Foreword ix

Preface xi

Chapter 1 Noninteracting Electron Gas 1

Problems 8

Chapter 2 Born-Oppenheimer Approximation 9

2.1 Basic Hamiltonian 9
2.2 Adiabatic Approximation 10
2.3 Reduced- Electron Problem 15
References 15

Chapter 3 Second Quantization 17

3.1 Bosons 17
3.2 Fermions 19
3.3 Fermion Operators 20
Problems 24
References 25

Chapter 4 Hartree-Fock Approximation 27

4.1 Noninteracting Limit 27
4.2 Hartree-Fock Approximation 29
4.3 Diagrams 32
Problems 33
References 33

Chapter 5 Interacting Electron Gas 3S

5.1 Uniform Electron Gas 36
5.2 Hartree-Fock Excitation Spectrum 39
5.3 Cohesive Energy of Metals 41
5.4 Summary 49
Problems 49
References 50

Chapter 6 Local Magnetic Moments in Metals 53

6.1 Local Moments: Phenomenology 53
6.2 Mean-Field Solution 57
6.3 Summary 69
Problems 69
References 70

Chapter 7 Quenching of Local Moments: The Kondo Problem 71

7.1 Kondo Hamiltonian 74
7.2 Why lsI Negative? 75
7.3 Scattering and the Resistivity Minimum 80
7.4 Electron-Impurity Scattering Amplitudes 88
7.5 Kondo Temperature 94
7.6 Poor Man's Scaling 97
7.7 Summary 106
7.8 Appendix: The Schrieffer- Wolff Transformation 106
Problems 112
References 112

Chapter 8 Screening and Plasmons 115

8.1 Thomas-Fermi Screening 115
8.2 Plasma Oscillations 118
8.3 Linear-Response Theory 121
8.4 Dielectric- Response Function 127
8.5 Stopping Power of a Plasma 141
8.6 Summary 146
Problems 146
References 147

Chapter 9 Bosonization 149

9.1 Luttinger Liquid 150
9.2 Pair Binding: Can Electrons Do It Alone? 165
9.3 Excitation Spectrum 167

9.4 Summary 172
Problems 173
References 173

Chapter 10 Electron-Lattice Interactions 175

10.1 Harmonic Chain 175
10.2 Acoustic Phonons 178
10.3 Electron- Phonon Interaction 179
10.4 Ultrasonic Attenuation 184
10.5 Electrical Conduction 186
10.6 Hydrodynamic Limit: Phonon Drag 197
10.7 Sound Propagation 199
10.8 Summary 202
Problems 203
References 203

Chapter 11 Superconductivity 205

11.1 Superconductivity: Phenomenology 206
11.2 Electron-Phonon Effective Interaction 214
11.3 Model Interaction 217
11.4 Cooper Pairs 219
11.5 Fermi-Liquid Theory 224
11.6 Pair Amplitude 228
11.7 BCS Ground State 234
11.8 Pair Fluctuations 237
11.9 Ground State Energy 239
11.10 Critical Magnetic Field 243
11.11 Energy Gap 244
11.12 Quasi-Particle Excitations 247
11.13 Thermodynamics 251
11.14 Experimental Applications 256
11.15 Josephson Tunneling 271
11.16 Summary 273
Problems 274
References 275

Chapter 12 **Localization: The Strong, the Weak, and the Defiant 277**

12.1 Primer on Localization 278
12.2 Strong Localization: The Anderson Transition 281
12.3 Scaling Theory 285
12.4 Weak Localization 291
12.5 The Defiant: Exceptions to Localization 299
12.6 Summary 313
Problems 313
References 315

Chapter 13 **Quantum Phase Transitions 319**

13.1 Quantum Rotor Model 322
13.2 Scaling 324
13.3 Mean-Field Solution 328
13.4 Landau-Ginsburg Theory 335
13.5 Transport Properties 340
13.6 Experiments 342
13.7 Summary 345
Problems 346
References 347

Chapter 14 **Quantum Hall Effect 349**

14.1 What Is Quantum about the Hall Effect? 349
14.2 Landau Levels 354
14.3 The Role of Disorder 357
14.4 Currents at the Edge 359
14.5 Laughlin Liquid 364
14.6 Summary 372
References 372

Index 375
