0.8	Low-Reflection
0.9	5.1.1 Intrinsics
0.9	5.2.1 Low R
0.9	5.3.1 Buried
0.9	5.4.1 Tilted
0.9	5.5.1 Amplification
0.9	5.6.1 Dielectric Waveguides

Preface

v

1.0	1. Introduction	1
1.1	1.1 Historical Developments	1
1.1	1.2 Semiconductor Materials	2
1.1	1.3 Operating Principles	6
1.1	1.4 Applications	9
1.1	1.5 Book Overview	10
1.1	1.6 Future Challenges	12
1.1	References	13
2.0	2. Basic Concepts	15
2.1	2.1 Introduction	15
2.1	2.2 Optical Gain	16
2.1	2.2.1 Gain spectrum and bandwidth	16
2.1	2.2.2 Gain saturation	18
2.1	2.3 Dielectric Waveguide	19
2.1	2.4 Condition for Amplification	22
2.1	2.5 P-N Junction	24
2.1	2.6 Amplifier Characteristics	27
2.1	2.7 Multiquantum Well Amplifiers	30
2.1	References	35
3.0	3. Recombination Mechanisms and Gain	37
3.1	3.1 Introduction	37
3.1	3.2 Radiative Recombination	38

3.2.1 Condition for gain	39	5. Low Reflectivity Facet Designs	117
3.2.2 Gain calculation	40	5.1 Introduction	117
3.2.3 Spontaneous emission rate	42	5.2 Low Reflectivity Coatings	120
3.3 Non-radiative Recombination	46	5.3 Buried Facet Amplifiers	121
3.3.1 Auger effect	47	5.4 Tilted Facet Amplifiers	126
3.3.2 Surface recombination	56	5.5 Amplified Spontaneous Emission and Optical Gain	128
3.3.3 Recombination at defects	56	References	133
3.3.4 Carrier leakage over the heterobarrier	57		
3.4 Quantum Well Amplifiers	61	6. Amplifier Rate Equations and Operating Characteristics	135
3.4.1 Energy levels	62	6.1 Introduction	135
3.4.2 Optical gain and Auger recombination	65	6.2 Amplifier Rate Equations for Pulse Propagation	136
3.4.3 Strained quantum well amplifiers	74	6.3 Pulse Amplification	139
3.5 Gain in Quantum Wire (QWR) and Quantum Dot (QD) Structures	74	6.4 Multichannel Amplification	144
References	81	6.5 Amplifier Application in Optical Transmission Systems	146
4. Epitaxial Growth and Amplifier Designs	85	6.5.1 In-line amplifiers	148
4.1 Introduction	85	6.5.2 Optical pre-amplifier	152
4.2 Material Systems	86	6.5.3 Power amplifier	154
4.3 Epitaxial Growth Methods	88	6.6 Amplifier Noise	155
4.3.1 Liquid phase epitaxy	88	6.6.1 Noise analysis for optical transmission	157
4.3.2 Vapor phase epitaxy	90	6.7 Gain Dynamics	164
4.3.3 Metal organic chemical vapor deposition	91	6.7.1 Model of gain recovery	169
4.3.4 Molecular beam epitaxy	92	6.8 SOA with Carrier Reservoir	175
4.3.5 Chemical beam epitaxy	94	References	182
4.4 Strained Layer Epitaxy	95		
4.5 Selective Area Growth	96	7. Photonic Integrated Circuit Using Amplifiers	187
4.5.1 Model of SAG	99	7.1 Introduction	187
4.5.2 Materials growth using SAG	99	7.2 Integrated Laser and Amplifier	188
4.6 Amplifier Designs	100	7.3 Multichannel WDM Sources with Amplifiers	191
4.6.1 Leakage current	105	7.4 Spot Size Conversion (SSC)	192
4.7 Growth of QWR and QD Materials	107		
References	111		

7.5	Mach-Zehnder Interferometer	193	9.2.4	XOR using UNI gate	263
7.6	Photoreceiver	196	9.2.5	XOR optical gate based on cross-polarization modulation in SOA	264
	References	197	9.2.6	XOR using FWM in semiconductor optical amplifier with return-to-zero phase-shift-keying (RZ-DPSK) modulated input	265
8.	Functional Properties and Applications	199	9.3	Optical Logic OR	266
8.1	Introduction	199	9.3.1	OR gate using gain saturation in an SOA	266
8.2	Four-Wave Mixing	199	9.3.2	OR gate using a SOA and delayed interferometer (DI)	268
8.2.1	CW FWM results	200	9.3.2.1	Experiment	271
8.2.1.1	FWM analysis	202	9.3.2.2	Simulation	271
8.2.2	Pulsed FWM results	206	9.4	Optical Logic AND	276
8.2.3	FWM bandwidth	211	9.4.1	Optical logic AND gate using a SOA based Mach-Zehnder interferometer	276
8.3	Cross Gain Modulation	215	9.4.1.1	Experiment	277
8.3.1	Rate equations for multiple pulse propagation	216	9.4.1.2	Simulation	278
8.3.2	Bandwidth of cross gain modulation	217	9.5	Optical Logic INVERT	280
8.4	Cross Phase Modulation	221	9.6	Effect of Amplifier Noise	284
8.4.1	Mach-Zehnder interferometer	221	9.6.1	XOR operation	286
8.5	Wavelength Conversion	223	9.6.2	AND operation	288
8.6	Optical Demultiplexing	228	9.6.3	OR operation	289
8.6.1	FWM based scheme	228	9.6.4	NAND operation	289
8.6.2	Cross phase modulation based scheme	229	9.7	Optical Logic Using PSK Signals	290
8.7	OTDM System Applications	232	References	293	
8.7.1	Clock recovery	232			
8.7.2	OTDM transmission	234			
8.7.3	Gain-transparent SOA-Switch	235			
	References	238			
9.	Optical Logic Operations	243			
9.1	Introduction	243	10.	Optical Logic Circuits	297
9.2	Optical Logic XOR	244	10.1	Introduction	297
9.2.1	XOR using SOA-MZI	245	10.2	Adder	297
9.2.1.1	Simulation	251	10.3	Parity Checker	301
9.2.2	XOR using semiconductor optical amplifier-assisted fiber Sagnac gate	258	10.4	All-optical Pseudo-Random Binary Sequence (PRBS) Generator	310
9.2.3	XOR using terahertz optical asymmetric demultiplexer (TOAD)	260	10.5	All-Optical Header Processor	313

10.5.1 Multi-output based on two pulse correlation principle	314	13. Two-Photon Absorption in Amplifiers	387
10.5.2 All-optical packet header processor based on cascaded SOA-MZIs	316	13.1 Introduction	387
10.5.3 Ultrafast asynchronous multi-output all-optical header processor	316	13.2 Two-Photon Absorption in Semiconductors	387
References	320	13.3 Phase Dynamics and Other TPA Studies	392
11. Quantum Dot Amplifiers	323	13.3.1 Optical sampling	395
11.1 Introduction	323	13.3.2 Clock recovery	395
11.2 Quantum Dot Materials Growth	324	13.3.3 Two-photon gain (TPG)	397
11.3 Quantum Dot Amplifier Performance	327	13.3.4 TPA in QD-SOA	399
11.4 Gain Dynamics	329	13.4 Optical Logic Performance	399
11.4.1 Gain dynamics — one state model	330	13.4.1 Boolean logic (XOR, AND, NAND) operations	402
11.4.2 Gain dynamics — two state model	334	13.4.2 PRBS generation	406
11.4.3 Gain recovery results	338	References	408
11.5 Functional Performance	340	14. Semiconductor Optical Amplifiers as Broadband Sources	411
11.5.1 Amplification	341	14.1 Introduction	411
11.5.2 Cross gain modulation and wavelength conversion	344	14.2 High Power Broadband SOA Type Source	411
11.5.3 Four-wave mixing	348	14.3 Wavelength Division Multiplexing (WDM) Applications	417
11.6 Optical Logic Performance	353	14.4 Optical Coherence Tomography Source	420
11.6.1 XOR, OR, AND optical logic operations	357	14.5 Sensor Applications	422
11.6.2 PRBS generator	362	References	425
References	365	Index	427
12. Reflective Semiconductor Optical Amplifiers (RSOA)	369		
12.1 Introduction	369		
12.2 RSOA Performance	370		
12.3 Pulse Propagation Model and Gain Dynamics	373		
12.4 RSOA Based Transmitter — Concept	376		
12.5 Optical Transmission Applications	381		
References	384
