Channel Function 227

9.1 Introduction 227
9.2 Basic descriptive properties of random data 228
9.2.1 Mean square values 228
9.2.2 Probability functions 229
9.2.3 Covariance function $C(\tau)$ and correlation function $R(\tau)$ 233
9.2.4 Power spectral density function $S(f)$ 234
9.2.4.1 Experimental approach 235
9.2.4.2 Theoretical approach 235
9.3 Statistical analysis of channel gating 235
9.4 Probability density function of channel gating 240
9.5 Review of important concepts 243
9.6 Homework problems 244

10 Formulation of Stochastic Channel Mechanisms 249

10.1 Introduction 249
10.2 Derivation of the Chapman-Kolmogorov equation 250
10.3 Chapman-Kolmogorov equation for n-state channels 253
10.4 Stochastic analysis of n-state channels 264
10.4.1 Channels involving three-state transition schemes 264
10.4.2 Channels involving many-state transition schemes 272
10.4.2.1 Two-agonist binding scheme: A five-state scheme 273
10.4.2.2 The Hodgkin and Huxley K^+ and Na^+ channels 273
10.5 Conclusions: Analysis of ionic currents 277
10.6 Review of important concepts 277
10.7 Homework problems 278

11 Synaptic Transmission I: Presynaptic Mechanisms 287

11.1 Introduction 287
11.1.1 Why chemical synaptic transmission? 288

11.2	Chemical transmission	290
11.3	Experiments at the neuromuscular junction	292
11.4	Statistical treatment of quantum hypothesis	293
11.4.1	Spontaneous release	294
11.4.2	Evoked release	298
11.4.2.1	Poisson model	298
11.4.2.2	Binomial model	299
11.4.2.3	Examples	301
11.4.2.4	Requirements for quantal analysis	308
11.5	Use-dependent synaptic plasticities	309
11.5.1	Facilitation, post-tetanic potentiation, and depression	309
11.5.2	Long-term potentiation	313
11.6	Synaptic transmission between central neurons	314
11.7	Summary of important concepts	317
11.8	Homework problems	317

12 Synaptic Transmission II: Ca^{2+} and Transmitter Release 323

12.1	Introduction	323
12.2	Formulation of the Ca^{2+} hypothesis	324
12.3	Cooperative action of Ca^{2+} ions on transmitter release	326
12.4	Biophysical analysis of Ca^{2+} and transmitter release	328
12.4.1	Voltage clamping the squid giant synapse	329
12.4.2	Presynaptic Ca^{2+} currents	333
12.4.3	Relationship between I_{Ca} and transmitter release	334
12.4.4	Cooperative action of Ca^{2+} at the squid synapse	338
12.4.5	A model for transmitter release at the squid synapse	340
12.4.6	Synaptic delay	342
12.5	Ca^{2+} and synaptic plasticity	343
12.5.1	Synaptic depression	343
12.5.2	Facilitation and PTP: The residual Ca^{2+} hypothesis	344

12.5.2.1 Facilitation 344
12.5.2.2 PTP 345
12.5.3 Presynaptic modulation of transmitter release 346
12.6 Molecular mechanisms of release 347
12.6.1 Early hypotheses for Ca^{2+}-dependent exocytosis 347
12.6.2 Fusion pores 349
12.6.3 Vesicle-associated proteins: Possibilities for the Ca^{2+} receptor 350
12.6.4 Calcium domains, active zones, and calcium buffering 351
12.7 Summary of important concepts 355
12.8 Homework problems 355

13 Synaptic Transmission III: Postsynaptic Mechanisms 357
13.1 Introduction 357
13.2 General scheme for ligand-gated channels 357
13.3 Synaptic conductances and reversal potentials 360
13.3.1 Definitions of excitatory and inhibitory responses 360
13.3.2 Voltage-clamp analysis of synaptic parameters (*I-V* curves) 363
13.3.3 Conductance and reversal potentials for nonisopotential synaptic inputs 366
13.3.3.1 Reversal potentials and conductance ratios: General 367
13.3.3.2 Reversal potentials and conductance ratios: Nonisopotential synapses 369
13.3.3.3 Synaptic conductance change for nonisopotential synapses 372
13.4 Synaptic kinetics 373
13.4.1 Theory for channel kinetics and the time course of synaptic currents 375
13.4.2 Kinetics of nonisopotential synapses 380
13.5 Excitatory amino acid receptors 382
13.6 Functional properties of synapses 386
13.6.1 Spatial summation 387

13.6.2 Temporal summation 388
13.7 Slow synaptic responses: Conductance-decrease PSPs 389
13.8 Diversity of neurotransmitters in the central nervous system 390
13.9 Electrical transmission 392
13.9.1 Electrical synapses 392
13.9.2 Ephaptic coupling 395
13.10 Compartmental models for a neuron 396
13.11 Dendritic spines and their effects on synaptic inputs 400
13.11.1 Attenuation of potential between dendritic shaft and spine head 400
13.11.2 Synapse on the head of a spine 403
13.11.3 Spines represented as series resistors 403
13.11.4 The attenuation of synaptic inputs by spines 404
13.11.4.1 Attenuation of synaptic current by a spine: Synaptic charge transfer 406
13.11.4.2 Examples of voltage boosting, voltage attenuation, and charge transfer for a typical spine 408
13.12 Summary of important concepts 411
13.13 Homework problems 411

14 Extracellular Field Recordings 423

14.1 Introduction 423
14.2 Potentials in a volume conductor 424
14.2.1 Action potential along a nerve fiber 424
14.2.2 Active neuron is an electric dipole 426
14.2.3 Volume conductor theory 426
14.3 Classification of fields 428
14.3.1 Open field 429
14.3.2 Closed field 429
14.3.3 Open-closed field 430
14.4 Semiquantitative theory for extracellular fields 430
14.4.1 Typical extracellular recordings in an open field 432

14.5 Current source-density analysis 435
14.6 Summary of important concepts 438
14.7 Homework problems 439

15 Cellular Neurophysiology of Learning and Memory 441
15.1 Introduction 441
15.1.1 Spine shape changes as a substrate for synaptic plasticity 441
15.1.1.1 Examples for spine shape changes and synaptic plasticity 442
15.1.2 Summary of the possible effects of dendritic spines 444
15.2 Long-term synaptic plasticity 444
15.2.1 Long-term potentiation 444
15.2.1.1 Definitions 445
15.2.1.2 Induction paradigms 446
15.2.1.3 EPSP vs. E-S potentiation 446
15.2.1.4 Neuromodulation 448
15.2.1.5 Synapse specificity and homosynaptic vs. heterosynaptic LTP 448
15.2.1.6 Cooperativity 449
15.2.1.7 Associativity 450
15.2.1.8 The Hebb rule for synaptic plasticity 454
15.2.1.9 Cellular mechanisms for long-term potentiation 458
15.2.2 Long-term depression 461
15.3 Associative and nonassociative forms of learning 464
15.3.1 Habituation 465
15.3.2 Classical conditioning 465
15.3.3 Instrumental or operant conditioning 467
15.4 Role of hippocampus in learning and memory 467
15.5 Computational model for learning and memory 469
15.5.1 Correlation matrix 470
15.5.2 Neurophysiological implementation of the correlation matrix 471
15.6 Summary of important concepts 475

15.7 Homework problems 475

A Basic Electricity and Electrical Circuits 481

A.1 Introduction 481
A.2 Definitions related to measuring systems 482
A.3 Definitions and units for electrical circuits 486
A.3.1 Electromotive force 486
A.3.2 Coulomb 486
A.3.3 Faraday 487
A.3.4 Current 487
A.3.5 Ohm's law 487
A.3.6 Capacitance 488
A.3.7 Kirchhoff's laws 489
A.3.8 Voltage source 491
A.3.9 Current source 492
A.3.10 Voltage and current measurement 493
A.3.11 Impedance 493
A.3.12 Input impedance and input resistance 494
A.3.13 Source impedance 494
A.3.14 Filters 495
A.3.15 Response of resistors and capacitors to different forcing functions 496
A.3.16 Measuring biological signals 499
A.4 Amplifiers and voltage-clamp circuits 503
A.4.1 Ideal amplifier 503
A.4.2 Practical circuits 504
A.4.2.1 Inverter 504
A.4.2.2 Noninverter 506
A.4.2.3 Follower 507
A.4.3 Voltage-clamp circuit 507
A.4.4 Patch-clamp circuit (current-to-voltage converter) 509
A.5 Summary of important concepts 512
A.6 Homework problems 512

B Optical Methods in Cellular Neurophysiology 515

B.1 Introduction 515
B.2 Definitions 515
B.2.1 Optics 515
B.2.2 Microscopy 519
B.3 Optical probes 531
B.3.1 Potential-dependent light signals 531
B.3.2 Concentration-sensitive fluorescent probes 532
B.4 Photoactivated "caged" compounds 534
B.5 Summary of important concepts 535

C Short Answers to Homework Problems 537

D Complete Solutions to Problems 549

Suggested Readings 635
