Part I Retrospective on Line-Broadening Analysis

1 Line Profile Analysis: A Historical Overview

<i>J.I. Langford</i>	3
1.1 Early Years	3
1.2 Bertram E. Warren (1902–1991)	4
1.3 Arthur J.C. Wilson (1914–1995)	5
1.4 The Parrish Diffractometer	6
1.5 Williamson–Hall Plot	6
1.6 Fourier Methods	7
1.7 Variance Method	8
1.8 Further Development of Fourier Methods	8
1.9 Powder Pattern Fitting	10
1.10 Whole Powder Pattern Modelling	11
References	11

Part II Analysis of the Full Diffraction Pattern

2 Convolution Based Profile Fitting

<i>A. Kern, A.A. Coelho, R.W. Cheary</i>	17
2.1 Introduction	17
2.2 Convolution Based Profile Fitting	19
2.2.1 General Considerations	19
2.2.2 Numerical Procedures of Convolution Based Profile Fitting	21
2.2.3 The Wavelength Distribution in Laboratory Diffractometers	21
2.2.4 Examples	26
2.3 Fundamental Parameters Approach	29
2.3.1 General Considerations to FPA	29
2.3.2 Applicability of the FPA	31
2.3.3 Diffractometer Configurations and Their Geometrical Aberrations	31
2.3.4 Geometric Instrument Aberrations	32

2.3.5	Examples	42
2.4	Convolution Based Profile Fitting versus Analytical Profile Fitting	46
2.4.1	Quality of Fit	46
2.4.2	Number of Fit Parameters Required	47
2.5	Conclusions	48
	References	49

3 Whole Powder Pattern Modelling:

Theory and Applications

	<i>P. Scardi, M. Leoni</i>	51
3.1	Introduction	51
3.2	Theoretical Basis of WPPF and WPPM	55
3.2.1	Basic Expressions for the Diffracted Intensity from a Defected Material	55
3.2.2	Line Profile Components	57
3.2.3	WPPM and WPPF	72
3.3	Experimental	75
3.4	Application of WPPM	75
3.4.1	WPPM Results for Ball-Milled Ni Powders	75
3.5	Comparison between TEM and WPPM Data	85
3.6	Conclusions	88
	References	89

4 Full Profile Analysis of X-ray Diffraction Patterns for Investigation of Nanocrystalline Systems

	<i>S.V. Tsybulya, S.V. Cherepanova, G.N. Kryukova</i>	93
4.1	The peculiarities of Structural Analysis of Nanocrystalline Materials	94
4.2	Crystal Structure Refinement Using the Modified Rietveld Method	97
4.3	Microstructure Modelling and Full Powder Pattern Simulation Using the Kakinoki-Komura Method	102
4.3.1	The Choice of the Simulation Algorithm	102
4.3.2	The Theory of Scattering by a 1D Disordered Crystal ..	103
4.3.3	Disorders of the First and Second Types: A Generalized Algorithm for Microstrain Account	107
4.4	Program Description	109
4.5	Simulation of the XRD Patterns of Nanocrystalline Materials: Some Examples	110
4.5.1	Filamentary Carbons	110
4.5.2	Metallic Cobalt	112
4.5.3	Metastable In-Ni Alloys	117
4.6	Conclusion	120
	References	121

5 Crystallite Size and Residual Strain/Stress Modeling in Rietveld Refinement

<i>D. Balzar, N.C. Popa</i>	125
5.1 Introduction	125
5.2 Modeling of the Crystallite-Size Broadened Line Profile in Rietveld Refinement	126
5.2.1 Background	126
5.2.2 The Crystallite-Size Broadened Line Profile and Size Distribution	128
5.2.3 Application to the Lognormal Size Distribution: Isotropic Case	128
5.2.4 Determination of the Distribution Parameters	129
5.2.5 The Analytical Approximation for $\Phi(\chi)$	131
5.2.6 Limitations of the Common Analytical Approximations of the Size-Broadened Profile	132
5.2.7 The Anisotropic Crystallite Shape	132
5.2.8 Application to Two Cubic Ceria Samples	133
5.2.9 Conclusion	135
5.3 Modeling of Residual Strain/Stress in Rietveld Refinement	136
5.3.1 Background	136
5.3.2 The Measured Strain, the Average Strain and Stress Tensors	137
5.3.3 The Strain Expansion in Generalized Spherical Harmonics	139
5.3.4 The Selection Rules for All Laue Classes	141
5.3.5 Determination of Average Strain and Stress Tensors	142
5.3.6 Conclusion	143
5.4 Concluding Remarks	144
References	144

6 The Quantitative Determination of the Crystalline and the Amorphous Content by the Rietveld Method: Application to Glass Ceramics with Different Absorption Coefficients

<i>A.F. Gualtieri, A. Guagliardi, A. Iseppi</i>	147
6.1 Introduction	148
6.2 Experimental	151
6.2.1 Sample Selection and Preparation	151
6.2.2 Calculation of the Linear Absorption Coefficient	154
6.2.3 Data Collection for the QPA	154
6.2.4 Rietveld Refinements	155
6.3 Results and Discussion	156
6.4 Conclusions and Future Perspectives	163
References	163

7 Quantitative Analysis of Amorphous Fraction in the Study of the Microstructure of Semi-crystalline Materials

P. Riello 167

7.1 Introduction 167

7.2 A Short Historical Introduction to the Standardless Quantitative Methods 168

7.3 A Rietveld Based Solution 171

7.4 Examples 177

7.4.1 Example 1: Study of a Supported Metal Catalyst 177

7.4.2 Example 2: Nucleation of Glass Ceramic Materials in the System $\text{Li}_2\text{O}-\text{Al}_2\text{O}_3-\text{SiO}_2$ 181

7.5 Conclusion 183

References 184

Part III Crystallite Size and Shape

8 A Bayesian/Maximum Entropy Method for the Certification of a Nanocrystallite-Size NIST Standard Reference Material

N. Armstrong, W. Kalceff, J.P. Cline, J. Bonevich 187

8.1 Introduction 187

8.2 Nanocrystallite-Size Broadening of X-ray Line Profiles 190

8.2.1 Size-Broadened Profiles 190

8.2.2 Observed Line Profiles 194

8.3 Developing the Inverse Problem 195

8.3.1 Forward Mapping 195

8.3.2 Inverse Problem 195

8.4 Axioms for Inductive Reasoning 197

8.4.1 Two Basic Axioms 197

8.4.2 Bayes' Theorem 198

8.4.3 Marginalisation or "Integrating Out" 199

8.5 Developing a "Method" for Determining $P(\mathbf{D})$ 199

8.5.1 Bayes' Theorem for $P(\mathbf{D})$ 199

8.5.2 Likelihood and Entropy Functions 200

8.5.3 Combining S and L 202

8.5.4 What to Do with α ? 202

8.5.5 Determining $f(2\theta)$ 204

8.5.6 Derivation of Langford et al. (2000) 205

8.6 Analysis of CeO_2 X-ray Diffraction Data 206

8.6.1 XRD Details 206

8.6.2 TEM Details 207

8.6.3 Identifying Specimen Broadening 208

8.6.4 Determining the $P(\mathbf{D})$ Using the Bayesian/MaxEnt Method 215

8.6.5	TEM Size Distribution	221
8.6.6	Comparison of Methods	222
8.7	Discussion	223
	References	225

**9 Study of Submicrocrystalline Materials
by Diffuse Scattering in Transmitted Wave**

	<i>R. Kužel, V. Holý, M. Čerňanský, J. Kuběna, D. Šimek, J. Kub</i>	229
9.1	Introduction	229
9.2	Theoretical Background	231
9.3	Experimental Setup and Evaluation	235
9.3.1	Determination of the Autocorrelation Function by Transformation of Measured Data	236
9.3.2	Evaluation by the Fitting of Measured Data	236
9.4	Results and Discussion	237
9.5	Conclusions	244
	References	245

Part IV Dislocations and Stacking Faults

**10 Determining the Dislocation Contrast Factor
for X-ray Line Profile Analysis**

	<i>N. Armstrong, P. Lynch</i>	249
10.1	Introduction	249
10.2	X-ray Line-Profile Broadening	251
10.2.1	Quantifying the Line-Broadening	251
10.2.2	Quantifying the Dislocation Broadening	252
10.3	Dislocation Contrast Factors, C_{hkl}	253
10.3.1	Evaluating the Contrast Factor, C_{hkl}	253
10.3.2	Determining the Dislocation Displacement Fields	258
10.4	Computing the Contrast Factor, C_{hkl}	262
10.4.1	C_{hkl} Values for fcc Materials	263
10.4.2	C_{hkl} Values for bcc Materials	271
10.4.3	An Unusual Case	273
10.5	Conclusion	278
A	Transforming the Elastic Constants and Diffraction Vector	281
A.1	Transforming the Elastic Constants	281
A.2	Transforming the Diffraction Vector	282
B	Determining A , L and D for $\mathbf{u}(x_1, x_2)$	282
B.1	General Field Equations	282
B.2	Determining the Reduced Elastic Compliances	283
B.3	Determining the Compliance Polynomial	284
B.4	Determining the L Matrix	284
B.5	Determining the $A_{k\alpha}$ Coefficients	284

B.6	Determining the D_α Coefficients	285
References	285
11 X-ray Peak Broadening		
Due to Inhomogeneous Dislocation Distributions		
	<i>I. Groma, A. Borbély</i>	287
11.1	Introduction	287
11.2	Properties of the Fourier Transform of Intensity Distribution Induced by Dislocations	289
11.3	Peak Broadening Due to Narrow Dislocation Dipoles	294
11.4	Asymptotic Properties of the Intensity Distribution	295
11.5	Evaluation Procedure	297
11.6	Influence of the Finite Coherent Domain Size	301
11.7	Conclusions	304
References	306
12 Determination of Non-uniform Dislocation Distributions in Polycrystalline Materials		
	<i>J.-D. Kamminga, L.J. Seijbel, R. Delhez</i>	309
12.1	Introduction	309
12.2	Theory	311
12.2.1	Background	311
12.2.2	Analysis for Different Kinds of Polycrystalline Specimens	313
12.3	Experimental Illustrations	317
12.3.1	Al Layers	317
12.3.2	Ni Layers	323
12.4	Discussion	327
12.5	Conclusions	329
References	330
13 Line Profile Fitting: The Case of fcc Crystals Containing Stacking Faults		
	<i>A.I. Ustinov, L.O. Olikhovska, N.M. Budarina, F. Bernard</i>	333
13.1	Introduction	333
13.2	Influence of Stacking Faults on XRD Powder Peak Profiles	334
13.2.1	Description of the Structures Containing Stacking Faults	334
13.2.2	Calculation Procedure for the Intensity Scattered by a Single-Crystal	338
13.2.3	Calculation Procedure for the Intensity Scattered by a Powder	339
13.2.4	Intrinsic Stacking Faults (hh)	341
13.2.5	Extrinsic Stacking Faults ($hc'h$)	343
13.2.6	Twin Stacking Faults (h)	344

13.2.7	Determination of the Dominant Type of SF from the XRD Powder Diagram	347
13.3	Simulation Procedure for “Real” XRD Powder Peak Profiles	349
13.4	Defect and Microstructure Analysis of Ball-Milled Cu Powders by XRD	353
13.4.1	Preparation and Characterization of the Powders	353
13.4.2	Full Profile Fitting	354
13.5	Conclusion	358
	References	359

Part V Grain Interaction

14 Diffraction Elastic Constants and Stress Factors; Grain Interaction and Stress in Macroscopically Elastically Anisotropic Solids; The Case of Thin Films

	<i>U. Welzel, M. Leoni, E.J. Mittemeijer</i>	363
14.1	Introduction	363
14.2	Theoretical Background	366
14.2.1	Frames of Reference	366
14.2.2	Euler Angles and the Crystallographic Orientation Distribution Function (ODF)	367
14.2.3	Calculation of Averages of Tensors	368
14.2.4	Mechanical Elastic Constants	369
14.2.5	Diffraction Elastic Constants and Stress Factors	370
14.2.6	Principle of Diffraction Stress Analysis	371
14.2.7	Effective Grain Interaction	371
14.3	Direction-Dependent Grain Interaction	373
14.3.1	The Vook–Witt Model	374
14.3.2	Recent Developments	377
14.4	Surface Anisotropy as a Special Case of Direction Dependent Grain Interaction	386
14.5	Conclusion	388
	References	389

15 Interaction between Phases in Co-deforming Two-Phase Materials: The Role of Dislocation Arrangements

	<i>R.E. Bolmaro, H.-G. Brokmeier, J.W. Signorelli, A. Fourty, M.A. Bertinetti</i>	391
15.1	Introduction	391
15.2	Grain Interaction Assessment	392
15.2.1	Strain Interaction	392
15.2.2	Spin Interaction	396

15.3	Results	402
15.3.1	Extruded Al–Cu	404
15.3.2	Extruded Cu–Fe	406
15.3.3	Cu Torsion	407
15.4	Discussion and Conclusions	407
15.4.1	What does Our Model Provide?	407
15.4.2	What Do We Need?	408

Part VI Surface and Interface Effects

16 Grain Surface Relaxation Effects in Powder Diffraction

	<i>M. Leoni, P. Scardi</i>	413
16.1	Introduction	413
16.2	Surface Relaxation	414
16.3	Surface Relaxation Models in Powder Diffraction	417
16.3.1	State of the Art	417
16.3.2	Proposed Model of Effective Grain Surface Relaxation	422
16.4	Experimental Validation: Nanocrystalline Cerium Oxide Powders	432
16.5	Conclusions	452
	References	452

17 Interface Stress in Polycrystalline Materials

	<i>R. Birringer, M. Hoffmann, P. Zimmer</i>	455
17.1	Introduction and Basic Ideas	455
17.2	Theory and Methodology	457
17.3	Experiments and Discussion	462
17.4	Outlook	466
	References	468

Part VII Microstructural Gradients; Thin Films

18 Problems Related to X-Ray Stress Analysis in Thin Films in the Presence of Gradients and Texture

	<i>C. Genzel</i>	473
18.1	Introduction	473
18.2	Residual Stress in Thin Films: Its Origin and Possible Stress States	474
18.2.1	Extrinsic and Intrinsic Film Stresses	474
18.2.2	Possible Macrostress States in Thin Films	475
