*List of Symbols*   **xxv**

*To the Student*   **xxix**

## **PART I   Fundamentals**

- 1.   *Basic Concepts and Definitions*   1**
  - 1.1   What is Engineering?   1**
  - 1.2   What is Thermodynamics?   3**
  - 1.3   Definition of Engineering Thermodynamics   6**
  - 1.4   Applications of Engineering Thermodynamics   6**
  - 1.5   Relevancy of Other Engineering Sciences   16**
  - 1.6   Macroscopic and Microscopic Views of Matter   16**
  - 1.7   Dimensions and Units   18**
  - 1.8   Thermodynamic Systems   23**
  - 1.9   Thermodynamic Properties   25**
  - 1.10   Thermodynamic Equilibrium and Equilibrium States   27**
  - 1.11   Thermodynamic Processes   28**
  - 1.12   Temperature, the Zeroth Law of Thermodynamics, and Thermal Equilibrium   30**
  - 1.13   Pressure and Mechanical Equilibrium   33**
  - 1.14   Chemical Potential and Chemical Equilibrium   35**
  - 1.15   Simple Structure of Engineering Thermodynamics   36**
  - 1.16   General Methodology for Problem Solving in Engineering Thermodynamics   39**
    - Problems   40**

**2. *Energy and the First Law of Thermodynamics* 49**

- 2.1 Energy Content 49
- 2.2 Conservation of Mass 53
- 2.3 First Law of Thermodynamics for a Closed System 54
- 2.4 First Law of Thermodynamics for Cyclic Processes 56
- 2.5 Thermodynamic Definition of Work 59
- 2.6 Sign Convention for Work 60
- 2.7 Quasi-static Work of Expansion 60
- 2.8 Other Quasi-static Work Modes 65
- 2.9 Summary of Work Interactions 67
- 2.10 Thermodynamic Definition of Heat 68
- 2.11 Enthalpy—A Thermodynamic Property 69
- 2.12 First Law of Thermodynamics for an Open System 70
- 2.13 Conservation of Mass for an Open System 74
- 2.14 Thermodynamic Reservoirs 75
- 2.15 Fundamental Nature of Energy 76
- Problems 77

**3. *Entropy and the Second Law of Thermodynamics* 87**

- 3.1 Entropy and Quality of Energy 87
- 3.2 Entropy Change of a Work Reservoir 89
- 3.3 Entropy Change of a Heat Reservoir 90
- 3.4 Heat Transfer Between Two Heat Reservoirs 91
- 3.5 Efficiencies of Heat Engines 92
- 3.6 Efficiencies of Refrigerators and Heat Pumps 97
- 3.7 Examples of Irreversible Processes 99
- 3.8 Second Law of Thermodynamics for a Closed System 103

- 3.9 Second Law of Thermodynamics for an Open System **105**
- 3.10 The Concept of Lost Work **107**
- 3.11 Entropy, Equilibrium, and Direction of Change **112**
- 3.12 Fundamental Nature of Entropy **116**  
Problems **117**

#### **4. *Equations of State of a Pure Substance in Graphical and Tabular Forms* **125****

- 4.1 The State Postulate **126**
- 4.2 Definition of a Pure Substance **127**
- 4.3 State Postulate of a Simple Compressible Substance **128**
- 4.4 Some Important General Thermodynamic Relations for a Simple Compressible Substance **130**
- 4.5 The  $p$ - $v$ - $T$  Surface of a Simple Compressible Substance **132**
- 4.6 Thermodynamic Diagrams for a Simple Compressible Substance **136**
- 4.7 Constant-Volume Specific Heat and Constant-Pressure Specific Heat **145**
- 4.8 Tables of Thermodynamic Properties for a Simple Compressible Substance **147**
- 4.9 Interpolation of Tabulated Data **150**
- 4.10 Examples on Property Evaluation and on Property Changes Due to a Change of State **154**  
Problems **168**

#### **5. *Behavior and Thermodynamic Properties of Ideal Gases* **177****

- 5.1 Definition of an Ideal Gas **177**
- 5.2 Important Consequences of the Ideal-Gas Model **183**
- 5.3 Internal Energy Change of an Ideal Gas **184**
- 5.4 Enthalpy Change of an Ideal Gas **185**

- 5.5 Specific Heats of an Ideal Gas 185
- 5.6 Entropy Change of an Ideal Gas 187
- 5.7 Thermodynamic Diagrams for an Ideal Gas 190
- 5.8 Tabulation of Thermodynamic Properties for an Ideal Gas 193
- 5.9 Isentropic Process for an Ideal Gas 198
- 5.10 Reversible Polytropic Process for an Ideal Gas 199
- Problems 204

## 6. *Some Consequences of the Second Law of Thermodynamics with an Introduction to Multicomponent Systems* 213

- 6.1 Carnot Cycle and Thermodynamic Temperature Scale 213
- 6.2 Carnot Cycle Using an Ideal Gas as the Working Fluid 217
- 6.3 Equivalence of the Thermodynamic and Ideal-Gas Empirical Temperature 219
- 6.4 Absolute Zero, Absolute Entropy, and the Third Law of Thermodynamics 221
- 6.5 The Inequality of Clausius 224
- 6.6 Quasi-static Heat Transfer for a Closed System 226
- 6.7 Another Look at the Entropy Change of a Heat Reservoir 229
- 6.8 The Concept of Availability 230
- 6.9 Availability for Steady-State Steady Flow 237
- 6.10 Chemical Potential and the Gibbs Function 243
- 6.11 Temperature As the Driving Force for Heat Transfer 247
- 6.12 Pressure As the Driving Force for Volume Change 249
- 6.13 Chemical Potential As the Driving Force for Matter Flow 250
- 6.14 Gibbs Phase Rule for Nonreacting System 252
- Problems 254

**PART II Applications**

- 7. *Engineering Analysis of Processes for Closed Systems* 267**
  - 7.1 Constant-Volume Process 267
  - 7.2 Constant-Pressure Process 274
  - 7.3 Isothermal Process 278
  - 7.4 Adiabatic Process 282
  - 7.5 Constant-Internal-Energy Process 283
  - Problems 284
  
- 8. *Engineering Analysis of Processes for Open Systems* 297**
  - 8.1 Unique Characteristics of Open Systems with Steady-State Steady Flow 297
  - 8.2 Functional Classifications of Steady-State Steady-Flow Devices 298
  - 8.3 Ideal Shaft Work for a Steady-State Steady-Flow Device 299
  - 8.4 Pumps and Compressors 300
  - 8.5 Turbines 303
  - 8.6 Throttling Devices 308
  - 8.7 Heat Exchangers 313
  - 8.8 Steady-Flow Open Systems Consisting of More Than One Steady-State Steady-Flow Device 323
  - 8.9 Open Systems with Non-Steady-State Steady Flow 342
  - Problems 353
  
- 9. *Thermodynamics of One-Dimensional Steady Flow of Fluids* 369**
  - 9.1 Energy Equation for One-Dimensional Steady Flow with No Work Transfer 370
  - 9.2 Bernoulli Equation for Incompressible Fluid 376

- 9.3 Derivation of the Bernoulli Equation from the Momentum Principle 378
- 9.4 Sonic Velocity and Mach Number 386
- 9.5 Stagnation Properties 391
- 9.6 Variation of Velocity and Pressure for Adiabatic Flow Through Passage with Varying Area 393
- 9.7 Nozzle and Diffuser Efficiencies 396
- 9.8 Mass Flow Through a Converging Nozzle 403
- 9.9 Adiabatic Flow in Constant-Area Pipe 408
  - Problems 415

**10. *Availability, Irreversibility, and Availability Analysis of Engineering Processes* 425**

- 10.1 Availability (Exergy) Equation for a Closed System 426
- 10.2 Second-Law Analysis of Closed Systems 429
- 10.3 Availability (Exergy) Equation for an Open System 438
- 10.4 Second-Law Analysis of Open Systems 440
- 10.5 Second-Law Efficiency 448
  - Problems 469

**11. *Power-Producing, Combined-Cycle, and Cogeneration Systems* 481**

- 11.1 Decision Making in Power-Plant Design 481

**Vapor Power Cycles**

- 11.2 Carnot Vapor Cycle 484
- 11.3 Simple Rankine Cycle 486
- 11.4 Rankine Cycle with Superheat 494
- 11.5 Rankine Cycle with Reheat 503
- 11.6 Rankine Cycle with Regenerative Feedwater Heating 506
- 11.7 Alternative Working Fluids for Vapor Power Cycles 513

**Gas Power Cycles**

- 11.8** Air-Standard Cycles **513**
- 11.9** Carnot Gas Cycle **515**
- 11.10** Otto Cycle **520**
- 11.11** Diesel Cycle **524**
- 11.12** Wankel Rotary Combustion Engine **528**
- 11.13** Stirling Cycle **531**
- 11.14** Brayton Cycle **533**
- 11.15** Simple Gas-Turbine Power Plant with Real Compressor and Turbine **537**
- 11.16** Closed-Cycle Gas-Turbine Power Plant with Real Compressor and Turbine and Pressure Drops in Heat Exchangers **541**
- 11.17** Brayton Cycle with Regenerative Heating **550**
- 11.18** Regenerative Gas-Turbine Power Plant with Real Compressor, Turbine, Generator, and Pressure Drops in Heat Exchangers **552**
- 11.19** Thermal Efficiency of a Combined Power Plant **561**
- 11.20** Cogeneration Systems **563**
- 11.21** Gas-Turbine Cogeneration System **566**
- 11.22** The Cheng Cycle Engine and Cogeneration Problems **575**

**12. Refrigeration and Heat Pump Systems 595**

- 12.1** Decision Making in Refrigeration System Design **597**
- 12.2** Reversed Carnot Cycle **598**
- 12.3** Vapor-Compression Refrigeration Cycle **599**
- 12.4** Gas Refrigeration Cycle **602**
- 12.5** Gas Refrigeration Cycle with Real Compressor, Turbine, and Pressure Drops in Heat Exchangers **606**
- 12.6** Reversed Brayton Cycle with Regenerative Heat Transfer **611**

- 12.7 Regenerative Gas Refrigeration Cycle with Real Compressor, Turbine, and Pressure Drops in Heat Exchangers 614
- 12.8 Production of Refrigeration Using Heat Instead of Work 619
- 12.9 Absorption Refrigeration System 621
- 12.10 Production of Low-Temperature Heat Using a Power Generation-Heat Pump System 623
- 12.11 Heat Pumps 625
  - Problems 626

### 13. *Thermodynamics of a Simple Compressible Substance* 635

- 13.1 Important Mathematical Relations 635
- 13.2 Maxwell Relations 636
- 13.3 Some Quantities Derivable from  $p$ - $v$ - $T$  Data 637
- 13.4 Some Thermodynamic Relations Involving Specific Heats 640
- 13.5 Effect of Pressure and Volume Changes on Specific Heats 645
- 13.6 Some Thermodynamic Relations for Changes in Entropy, Internal Energy, and Enthalpy 648
- 13.7 Joule-Thomson Coefficient 650
- 13.8 Clapeyron Equation 653
- 13.9 Behavior of a van der Waals Gas 657
- 13.10 Real Gases and the Compressibility Factor 660
- 13.11 Generalized Enthalpy Chart for Real Gases 663
- 13.12 Generalized Entropy Chart for Real Gases 666
- 13.13 Fugacity and the Fugacity Function 668
- 13.14 Virial Equation of State 672
  - Problems 673

## **14. *Nonreactive Mixtures: Gas–Gas and Gas–Vapor* 683**

- 14.1** Mole Fraction, Mass Fraction, and Molecular Weight of a Mixture **683**
- 14.2** Dalton's Rule of Partial Pressure **685**
- 14.3** Amagat-Luduc Rule of Partial Volume **687**
- 14.4** Internal Energy, Enthalpy, and Specific Heats of an Ideal-Gas Mixture **690**
- 14.5** Entropy of an Ideal-Gas Mixture **694**
- 14.6** Mixtures of Ideal Gases and a Condensable Vapor **699**
- 14.7** Determination of Vapor Pressure of Water and Dew-Point Temperature **704**
- 14.8** Enthalpy and Entropy of an Air-Water-Vapor Mixture **706**
- 14.9** Adiabatic Saturation Process **708**
- 14.10** Psychrometric Chart **714**
- 14.11** Processes Involving Air-Water-Vapor Mixtures **715**
- 14.12** Real-Gas Mixtures **730**
  - Problems **732**

## **15. *Chemical Reactions and Reactive Mixtures* 743**

- 15.1** Stoichiometry and the Chemical Equation **744**
- 15.2** Basic Combustion Equations for Fossil Fuels **744**
- 15.3** Theoretical Air, Excess Air, and Air–Fuel Ratio **745**
- 15.4** Analysis of the Products of Combustion **748**
- 15.5** Energy Balance for Steady-State Steady-Flow Systems with Chemical Reactions **750**
- 15.6** Enthalpy of Reaction and Heating Values of Fuels **751**
- 15.7** Enthalpy of Formation **756**
- 15.8** Applications of the First Law to Steady-State Steady-Flow Systems with Chemical Reactions **759**

- 15.9 Absolute Entropy and the Third Law of Thermodynamics 768
  - 15.10 Applications of the Second Law to Steady-State Steady-Flow Systems with Chemical Reactions 769
  - 15.11 Standard Gibbs Function of Formation 776
  - 15.12 Chemical Equilibrium 779
  - 15.13 Equilibrium Constant of a Reactive Mixture of Ideal Gases 782
  - 15.14 Temperature Dependence of the Equilibrium Constant 795
  - 15.15 Concluding Remarks on Reactive Systems 801  
Problems 802
- 16. *System Design Involving Heat Reservoirs, Work Reservoirs, and Matter Reservoirs* 811**
- Gas-Liquefaction Systems**
- 16.1 Work Requirement for an Ideal Liquefaction System 811
  - 16.2 Reversible Gas-Liquefaction System 814
  - 16.3 Simple Linde-Hampson Gas-Liquefaction System 815
- Gas-Separation Systems**
- 16.4 Work Requirement for an Ideal Gas-Separation System 819
  - 16.5 Reversible Gas-Separation System 823
  - 16.6 Phase Diagram of a Two-Component Fluid 825
  - 16.7 Simple Linde Single-Column Air-Separation System 826
- Water-Desalination Systems**
- 16.8 Minimum Energy Requirement for Desalination 829
  - 16.9 Reverse-Osmosis Process 831
  - 16.10 Multieffect Distillation System 835
  - 16.11 Vapor-Compression Distillation 837

**16.12 Chemical Exergy of Hydrocarbon Fuels 839**Problems **846****BIBLIOGRAPHY 855****APPENDIX 859**
