BOOK I

ALGEBRAIC PRELIMINARIES

CHAPTER I: RINGS AND FIELDS

	PAGE		PAGE
1. Groups	2	6. The division algorithm	24
2. Rings	6	7. Factorisation in an integral domain	27
3. Classification of rings	12	8. Factorisation in polynomial rings	33
4. The quotient field of an integral domain	15	9. Examples of fields	37
5. Polynomial rings	19		

CHAPTER II: LINEAR ALGEBRA, MATRICES, DETERMINANTS

1. Linear dependence	41	7. Matrices over a commutative field	71
2. Matrices	49	8. Determinants	73
3. Square matrices	54	9. λ -matrices	86
4. Transformations of a matrix	58	10. Miscellaneous theorems	95
5. The rank of a matrix	65		
6. Homogeneous linear equations	68		

CHAPTER III: ALGEBRAIC DEPENDENCE

1. Simple algebraic extensions	99	6. Primitive elements of algebraic extensions	126
2. Extensions of a commutative field	101	7. Differentiation of algebraic functions	128
3. Extensions of finite degree	105	8. Some useful theorems	136
4. Factorisation of polynomials	111		
5. Differentiation of polynomials	119		

CHAPTER IV: ALGEBRAIC EQUATIONS

1. Introduction	139	6. The resultant system for a set of homogeneous equations in several unknowns	159
2. Hilbert's basis theorem	142	7. Non-homogeneous equations in several unknowns	162
3. The resultant of two binary forms	146	8. Hilbert's zero-theorem	165
4. Some properties of the resultant	152	9. The resultant ideal	166
5. The resultant of a system of binary equations	156	10. The u -resultant of a system of equations	171

BOOK II

PROJECTIVE SPACE

CHAPTER V: PROJECTIVE SPACE: ALGEBRAIC DEFINITION

	PAGE		PAGE
1. Introduction	175	6. Desargues' Theorem	191
2. Projective number space	176	7. Some fundamental constructions	196
3. Projective space of n dimensions	178	8. The condition for a commutative field; Pappus' Theorem	202
4. Linear dependence in $P_n^r(K)$	180	9. Some finite geometries	205
5. Equations of linear spaces. Duality	186	10. r -way spaces	206

CHAPTER VI: PROJECTIVE SPACE: SYNTHETIC DEFINITION

1. Propositions of incidence	208	7. The algebra of points on a line	253
2. Desargues' Theorem	213	8. The representation of the incidence space as a $P_n^r(K)$	259
3. Related ranges	216	9. Restrictions on the geometry	272
4. Harmonic conjugates	224	10. Consequences of assuming Pappus' Theorem	274
5. Two projectively invariant constructions	231		
6. Reference systems	246		

CHAPTER VII: GRASSMANN COORDINATES

1. Linear spaces	286	5. Some results on intersections and joins	304
2. Grassmann coordinates	288	6. Quadratic p -relations	309
3. Dual Grassmann coordinates	292	7. The basis theorem	315
4. Elementary properties of Grassmann coordinates	297		

CHAPTER VIII: COLLINEATIONS

1. Projective transformations	322	4. The united k -spaces of a non-singular collineation	344
2. Collineations	327	5. Cyclic collineations	352
3. United points and primes of a non-singular collineation	333	6. Some particular collineations	354
		7. Singular collineations	358

CHAPTER IX: CORRELATIONS

1. Correlations	362	6. Canonical forms for correlations	411
2. Polarities	367	7. Some geometrical properties of correlations	419
3. Null-polarities	378		
4. Simple correlations	390		
5. Transformation of the general correlation	395
