

Contents

CHAPTER 1 Basic Semiconductor Properties 1

- 1.1 General Material Properties 1
- 1.2 Crystal Structure 5
 - 1.2.1 The Unit Cell Concept 5
 - 1.2.2 Simple 3-D Unit Cells 7
 - 1.2.3 Bravais Lattices and Crystal Systems 8
 - 1.2.4 Specific Semiconductor Lattices 11
 - 1.2.5 Miller Indices 13
 - 1.2.6 Example Use of Miller Indices 16
 - Wafer Surface Orientation 16
 - Wafer Flats and Notches 17
 - Pattern Alignment 18
- References 19
- Source Listing 19
- Problems 19

CHAPTER 2 Elements of Quantum Mechanics 23

- 2.1 The Quantum Concept 23
 - 2.1.1 Blackbody Radiation 23
 - 2.1.2 The Bohr Atom 25
 - 2.1.3 Wave-Particle Duality 28
- 2.2 Basic Formalism 29
 - 2.2.1 General Formulation 29
 - 2.2.2 Time-Independent Formulation 31
- 2.3 Simple Problem Solutions 32
 - 2.3.1 The Free Particle 33
 - 2.3.2 Particle in a 1-D Box 35
 - 2.3.3 Finite Potential Well 40
- References 46
- Source Listing 46
- Problems 46

CHAPTER 3 Energy Band Theory 51

- 3.1 Preliminary Considerations 52
 - 3.1.1 Simplifying Assumptions 52
 - 3.1.2 The Bloch Theorem 52
 - 3.2 Approximate One-Dimensional Analysis 55
 - 3.2.1 Kronig–Penney Model 55
 - 3.2.2 Mathematical Solution 55
 - 3.2.3 Energy Bands and Brillouin Zones 58
 - 3.2.4 Particle Motion and Effective Mass 62
 - 3.2.5 Carriers and Current 67
 - 3.3 Extrapolation of Concepts to Three Dimensions 70
 - 3.3.1 Brillouin Zones 70
 - 3.3.2 E - k Diagrams 71
 - 3.3.3 Constant-Energy Surfaces 74
 - 3.3.4 Effective Mass 77
 - General Considerations 77
 - Ge, Si, and GaAs 78
 - Measurement 80
 - 3.3.5 Band Gap Energy 81
- References 83
Problems 83

CHAPTER 4 Equilibrium Carrier Statistics 87

- 4.1 Density of States 88
 - 4.1.1 General Derivation 89
 - 4.1.2 Specific Materials 93
 - Conduction Band—GaAs 94
 - Conduction Band—Si, Ge 94
 - Valence Band—Ge, Si, GaAs 95
- 4.2 Fermi Function 96
 - Introduction 96
 - Problem Specification 97
 - Derivation Proper 98
 - Concluding Discussion 100
- 4.3 Supplemental Information 101
 - 4.3.1 Equilibrium Distribution of Carriers 101
 - 4.3.2 The Energy Band Diagram 102
 - 4.3.3 Donors, Acceptors, Band Gap Centers 107
- 4.4 Equilibrium Concentration Relationships 110
 - 4.4.1 Formulas for n and p 112
 - 4.4.2 n_i and the np Product 116
 - 4.4.3 Charge Neutrality Relationship 116
 - 4.4.4 Relationships for N_D^+ and N_A^- 118

- 4.5 Concentration and E_F Calculations 120
 - 4.5.1 General Information 120
 - 4.5.2 Equilibrium Carrier Concentrations 122
 - Freeze-Out/Extrinsic T 122
 - Extrinsic/Intrinsic T 123
 - 4.5.3 Determination of E_F 125
 - Exact Position of E_i 125
 - Freeze-Out/Extrinsic T 126
 - Extrinsic/Intrinsic T 126
 - 4.5.4 Degenerate Semiconductor Considerations 127
- References 128
Problems 128

CHAPTER 5 Recombination–Generation Processes 134

- 5.1 Introduction 134
 - 5.1.1 Survey of R–G Processes 134
 - Recombination Processes 135
 - Generation Processes 137
 - 5.1.2 Momentum Considerations 137
 - 5.2 Recombination–Generation Statistics 140
 - 5.2.1 Definition of Terms 140
 - 5.2.2 Generalized Rate Relationships 141
 - 5.2.3 The Equilibrium Simplification 144
 - 5.2.4 Steady-State Relationship 147
 - 5.2.5 Specialized Steady-State Relationships 149
 - Low Level Injection 149
 - R–G Depletion Region 151
 - 5.2.6 Physical View of Carrier Capture 152
 - 5.3 Surface Recombination–Generation 154
 - 5.3.1 Introductory Comments 154
 - 5.3.2 General Rate Relationships (Single Level) 155
 - 5.3.3 Steady-State Relationships 157
 - Single Level 157
 - Multi-Level 158
 - 5.3.4 Specialized Steady-State Relationships 159
 - Low Level Injection/Flat Band 159
 - Depleted Surface 161
 - 5.4 Supplemental R–G Information 162
 - Multistep Nature of Carrier Capture 162
 - Manipulation of N_T 162
 - Selected Bulk Parametric Data 163
 - Doping Dependence 164
 - Selected Surface Parametric Data (Si/SiO₂) 165
- References 169

Source Listing **170**
Problems **170**

CHAPTER 6 Carrier Transport 175

6.1 Drift **175**
6.1.1 Definition-Visualization **175**
6.1.2 Drift Current **176**
6.1.3 Mobility **178**
 Basic Information **178**
 Theoretical Considerations **179**
 Doping/Temperature Dependence **182**
6.1.4 High-Field/Narrow-Dimension Effects **183**
 Velocity Saturation **183**
 Intervalley Carrier Transfer **188**
 Ballistic Transport/Velocity Overshoot **189**
6.1.5 Related Topics **190**
 Resistivity **190**
 Hall Effect **192**
6.2 Diffusion **196**
6.2.1 Definition-Visualization **196**
6.2.2 Diffusion Current **197**
6.2.3 Einstein Relationship **200**
6.3 Equations of State **202**
6.3.1 Current Equations **202**
 Carrier Currents **202**
 Dielectric Displacement Current **203**
 Quasi-Fermi Levels **203**
6.3.2 Continuity Equations **205**
6.3.3 Minority Carrier Diffusion Equations **206**
6.3.4 Equations Summary **208**
References **209**
Problems **210**
