<i>Foreword</i> , by James Bjorken	page xi
<i>Preface</i>	xiii
<i>Acknowledgements</i>	xvi
<i>Terminology and notation</i>	xviii
Part I Relativistic foundations	1
1 General ideas and heuristic picture	3
1.1 The problem of quantum gravity	3
1.1.1 Unfinished revolution	3
1.1.2 How to search for quantum gravity?	4
1.1.3 The physical meaning of general relativity	9
1.1.4 Background-independent quantum field theory	10
1.2 Loop quantum gravity	13
1.2.1 Why loops?	14
1.2.2 Quantum space: spin networks	17
1.2.3 Dynamics in background-independent QFT	22
1.2.4 Quantum spacetime: spinfoam	26
1.3 Conceptual issues	28
1.3.1 Physics without time	29
2 General Relativity	33
2.1 Formalism	33

2.1.1	Gravitational field	33
2.1.2	“Matter”	37
2.1.3	Gauge invariance	40
2.1.4	Physical geometry	42
2.1.5	Holonomy and metric	44
2.2	The conceptual path to the theory	48
2.2.1	Einstein’s first problem: a field theory for the newtonian interaction	48
2.2.2	Einstein’s second problem: relativity of motion	52
2.2.3	The key idea	56
2.2.4	Active and passive diffeomorphisms	62
2.2.5	General covariance	65
2.3	Interpretation	71
2.3.1	Observables, predictions and coordinates	71
2.3.2	The disappearance of spacetime	73
2.4	* Complements	75
2.4.1	Mach principles	75
2.4.2	Relationalism versus substantivalism	76
2.4.3	Has general covariance any physical content? Kretschmann’s objection	78
2.4.4	Meanings of time	82
2.4.5	Nonrelativistic coordinates	87
2.4.6	Physical coordinates and GPS observables	88
3	Mechanics	98
3.1	Nonrelativistic mechanics: <i>mechanics is about time evolution</i>	98
3.2	Relativistic mechanics	105
3.2.1	Structure of relativistic systems: partial observables, relativistic states	105
3.2.2	Hamiltonian mechanics	108
3.2.3	Nonrelativistic systems as a special case	114
3.2.4	Discussion: <i>mechanics is about relations between observables</i>	118
3.2.5	Space of boundary data \mathcal{G} and Hamilton function S	120
3.2.6	Evolution parameters	126
3.2.7	* Complex variables and reality conditions	128
3.3	Field theory	129
3.3.1	Partial observables in field theory	130
3.3.2	* Relativistic hamiltonian mechanics	131
3.3.3	The space of boundary data \mathcal{G} and the Hamilton function S	134

3.3.4	Hamilton–Jacobi	137
3.4	* Thermal time hypothesis	140
4	Hamiltonian general relativity	145
4.1	Einstein–Hamilton–Jacobi	145
4.1.1	3d fields. “ <i>The length of the electric field is the area</i> ”	147
4.1.2	Hamilton function of GR and its physical meaning	151
4.2	Euclidean GR and real connection	153
4.2.1	Euclidean GR	153
4.2.2	Lorentzian GR with a real connection	155
4.2.3	Barbero connection and Immirzi parameter	156
4.3	* Hamiltonian GR	157
4.3.1	Version 1: real $SO(3,1)$ connection	157
4.3.2	Version 2: complex $SO(3)$ connection	157
4.3.3	Configuration space and hamiltonian	158
4.3.4	Derivation of the Hamilton–Jacobi formalism	159
4.3.5	Reality conditions	162
5	Quantum mechanics	164
5.1	Nonrelativistic QM	164
5.1.1	Propagator and spacetime states	166
5.1.2	Kinematical state space \mathcal{K} and “projector” P	169
5.1.3	Partial observables and probabilities	172
5.1.4	Boundary state space \mathbf{K} and covariant vacuum $ 0\rangle$	174
5.1.5	* Evolving constants of motion	176
5.2	Relativistic QM	177
5.2.1	General structure	177
5.2.2	Quantization and classical limit	179
5.2.3	Examples: pendulum and timeless double pendulum	180
5.3	Quantum field theory	184
5.3.1	Functional representation	186
5.3.2	Field propagator between parallel boundary surfaces	190
5.3.3	Arbitrary boundary surfaces	193
5.3.4	What is a particle?	195
5.3.5	Boundary state space \mathbf{K} and covariant vacuum $ 0\rangle$	197
5.3.6	Lattice scalar product, intertwiners and spin network states	198
5.4	Quantum gravity	200
5.4.1	Transition amplitudes in quantum gravity	200
5.4.2	Much ado about nothing: the vacuum	202

5.5	* Complements	204
5.5.1	Thermal time hypothesis and Tomita flow	204
5.5.2	The “choice” of the physical scalar product	206
5.5.3	Reality conditions and scalar product	208
5.6	* Relational interpretation of quantum theory	209
5.6.1	The observer observed	210
5.6.2	Facts are interactions	215
5.6.3	Information	218
5.6.4	Spacetime relationalism versus quantum relationalism	220
Part II Loop quantum gravity		223
6	Quantum space	225
6.1	Structure of quantum gravity	225
6.2	The kinematical state space \mathcal{K}	226
6.2.1	Structures in \mathcal{K}	230
6.2.2	Invariances of the scalar product	231
6.2.3	Gauge-invariant and diffeomorphism-invariant states	233
6.3	Internal gauge invariance. The space \mathcal{K}_0	234
6.3.1	Spin network states	234
6.3.2	* Details about spin networks	236
6.4	Diffeomorphism invariance. The space $\mathcal{K}_{\text{diff}}$	238
6.4.1	Knots and s -knot states	240
6.4.2	The Hilbert space $\mathcal{K}_{\text{diff}}$ is separable	241
6.5	Operators	242
6.5.1	The connection A	242
6.5.2	The conjugate momentum E	243
6.6	Operators on \mathcal{K}_0	246
6.6.1	The operator $\mathbf{A}(\mathcal{S})$	246
6.6.2	Quanta of area	249
6.6.3	* n -hand operators and recoupling theory	250
6.6.4	* Degenerate sector	253
6.6.5	Quanta of volume	259
6.7	Quantum geometry	262
6.7.1	The texture of space: weaves	268
7	Dynamics and matter	276
7.1	Hamiltonian operator	277
7.1.1	Finiteness	280
7.1.2	Matrix elements	282

7.1.3	Variants	284
7.2	Matter: kinematics	286
7.2.1	Yang–Mills	286
7.2.2	Fermions	287
7.2.3	Scalars	288
7.2.4	The quantum states of space and matter	289
7.3	Matter: dynamics and finiteness	289
7.4	Loop quantum gravity	291
7.4.1	* Variants	293
8	Applications	296
8.1	Loop quantum cosmology	296
8.1.1	Inflation	301
8.2	Black-hole thermodynamics	301
8.2.1	The statistical ensemble	303
8.2.2	Derivation of the Bekenstein–Hawking entropy	308
8.2.3	Ring modes frequencies	311
8.2.4	The Bekenstein–Mukhanov effect	312
8.3	Observable effects	315
9	Quantum spacetime: spinfoams	320
9.1	From loops to spinfoams	321
9.2	Spinfoam formalism	327
9.2.1	Boundaries	328
9.3	Models	329
9.3.1	3d quantum gravity	331
9.3.2	BF theory	340
9.3.3	The spinfoam/GFT duality	343
9.3.4	BC models	348
9.3.5	Group field theory	356
9.3.6	Lorentzian models	359
9.4	Physics from spinfoams	361
9.4.1	Particles’ scattering and Minkowski vacuum	363
10	Conclusion	366
10.1	The physical picture of loop gravity	366
10.1.1	GR and QM	366
10.1.2	Observables and predictions	367
10.1.3	Space, time and unitarity	368
10.1.4	Quantum gravity and other open problems	370
10.2	What has been achieved and what is missing?	371

	Part III Appendices	375
	Appendix A Groups and recoupling theory	377
A1	$SU(2)$: spinors, intertwiners, n - j symbols	377
A2	Recoupling theory	383
	A2.1 Penrose binor calculus	383
	A2.2 KL recoupling theory	385
	A2.3 Normalizations	388
A3	$SO(n)$ and simple representations	390
	Appendix B History	393
B1	Three main directions	393
B2	Five periods	396
	B2.1 The Prehistory: 1930–1957	398
	B2.2 The Classical Age: 1958–1969	400
	B2.3 The Middle Ages: 1970–1983	403
	B2.4 The Renaissance: 1984–1994	407
	B2.5 Nowadays: 1995–	410
B3	The divide	412
	Appendix C On method and truth	415
C1	The cumulative aspects of scientific knowledge	415
C2	On realism	420
C3	On truth	422
