Preface v

1 Introduction to Biomaterials Science and Biocompatibility 1

Scope of Text 1

Structures of Soft and Hard Tissues 3

Properties of Tissues 16

Structure of Synthetic Materials 19

Properties of Synthetic Materials 21

Structures and Properties of Cells 22

Cellular and Tissue Responses to Materials 24

Summary 25

2	Introduction to Structure and Properties of Biological Tissues	27
	Introduction to Principles of Stereochemistry	27
	Basic Building Blocks	30
	Stereochemistry of Polymer Chains	33
	Primary and Secondary Structures of Biological Macromolecules	53
	Higher-Order Structures	61
	Structure of Extracellular Matrix Macromolecules	62
	Cell Membrane Polymers	71
	Other Polymeric Materials	78
	Summary	83
3	Introduction to Structure and Properties of Polymers, Metals, and Ceramics	87
	Introduction to Synthetic Materials	87
	Polymer Structures	89
	Polymer Mechanical Properties	95
	Structure of Metals	106
	Structure of Ceramics	114
	Structure of Composites	117
	Materials Degradation	119
	Summary	120
4	Microscopic and Macroscopic Structure of Tissue	121
	Introduction to Methods for Cellular and Tissue Analysis	121
	Surface and Internal Linings	125
	Conduit and Holding Structures	133
	Parenchymal or Organ-Supporting Structures	139
	Skeletal Structures	139
	Summary	144
5	Determination of Physical Structure and Modeling	147
	Introduction	147
	Viscosity	148
	Light Scattering	152
	Quasi-Elastic Light Scattering	154
	Ultracentrifugation	157
	Electron Microscopy	160
	Determination of Physical Parameters for Biological Macromolecules	161
	Summary	162

- 6** Assembly of Biological Macromolecules 165
- Introduction 165
 - Methods for Studying Self-Assembly Processes 169
 - Collagen Self-Assembly 174
 - Assembly of Cytoskeletal Components 176
 - Actin–Myosin Interaction 179
 - Fibrinogen 182
 - Summary 182
- 7** Mechanical Properties of Tissues 187
- Introduction to Analysis of Tissue Mechanical Properties 187
 - Mechanical Properties of Collagenous Tissues 196
 - Mechanical Properties of Hard Tissue 207
 - Cellular Biomechanics 208
 - Summary 209
- 8** Pathobiology and Response to Tissue Injury 213
- Introduction 213
 - Cellular Components 214
 - Cell Attachment, Proliferation, and Differentiation 223
 - Cellular Adaptation 228
 - Cell Injury 234
 - Summary 238
- 9** Wound Healing 241
- Introduction 241
 - Biological Cascades Involved in Healing 242
 - Cells Involved in Wound Healing 250
 - Inflammatory and Immunological Aspects of Wound Healing 252
 - Cell Adhesion Molecules Involved in Wound Healing 261
 - Growth Factors Involved in Wound Healing 263
 - General Wound-Healing Process: Inflammatory Phase 264
 - Capsule Formation Around Implants 269
 - Cartilage Wound Healing 269
 - Tendon and Ligament Healing 272
 - Peripheral Nerve Repair 272
 - Hard Tissue Repair 273
 - Cardiovascular Wound Healing 274
 - Summary 275

10	Pathobiological Responses to Implants	279
	Introduction	279
	Pathobiological Complications with Silicone Implants	280
	Inflammation Induced by Wear Particles	286
	Complement Activation by Biomaterial Surfaces	289
	Restenosis After Vascular Stenting	292
	Thrombosis and Small-Diameter Vascular Grafts	296
	Ectopic Mineralization of Implants	298
	Summary	300
11	Tissue Engineering	305
	Introduction to Tissue Engineering	305
	Immunology of Cell and Tissue Transplantation	307
	Role of Matrixes and Scaffolds in Cell Transplantation	310
	Tissue Engineering of External Lining Structures	312
	Skeletal Tissue Engineering	316
	Tissue Engineering of Specialized Organs	320
	Summary	321
12	Future Considerations	327
	Introduction	327
	New Directions in Tissue Engineering	328
	Design of New Polymeric Materials	328
	Design of Interfaces	328
	Vascular Device Design	329
	Summary	329
	Index	331
