
Contents

Preface xv

Acknowledgments xvii

1 Chemical Thermodynamics and Flame Temperatures

- A. Introduction 1
- B. Heats of Reaction and Formation 1
- C. Free Energy and the Equilibrium Constants 8
- D. Flame Temperature Calculations 15
 - 1. Analysis 15
 - 2. Practical Considerations 20
- Problems 30
- References 33

2 Chemical Kinetics

- A. Introduction 35
- B. Rates of Reactions and Their Temperature Dependence 35

- 1. The Arrhenius Rate Expression 37
- 2. Transition State and Recombination Rate Theories 40
- C. Simultaneous Interdependent Reactions 44
- D. Chain Reactions 45
- E. Pseudo-First-Order Reactions and the "Fall-Off" Range 48
- F. The Partial Equilibrium Assumption 51
- G. Pressure Effect in Fractional Conversion 52
- Problems 53
- References 54

3

Explosive and General Oxidative Characteristics of Fuels

- A. Introduction 57
- B. Chain Branching Reactions and Criteria for Explosion 57
- C. Explosion Limits and Oxidation Characteristics of Hydrogen 65
- D. Explosion Limits and Oxidation Characteristics of Carbon Monoxide 72
- E. Explosion Limits and Oxidation Characteristics of Hydrocarbons 76
 - 1. Organic Nomenclature 77
 - 2. Explosion Limits 81
 - 3. "Low-Temperature" Hydrocarbon Oxidation Mechanisms 84
- F. The Oxidation of Aldehydes 88
- G. The Oxidation of Methane 90
 - 1. Low-Temperature Mechanism 90
 - 2. High-Temperature Mechanism 92
- H. The Oxidation of Higher-Order Hydrocarbons 94
 - 1. Aliphatic Hydrocarbons 94
 - 2. Alcohols 104
 - 3. Aromatic Hydrocarbons 106
- Problems 116
- References 116

4 Flame Phenomena in Premixed Combustible Gases

- A. Introduction 119
- B. Laminar Flame Structure 123
- C. The Laminar Flame Speed 125
 - 1. The Theory of Mallard and Le Chatelier 127
 - 2. The Theory of Zeldovich, Frank-Kamenetskii, and Semenov 132
 - 3. Comprehensive Theory and Laminar Flame Structure Analysis 139
 - 4. The Laminar Flame and the Energy Equation 147
 - 5. Flame Speed Measurements 147
 - 6. Experimental Results—Physical and Chemical Effects 155
- D. Stability Limits of Laminar Flames 162
 - 1. Flammability Limits 162
 - 2. Quenching Distance 170
 - 3. Flame Stabilization (Low Velocity) 171
 - 4. Stability Limits and Design 177
- E. Turbulent Reacting Flows and Turbulent Flames 181
 - 1. The Rate of Reaction in a Turbulent Field 183
 - 2. Regimes of Turbulent Reacting Flows 185
 - 3. The Turbulent Flame Speed 197
- F. Stirred Reactor Theory 200
- G. Flame Stabilization in High-Velocity Streams 205
- Problems 215
- References 218

5 Detonation

- A. Introduction 221
 - 1. Premixed and Diffusion Flames 221
 - 2. Explosion, Deflagration, and Detonation 222
 - 3. The Onset of Detonation 222
- B. Detonation Phenomena 224
- C. Hugoniot Relations and the Hydrodynamic Theory of Detonations 226
 - 1. Characterization of the Hugoniot Curve and the Uniqueness of the Chapman–Jouguet Point 227
 - 2. Determination of the Speed of Sound in the Burned Gases for Conditions above the Chapman–Jouguet Point 235

- 3. Calculation of the Detonation Velocity 240
- D. Comparison of Detonation Velocity Calculations with Experimental Results 243
- E. The ZND Structure of Detonation Waves 249
- F. The Structure of the Cellular Detonation Front and Other Detonation Phenomena Parameters 252
 - 1. The Cellular Detonation Front 252
 - 2. The Dynamic Detonation Parameters 258
 - 3. Detonation Limits 259
- G. Detonations in Nongaseous Media 263
- Problems 264
- References 265

6 Diffusion Flames

- A. Introduction 267
- B. Gaseous Fuel Jets 268
 - 1. Appearance 268
 - 2. Structure 271
 - 3. Theoretical Considerations 274
 - 4. The Burke-Schumann Development 277
 - 5. Turbulent Fuel Jets 283
- C. Burning of Condensed Phases 285
 - 1. General Mass Burning Considerations and the Evaporation Coefficient 287
 - 2. Single Fuel Droplets in Quiescent Atmospheres 291
- D. Burning of Droplet Clouds 312
- E. Burning in Convective Atmospheres 313
 - 1. The Stagnant Film Case 313
 - 2. The Longitudinally Burning Surface 315
 - 3. The Flowing Droplet Case 317
 - 4. Burning Rates of Plastics: The Small B Assumption and Radiation Effects 319
- Problems 321
- References 323

7 Ignition

- A. Concepts 325
- B. Chain Spontaneous Ignition 328
- C. Thermal Spontaneous Ignition 330

1. Semenov Approach of Thermal Ignition 331
2. Frank-Kamenetskii Theory of Thermal Ignition 335
- D. Forced Ignition 341
 1. Spark Ignition and Minimum Ignition Energy 342
 2. Ignition by Adiabatic Compression and Shock Waves 347
- Problems 348
- References 348

8

Environmental Combustion Considerations

- A. Introduction 351
- B. The Nature of Photochemical Smog 352
 1. Primary and Secondary Pollutants 353
 2. The Effect of NO_x 353
 3. The Effect of SO_x 357
- C. Formation and Reduction of Nitrogen Oxides 359
 1. The Structure of the Nitrogen Oxides 360
 2. The Effect of Flame Structure 361
 3. Reaction Mechanisms of Oxides of Nitrogen 362
 4. The Reduction of NO_x 378
- D. SO_x Emissions 383
 1. The Product Composition and Structure of Sulfur Compounds 384
 2. Oxidative Mechanisms of Sulfur Fuels 385
- E. Particulate Formation 398
 1. Characteristics of Soot 399
 2. Soot Formation Processes 400
 3. Experimental Systems and Soot Formation 401
 4. Sooting Tendencies 403
 5. Detailed Structure of Sooting Flames 413
 6. Chemical Mechanisms of Soot Formation 417
 7. The Influence of Physical and Chemical Parameters on Soot Formation 420
- F. Stratospheric Ozone 424
 1. The HO_x Catalytic Cycle 425
 2. The NO_x Catalytic Cycle 426
 3. The ClO_x Catalytic Cycle 428
- Problems 430
- References 430

9**Combustion of Nonvolatile Fuels**

- A. Carbon Char, Soot, and Metal Combustion 435
- B. Metal Combustion Thermodynamics 436
 - 1. The Criterion for Vapor-Phase Combustion 436
 - 2. Thermodynamics of Metal–Oxygen Systems 437
 - 3. Thermodynamics of Metal–Air Systems 448
 - 4. Combustion Synthesis 451
- C. Diffusional Kinetics 457
- D. Diffusion-Controlled Burning Rate 459
 - 1. Burning of Metals in Nearly Pure Oxygen 460
 - 2. The Burning of Carbon Char Particles 462
 - 3. The Burning of Boron Particles 466
 - 4. Oxidation of Very Small Particles—Pulverized Coal and Soot 468
- E. The Burning of Porous Chars 475
- F. The Burning Rate of Ash-Forming Coal 478
- Problems 480
- References 480

Appendixes—Richard A. Yetter

- A. Thermochemical Data and Conversion Factors 487
- B. Specific Reaction Rate Constants 547
- C. Bond Dissociation Energies of Hydrocarbons 567
- D. Laminar Flame Speeds 575
- E. Flammability Limits in Air 581
- F. Spontaneous Ignition Temperature Data 589
- G. Minimum Spark Ignition Energies and Quenching Distances 605
- H. Programs for Combustion Kinetics 609
