## **CHAPTER I** *Introduction*

---

1

<b>1.1</b>	What and How?	2
<b>1.2</b>	Physical Origins and Rate Equations	3
1.2.1	Conduction 3	
1.2.2	Convection 6	
1.2.3	Radiation 9	
1.2.4	Relationship to Thermodynamics 12	
<b>1.3</b>	The Conservation of Energy Requirement	13
1.3.1	Conservation of Energy for a Control Volume 13	
1.3.2	The Surface Energy Balance 25	
1.3.3	Application of the Conservation Laws: Methodology 28	
<b>1.4</b>	Analysis of Heat Transfer Problems: Methodology	29

<b>1.5</b>	Relevance of Heat Transfer	32
<b>1.6</b>	Units and Dimensions	35
<b>1.7</b>	Summary	38
	References	
	Problems	
		41
		41

**CHAPTER 2***Introduction to Conduction***57**

<b>2.1</b>	The Conduction Rate Equation	58
<b>2.2</b>	The Thermal Properties of Matter	60
2.2.1	Thermal Conductivity	60
2.2.2	Other Relevant Properties	67
<b>2.3</b>	The Heat Diffusion Equation	70
<b>2.4</b>	Boundary and Initial Conditions	77
<b>2.5</b>	Summary	81
	References	
	Problems	
		82
		82

**CHAPTER 3***One-Dimensional, Steady-State Conduction***95**

<b>3.1</b>	The Plane Wall	96
3.1.1	Temperature Distribution	96
3.1.2	Thermal Resistance	98
3.1.3	The Composite Wall	99
3.1.4	Contact Resistance	101
<b>3.2</b>	An Alternative Conduction Analysis	112
<b>3.3</b>	Radial Systems	116
3.3.1	The Cylinder	116
3.3.2	The Sphere	122
<b>3.4</b>	Summary of One-Dimensional Conduction Results	125
<b>3.5</b>	Conduction with Thermal Energy Generation	126
3.5.1	The Plane Wall	127
3.5.2	Radial Systems	132
3.5.3	Application of Resistance Concepts	137
<b>3.6</b>	Heat Transfer from Extended Surfaces	137
3.6.1	A General Conduction Analysis	139
3.6.2	Fins of Uniform Cross-Sectional Area	141
3.6.3	Fin Performance	147
3.6.4	Fins of Nonuniform Cross-Sectional Area	150
3.6.5	Overall Surface Efficiency	153
<b>3.7</b>	The Bioheat Equation	162
<b>3.8</b>	Summary	166
	References	
	Problems	
		168
		169

**CHAPTER 4*****Two-Dimensional, Steady-State Conduction*****201**

<b>4.1</b>	Alternative Approaches	202
<b>4.2</b>	The Method of Separation of Variables	203
<b>4.3</b>	The Conduction Shape Factor and the Dimensionless Conduction Heat Rate	207
<b>4.4</b>	Finite-Difference Equations	212
4.4.1	The Nodal Network	213
4.4.2	Finite-Difference Form of the Heat Equation	214
4.4.3	The Energy Balance Method	215
<b>4.5</b>	Solving the Finite-Difference Equations	222
4.5.1	The Matrix Inversion Method	222
4.5.2	Gauss-Seidel Iteration	223
4.5.3	Some Precautions	229
<b>4.6</b>	Summary	234
	References	235
	Problems	235
<b>4S.1</b>	The Graphical Method	W-1
4S.1.1	Methodology of Constructing a Flux Plot	W-1
4S.1.2	Determination of the Heat Transfer Rate	W-2
4S.1.3	The Conduction Shape Factor	W-3
	References	W-6
	Problems	W-6

**CHAPTER 5*****Transient Conduction*****255**

<b>5.1</b>	The Lumped Capacitance Method	256
<b>5.2</b>	Validity of the Lumped Capacitance Method	259
<b>5.3</b>	General Lumped Capacitance Analysis	263
<b>5.4</b>	Spatial Effects	270
<b>5.5</b>	The Plane Wall with Convection	272
5.5.1	Exact Solution	272
5.5.2	Approximate Solution	273
5.5.3	Total Energy Transfer	274
5.5.4	Additional Considerations	275
<b>5.6</b>	Radial Systems with Convection	276
5.6.1	Exact Solutions	276
5.6.2	Approximate Solutions	277
5.6.3	Total Energy Transfer	277
5.6.4	Additional Considerations	278
<b>5.7</b>	The Semi-Infinite Solid	283
<b>5.8</b>	Objects with Constant Surface Temperatures or Surface Heat Fluxes	290
5.8.1	Constant Temperature Boundary Conditions	290
5.8.2	Constant Heat Flux Boundary Conditions	292
5.8.3	Approximate Solutions	293
<b>5.9</b>	Periodic Heating	299

<b>5.10</b>	Finite-Difference Methods	302
5.10.1	Discretization of the Heat Equation: The Explicit Method	302
5.10.2	Discretization of the Heat Equation: The Implicit Method	310
<b>5.11</b>	Summary	317
	References	319
	Problems	319
<b>5S.1</b>	Graphical Representation of One-Dimensional, Transient Conduction in the Plane Wall, Long Cylinder, and Sphere	W-8
<b>5S.2</b>	Analytical Solution of Multidimensional Effects	W-13
	References	W-18
	Problems	W-18

**CHAPTER 6***Introduction to Convection***347**

<b>6.1</b>	The Convection Boundary Layers	348
6.1.1	The Velocity Boundary Layer	348
6.1.2	The Thermal Boundary Layer	349
6.1.3	The Concentration Boundary Layer	350
6.1.4	Significance of the Boundary Layers	352
<b>6.2</b>	Local and Average Convection Coefficients	352
6.2.1	Heat Transfer	352
6.2.2	Mass Transfer	353
6.2.3	The Problem of Convection	355
<b>6.3</b>	Laminar and Turbulent Flow	359
6.3.1	Laminar and Turbulent Velocity Boundary Layers	359
6.3.2	Laminar and Turbulent Thermal and Species Concentration Boundary Layers	361
<b>6.4</b>	The Boundary Layer Equations	364
6.4.1	Boundary Layer Equations for Laminar Flow	365
<b>6.5</b>	Boundary Layer Similarity: The Normalized Boundary Layer Equations	367
6.5.1	Boundary Layer Similarity Parameters	368
6.5.2	Functional Form of the Solutions	368
<b>6.6</b>	Physical Significance of the Dimensionless Parameters	374
<b>6.7</b>	Boundary Layer Analogies	377
6.7.1	The Heat and Mass Transfer Analogy	377
6.7.2	Evaporative Cooling	381
6.7.3	The Reynolds Analogy	384
<b>6.8</b>	The Convection Coefficients	385
<b>6.9</b>	Summary	385
	References	386
	Problems	387
<b>6S.1</b>	Derivation of the Convection Transfer Equations	W-21
6S.1.1	Conservation of Mass	W-21
6S.1.2	Newton's Second Law of Motion	W-22
6S.1.3	Conservation of Energy	W-26
6S.1.4	Conservation of Species	W-28
	References	W-33
	Problems	W-33

**CHAPTER 7**  
**External Flow****401**

<b>7.1</b>	The Empirical Method	403
<b>7.2</b>	The Flat Plate in Parallel Flow	405
7.2.1	Laminar Flow over an Isothermal Plate: A Similarity Solution	405
7.2.2	Turbulent Flow over an Isothermal Plate	410
7.2.3	Mixed Boundary Layer Conditions	411
7.2.4	Unheated Starting Length	412
7.2.5	Flat Plates with Constant Heat Flux Conditions	413
7.2.6	Limitations on Use of Convection Coefficients	414
<b>7.3</b>	Methodology for a Convection Calculation	414
<b>7.4</b>	The Cylinder in Cross Flow	423
7.4.1	Flow Considerations	423
7.4.2	Convection Heat and Mass Transfer	425
<b>7.5</b>	The Sphere	433
<b>7.6</b>	Flow Across Banks of Tubes	436
<b>7.7</b>	Impinging Jets	447
7.7.1	Hydrodynamic and Geometric Considerations	447
7.7.2	Convection Heat and Mass Transfer	449
<b>7.8</b>	Packed Beds	452
<b>7.9</b>	Summary	454
	References	456
	Problems	457

**CHAPTER 8**  
**Internal Flow****485**

<b>8.1</b>	Hydrodynamic Considerations	486
8.1.1	Flow Conditions	486
8.1.2	The Mean Velocity	487
8.1.3	Velocity Profile in the Fully Developed Region	488
8.1.4	Pressure Gradient and Friction Factor in Fully Developed Flow	490
<b>8.2</b>	Thermal Considerations	491
8.2.1	The Mean Temperature	492
8.2.2	Newton's Law of Cooling	493
8.2.3	Fully Developed Conditions	493
<b>8.3</b>	The Energy Balance	497
8.3.1	General Considerations	497
8.3.2	Constant Surface Heat Flux	498
8.3.3	Constant Surface Temperature	501
<b>8.4</b>	Laminar Flow in Circular Tubes: Thermal Analysis and Convection Correlations	505
8.4.1	The Fully Developed Region	505
8.4.2	The Entry Region	512
<b>8.5</b>	Convection Correlations: Turbulent Flow in Circular Tubes	514
<b>8.6</b>	Convection Correlations: Noncircular Tubes and the Concentric Tube Annulus	518
<b>8.7</b>	Heat Transfer Enhancement	521

<b>8.8</b>	Microscale Internal Flow	524
8.8.1	Flow Conditions in Microscale Internal Flow	524
8.8.2	Thermal Considerations in Microscale Internal Flow	525
<b>8.9</b>	Convection Mass Transfer	528
<b>8.10</b>	Summary	531
	References	533
	Problems	534

**CHAPTER 9***Free Convection***559**

<b>9.1</b>	Physical Considerations	560
<b>9.2</b>	The Governing Equations	563
<b>9.3</b>	Similarity Considerations	564
<b>9.4</b>	Laminar Free Convection on a Vertical Surface	566
<b>9.5</b>	The Effects of Turbulence	568
<b>9.6</b>	Empirical Correlations: External Free Convection Flows	571
9.6.1	The Vertical Plate	571
9.6.2	Inclined and Horizontal Plates	574
9.6.3	The Long Horizontal Cylinder	579
9.6.4	Spheres	583
<b>9.7</b>	Free Convection within Parallel Plate Channels	584
9.7.1	Vertical Channels	585
9.7.2	Inclined Channels	587
<b>9.8</b>	Empirical Correlations: Enclosures	587
9.8.1	Rectangular Cavities	587
9.8.2	Concentric Cylinders	590
9.8.3	Concentric Spheres	591
<b>9.9</b>	Combined Free and Forced Convection	593
<b>9.10</b>	Convection Mass Transfer	594
<b>9.11</b>	Summary	595
	References	596
	Problems	597

**CHAPTER 10***Boiling and Condensation***619**

<b>10.1</b>	Dimensionless Parameters in Boiling and Condensation	620
<b>10.2</b>	Boiling Modes	621
<b>10.3</b>	Pool Boiling	622
10.3.1	The Boiling Curve	622
10.3.2	Modes of Pool Boiling	624
<b>10.4</b>	Pool Boiling Correlations	627
10.4.1	Nucleate Pool Boiling	627
10.4.2	Critical Heat Flux for Nucleate Pool Boiling	629
10.4.3	Minimum Heat Flux	629
10.4.4	Film Pool Boiling	630
10.4.5	Parametric Effects on Pool Boiling	631

<b>10.5</b>	Forced Convection Boiling	636
10.5.1	External Forced Convection Boiling	637
10.5.2	Two-Phase Flow	637
10.5.3	Two-Phase Flow in Microchannels	640
<b>10.6</b>	Condensation: Physical Mechanisms	641
<b>10.7</b>	Laminar Film Condensation on a Vertical Plate	643
<b>10.8</b>	Turbulent Film Condensation	646
<b>10.9</b>	Film Condensation on Radial Systems	651
<b>10.10</b>	Film Condensation in Horizontal Tubes	654
<b>10.11</b>	Dropwise Condensation	655
<b>10.12</b>	Summary	655
	References	656
	Problems	657

**CHAPTER 11****Heat Exchangers****669**

<b>11.1</b>	Heat Exchanger Types	670
<b>11.2</b>	The Overall Heat Transfer Coefficient	673
<b>11.3</b>	Heat Exchanger Analysis: Use of the Log Mean Temperature Difference	675
11.3.1	The Parallel-Flow Heat Exchanger	676
11.3.2	The Counterflow Heat Exchanger	679
11.3.3	Special Operating Conditions	679
<b>11.4</b>	Heat Exchanger Analysis: The Effectiveness–NTU Method	686
11.4.1	Definitions	686
11.4.2	Effectiveness–NTU Relations	688
<b>11.5</b>	Heat Exchanger Design and Performance Calculations: Using the Effectiveness–NTU Method	694
<b>11.6</b>	Compact Heat Exchangers	700
<b>11.7</b>	Summary	705
	References	706
	Problems	707
<b>11S.1</b>	Log Mean Temperature Difference Method for Multipass and Cross-Flow Heat Exchangers	W-37
	References	W-41
	Problems	W-41

**CHAPTER 12****Radiation: Processes and Properties****723**

<b>12.1</b>	Fundamental Concepts	724
<b>12.2</b>	Radiation Intensity	727
12.2.1	Mathematical Definitions	727
12.2.2	Radiation Intensity and Its Relation to Emission	728
12.2.3	Relation to Irradiation	733
12.2.4	Relation to Radiosity	735
<b>12.3</b>	Blackbody Radiation	736
12.3.1	The Planck Distribution	737
12.3.2	Wien's Displacement Law	737

12.3.3	The Stefan-Boltzmann Law	738
12.3.4	Band Emission	739
<b>12.4</b>	Emission from Real Surfaces	<b>744</b>
<b>12.5</b>	Absorption, Reflection, and Transmission by Real Surfaces	<b>752</b>
12.5.1	Absorptivity	754
12.5.2	Reflectivity	755
12.5.3	Transmissivity	756
12.5.4	Special Considerations	757
<b>12.6</b>	Kirchhoff's Law	<b>762</b>
<b>12.7</b>	The Gray Surface	<b>764</b>
<b>12.8</b>	Environmental Radiation	<b>770</b>
<b>12.9</b>	Summary	<b>776</b>
	References	780
	Problems	780

**CHAPTER 13***Radiation Exchange Between Surfaces***811**

<b>13.1</b>	The View Factor	<b>812</b>
13.1.1	The View Factor Integral	812
13.1.2	View Factor Relations	813
<b>13.2</b>	Radiation Exchange Between Opaque, Diffuse, Gray Surfaces in an Enclosure	<b>822</b>
13.2.1	Net Radiation Exchange at a Surface	823
13.2.2	Radiation Exchange Between Surfaces	824
13.2.3	Blackbody Radiation Exchange	830
13.2.4	The Two-Surface Enclosure	831
13.2.5	Radiation Shields	832
13.2.6	The Reradiating Surface	835
<b>13.3</b>	Multimode Heat Transfer	<b>839</b>
<b>13.4</b>	Radiation Exchange with Participating Media	<b>842</b>
13.4.1	Volumetric Absorption	843
13.4.2	Gaseous Emission and Absorption	843
<b>13.5</b>	Summary	<b>847</b>
	References	849
	Problems	849

**CHAPTER 14***Diffusion Mass Transfer***879**

<b>14.1</b>	Physical Origins and Rate Equations	<b>880</b>
14.1.1	Physical Origins	880
14.1.2	Mixture Composition	881
14.1.3	Fick's Law of Diffusion	882
14.1.4	Mass Diffusivity	883
<b>14.2</b>	Mass Transfer in Nonstationary Media	<b>885</b>
14.2.1	Absolute and Diffusive Species Fluxes	885
14.2.2	Evaporation in a Column	888
<b>14.3</b>	The Stationary Medium Approximation	<b>893</b>

<b>14.4</b>	Conservation of Species for a Stationary Medium	894
14.4.1	Conservation of Species for a Control Volume	894
14.4.2	The Mass Diffusion Equation	894
14.4.3	Stationary Media with Specified Surface Concentrations	897
<b>14.5</b>	Boundary Conditions and Discontinuous Concentrations at Interfaces	900
14.5.1	Evaporation and Sublimation	901
14.5.2	Solubility of Gases in Liquids and Solids	902
14.5.3	Catalytic Surface Reactions	905
<b>14.6</b>	Mass Diffusion with Homogeneous Chemical Reactions	908
<b>14.7</b>	Transient Diffusion	911
<b>14.8</b>	Summary	916
	References	917
	Problems	917

**APPENDIX A*****Thermophysical Properties of Matter***

927

**APPENDIX B*****Mathematical Relations and Functions***

959

**APPENDIX C*****Thermal Conditions Associated with Uniform Energy Generation in One-Dimensional, Steady-State Systems***

965

**APPENDIX D*****The Convection Transfer Equations***

973

<b>D.1</b>	Conservation of Mass	974
<b>D.2</b>	Newton's Second Law of Motion	974
<b>D.3</b>	Conservation of Energy	975
<b>D.4</b>	Conservation of Species	976

**APPENDIX E*****Boundary Layer Equations for Turbulent Flow***

977

**APPENDIX F*****An Integral Laminar Boundary Layer Solution for Parallel Flow over a Flat Plate***

981

***Index***

985
