

## CONTENTS

### Part I

<b>Introduction</b>	v
<b>Preface General</b>	vii
<b>Preface to Part I</b>	ix
<b>1. The Chemical Applicability of Standard Methods in <i>Ab Initio</i> Molecular Quantum Mechanics</b>	3
Henry F. Schaefer III, J. Russell Thomas, Yukio Yamaguchi, Bradley J. DeLeeuw and George Vacek	
<b>2. Multiconfigurational Second-Order Perturbation Theory</b>	55
Kerstin Andersson and Björn O. Roos	
<b>3. Direct Methods in Electronic Structure Theory</b>	110
Jan Almlöf	
<b>4. <i>Ab Initio</i> Calculation of Spin-Orbit Effects in Molecules Including Electron Correlation</b>	152
B. A. Heß, C. M. Marian and S. D. Peyerimhoff	
<b>5. Theoretical Studies of Fullerenes</b>	279
Gustavo E. Scuseria	
<b>6. Main Group Organometallic Chemistry: Bonding, Structure and Reactivity</b>	311
Mark S. Gordon	
<b>7. The Analytic Gradient Method for Configuration Interaction Wave Functions</b>	345
Ron Shepard	

<b>8. Geometry Optimization on Potential Energy Surfaces</b>	459
H. Bernhard Schlegel	
<b>9. The Incorporation of Modern Electronic Structure Methods in Electron-Molecule Collision Problems: Variational Calculations Using the Complex Kohn Method</b>	501
T. N. Rescigno, B. H. Lengsfeld III and C. W. McCurdy	
<b>10. Exact Expansion Methods for Atomic Hydrogen in an External Electrostatic Field: Divergent Perturbation Series, Borel Summability, Semiclassical Approximation, and Expansion of Photoionization Cross-Section over Resonance Eigenvalues</b>	589
Harris J. Silverstone	
<b>11. Electronic Structure Aspects of Nonadiabatic Processes in Polyatomic Systems</b>	642
David R. Yarkony	
<b>Index</b>	I-1

## Part II

<b>Introduction</b>	v
<b>Preface General</b>	vii
<b>Preface to Part II</b>	ix
<b>12. Gaussian Basis Sets and Molecular Integrals</b>	725
Trygve Helgaker and Peter R. Taylor	
<b>13. Time-Dependent Response Theory with Applications to Self-Consistent Field and Multiconfigurational Self-Consistent Field Wave Functions</b>	857
Jeppe Olsen and Poul Jørgensen	
<b>14. Evaluation of Bond Energies to Chemical Accuracy by Quantum Chemical Techniques</b>	991
Krishnan Raghavachari and Larry A. Curtiss	

15. **Exchange–Correlation Approximations in Density-Functional Theory** 1022  
Axel D. Becke
16. **Coupled-Cluster Theory: An Overview of Recent Developments** 1047  
Rodney J. Bartlett
17. **Pseudospectral Methods Applied to the Electron Correlation Problem** 1132  
Todd J. Martinez and Emily A. Carter
18. **Quasidegenerate Perturbation Theory Using Effective Hamiltonians** 1166  
Mark R. Hoffmann
19. **Analytical Derivative Techniques and the Calculation of Vibrational Spectra** 1191  
Peter Pulay
20. **Applications of Molecular Structure Methods to Problems in Astrochemistry** 1241  
Kate P. Kirby
21. **The Application of *Ab Initio* Electronic Structure Calculations to Molecules Containing Transition Metal Atoms** 1280  
Charles W. Bauschlicher, Jr., Stephen R. Langhoff and Harry Partridge
22. **Studies of Electron–Molecule Collisions on Massively Parallel Computers** 1375  
Carl Winstead and Vincent McKoy
- Index** I-1
