

CONTENTS

1. SUMMARY	1
1.1. Introduction	1
1.2. Radioactive source terms	1
1.3. Chernobyl affected areas	1
1.3.1. Transboundary migration of radionuclides	2
1.3.2. Behaviour of caesium-137 and strontium-90 in the environment	2
1.3.3. Chernobyl exclusion zone	3
1.3.4. Contaminated floodplain	3
1.3.5. Chernobyl cooling pond	3
1.3.6. Chernobyl shelter	3
1.4. Nuclear power plants	4
1.5. Uranium mining and processing	4
1.6. Radioactive waste storage and disposal sites	6
1.7. Non-power sources	6
1.8. Human radiation exposure from environmental sources	6
1.9. Analysis of hot spots and possible accidents	8
1.10. Conclusions	8
1.10.1. Chernobyl affected areas	8
1.10.2. Nuclear power plants	9
1.10.3. Uranium mining and milling	9
1.10.4. Other radiological sources	9
1.10.5. Human exposure to radiation	9
1.10.6. General	10
1.11. Recommendations	10
1.11.1. Chernobyl affected areas	10
1.11.2. Nuclear power plants	11
1.11.3. Uranium mining and processing	11
1.11.4. General	11
References to Section 1	12
2. INTRODUCTION	13
References to Section 2	14
3. RADIOACTIVITY IN THE DNIEPER RIVER BASIN	15
3.1. Areas affected by the Chernobyl nuclear accident	15
3.2. Nuclear power plants	18
3.3. Uranium mining and processing	18
3.4. Radioactive waste storage and disposal sites	19
3.5. Non-power sources	19
References to Section 3	19
4. CHERNOBYL AFFECTED AREAS	21
4.1. Scope	21
4.2. Distribution of fallout from the Chernobyl accident	21
4.3. Monitoring of radioactivity in the environment	26

4.3.1.	Types of environmental monitoring	26
4.3.1.1.	Airborne monitoring	27
4.3.1.2.	Surface waters	27
4.3.1.3.	Bottom sediments	27
4.3.2.	Monitoring sites	28
4.3.2.1.	Belarus	28
4.3.2.2.	Russian Federation	28
4.3.2.3.	Ukraine	29
4.3.3.	Databases on surface waters	31
4.3.4.	Data quality	33
4.3.5.	Storage, publication and use of monitoring data	36
4.4.	Characteristics of radionuclide runoff	36
4.4.1.	Radionuclide dynamics in catchment areas	37
4.4.2.	Characteristics of runoff in Belarus	39
4.4.3.	Characteristics of runoff in the Russian Federation	40
4.4.4.	Chernobyl exclusion zone, Ukraine	42
4.5.	Analysis of key processes governing the long term dynamics of radioactive contamination of the Dnieper water system	49
4.6.	Transboundary fluxes of radionuclides in the Dnieper River basin	51
4.7.	Radionuclides in the Dnieper reservoirs	53
4.7.1.	Assessment of radionuclide influx into the cascade	53
4.7.2.	Current state of the radioactive contamination of the reservoirs	54
4.7.3.	Current state of radioactive contamination of the bottom sediments	57
4.8.	Conclusions	61
	References to Section 4	62
5.	NUCLEAR POWER PLANTS	65
5.1.	Scope	65
5.2.	Nuclear reactors in the region	65
5.2.1.	Russian reactors within the Dnieper River basin	65
5.2.1.1.	Kursk nuclear power plant	65
5.2.1.2.	Smolensk nuclear power plant	65
5.2.2.	Ukrainian reactors	66
5.2.2.1.	Zaporozhe nuclear power plant	66
5.2.2.2.	Rovno nuclear power plant	66
5.2.2.3.	Khmelnitski nuclear power plant	67
5.2.2.4.	South Ukraine nuclear power plant	67
5.2.3.	Ignalina nuclear power plant, Lithuania	67
5.3.	Safety features of nuclear reactors	68
5.3.1.	Russian Federation	68
5.3.2.	Ukraine	69
5.4.	Licensing status of nuclear facilities	71
5.4.1.	Russian Federation	71
5.4.2.	Ukraine	72
5.5.	System for environmental radiation monitoring in the vicinity of nuclear power plants	74
5.5.1.	Russian Federation	74
5.5.2.	Ukraine	75
5.5.3.	Belarus	75
5.6.	Releases from nuclear reactors in the Dnieper River basin	75
5.6.1.	Releases from the Kursk and Smolensk nuclear power plants	75
5.6.2.	Radioactive contamination in the vicinities of the Kursk and Smolensk nuclear power plants	76

5.6.2.1. Soil	76
5.6.2.2. Air	77
5.6.2.3. Natural water	78
5.6.3. Releases from Ukrainian nuclear power plants	78
5.7. Management of radioactive waste and spent fuel	81
5.7.1. Russian nuclear power plants	81
5.7.2. Ukrainian nuclear power plants	82
5.7.2.1. Zaporozhe nuclear power plant	82
5.7.2.2. Rovno nuclear power plant	83
5.7.2.3. Khmel'nitski nuclear power plant	83
5.8. Overview of safety analyses performed for nuclear reactors	84
5.8.1. Russian Federation	84
5.8.2. Ukraine	85
5.9. Status of the implementation of safety improvement programmes for nuclear facilities	86
5.9.1. Russian Federation	86
5.9.2. Ukraine	90
5.9.3. Emergency preparedness and response	91
5.10. Conclusions	93
5.11. Recommendations	93
References to Section 5	94
6. URANIUM MINING AND ORE PROCESSING	96
6.1. Scope	96
6.2. Overview of uranium mining and processing in the Dnieper River basin	96
6.3. Systems for monitoring pollution from the uranium industry	97
6.4. Sources of potential contamination at the Zhovti Vody site	98
6.4.1. Tailings KBZh	98
6.4.2. Tailings Sch	98
6.4.3. Tailings R	100
6.5. Assessment of the sources of contamination of natural waters in the Zhovti Vody area	101
6.6. Effect of in situ leaching of uranium on contamination of natural waters	103
6.6.1. Devladovo site	103
6.6.2. Forecast of the long term potential contamination of the Saksagan River	103
6.7. Impact of the former Pervomayskaya uranium mining operation on radioactive contamination of natural waters	105
6.8. Radioactive waste from former uranium processing in Dniprodzerzhinsk	106
6.8.1. Tailings Zapadnoye	107
6.8.2. Tailings Centralny Yar	108
6.8.3. Tailings Yugo-Vostochnoye	108
6.8.4. Tailings Dniprovske (D)	108
6.8.5. Base C	110
6.8.6. Tailings C	110
6.8.7. Other contaminated areas	110
6.9. Assessment of the impact of waste from the Prydniprovsky chemical plant	111
6.10. Plans for future restoration of radioactive waste sites	114
6.11. Conclusions and recommendations	114
References to Section 6	115
7. OTHER RADIOLOGICAL SOURCES WITHIN THE DNEIPEP RIVER BASIN	116
7.1. Research reactors	116
7.2. Medical and industrial uses of radioisotopes	116
7.3. Buried waste of Chernobyl origin	117

7.3.1.	Storage and disposal sites in Ukraine	117
7.3.2.	Waste from decommissioning of Chernobyl nuclear facilities	118
7.3.3.	Chernobyl contaminated waste in Belarus	119
7.3.4.	Disposal sites in the Russian Federation	120
7.4.	Storage/disposal of radioactive waste from non-power applications	121
7.4.1.	Ukraine	121
7.4.2.	Belarus	123
7.5.	Conclusions	124
	References to Section 7	125
8.	ASSESSMENT OF HUMAN EXPOSURE TO RADIATION WITHIN THE DNIEPER RIVER BASIN	126
8.1.	Overview of radiation doses and associated health effects	126
8.1.1.	Doses of ionizing radiation	126
8.1.2.	Radiobiological effects and health risks	126
8.1.3.	International system of radiation protection	128
8.1.4.	Radionuclides in the Dnieper River basin	129
8.2.	Major sources and pathways of human exposure in the Dnieper River basin	130
8.3.	Models of external and internal exposure	131
8.3.1.	Model for external exposure	131
8.3.2.	Model for internal exposure	132
8.4.	Dose from natural radionuclides	134
8.4.1.	General public	134
8.4.2.	Population of the Ukrainian uranium mining and milling areas	135
8.5.	Present and future human exposure levels caused by Chernobyl fallout	137
8.5.1.	General public	138
8.5.2.	Inhabitants of contaminated areas	138
8.5.2.1.	External exposure	139
8.5.2.2.	Internal exposure	139
8.5.2.3.	Total dose	140
8.6.	Contribution of aquatic pathways	143
8.6.1.	General public	143
8.6.1.1.	Consumption of drinking water from the Dnieper reservoirs	143
8.6.1.2.	Consumption of fish taken from the Dnieper reservoirs	143
8.6.1.3.	Consumption of agricultural products grown on lands irrigated using water from the Dnieper reservoirs	143
8.6.2.	Hot spots: closed lakes	145
8.7.	Conclusions	146
	References to Section 8	147
9.	RADIOLOGICAL HOT SPOTS IN THE DNIEPER RIVER BASIN	149
9.1.	Concept of radiological hot spots	149
9.2.	List of the candidate radioactive hot spots	150
9.3.	Assessment of the hot spots in the Chernobyl affected areas	150
9.3.1.	Pripyat River floodplain upstream of the Chernobyl nuclear power plant	150
9.3.2.	Chernobyl cooling pond	154
9.3.3.	Chernobyl shelter	156

9.3.3.1.	Assessment of Dnieper River basin contamination due to surface water transport	157
9.3.3.2.	Radionuclide flux from the shelter to the Pripyat River via groundwater	160
9.3.3.3.	Scenario 1: Shelter without the new safe confinement	161
9.3.3.4.	Scenario 2: Shelter with the new safe confinement	162
9.3.4.	Chernobyl exclusion zone (Ukrainian and Belarusian parts)	163
9.3.5.	Affected areas outside the Chernobyl exclusion zone: closed lakes	163
9.3.5.1.	Russian Federation	164
9.3.5.2.	Belarus	165
9.3.5.3.	Ukraine	166
9.3.5.4.	Overall assessment of closed lakes	167
9.3.6.	Affected areas outside the Chernobyl exclusion zone: Kiev reservoir	167
9.4.	Uranium processing sites in Ukraine	168
9.5.	Waste storage/disposal facilities	171
9.5.1.	Ecores facility	171
9.5.2.	RADON radioactive waste storage sites in Ukraine	171
9.5.3.	Waste storage facilities at nuclear power plants	173
9.6.	Potential accidents at nuclear power plants	173
9.7.	Final classification of hot spots	176
	References to Section 9	177
10.	MAJOR CONCLUSIONS	180
10.1.	Introduction	180
10.2.	Chernobyl affected areas	180
10.3.	Nuclear power plants	180
10.4.	Uranium mining and milling	180
10.5.	Other radiological sources	181
10.6.	Human exposure to radiation	181
10.7.	General	182
10.7.1.	Classification of hot spots	182
10.8.	Possible accidents	182
	RECOMMENDATIONS TO THE GOVERNMENTS OF BELARUS, THE RUSSIAN FEDERATION AND UKRAINE FOR THE STRATEGIC ACTION PLAN AND NATIONAL ACTION PLANS	183
11.1.	Chernobyl affected areas	183
11.2.	Nuclear power plants	183
11.3.	Uranium mining and processing	183
11.4.	General	184
	CONTRIBUTORS TO DRAFTING AND REVIEW	185
