INTRODUCTION . . . . .	xi
------------------------	----

## I. THERMAL PROPERTIES OF THE CRYSTAL LATTICE

§ 1. THE SPECIFIC HEAT AT LOW TEMPERATURES . . . . .	1
1. Theories of Einstein and Debye. 2. Extensions of the theory.	
§ 2. SPECIFIC HEATS AT HIGH TEMPERATURES . . . . .	11
§ 3. NUMERICAL VALUES OF THE CHARACTERISTIC TEMPERATURE . . . . .	12
§ 4. THE EQUATION OF STATE . . . . .	15
1. Thermal expansion. 2. Variation of compressibility with temperature.	
3. Relation between thermal expansion and change of compressibility with pressure.	
§ 5. BINDING ENERGY OF METALLIC ELEMENTS . . . . .	23
§ 6. ALLOYS: THE PHASE DIAGRAM . . . . .	24
§ 7. ALLOYS: THERMAL EQUILIBRIUM OF THE SUPERSTRUCTURE . . . . .	28
1. Long-distance order. 2. Order of neighbours. 3. Method of Bragg and Williams. 4. Method of Bethe. 5. Contribution to the specific heat arising from disorder. 6. Rate of approach to the equilibrium state.	

## II. ELECTRONS IN EQUILIBRIUM IN THE CRYSTAL LATTICE

§ 1. WAVE-MECHANICAL PRINCIPLES . . . . .	41
1. The hydrogen and alkali atoms. 2. The helium atom and the self-consistent field. 3. Fock's equation. 4. Method of Thomas and Fermi.	
§ 2. THE ELECTROSTATIC FIELD IN A METAL . . . . .	49
§ 3. THE FREE-ELECTRON GAS . . . . .	51
1. The model of Sommerfeld. 2. A one-dimensional metal. 3. A three-dimensional metal. 4. Introduction of running waves.	
§ 4. MOTION OF ELECTRONS IN A PERIODIC FIELD . . . . .	56
1. The theorem of Bloch. 2. Approximation of nearly free electrons. 3. Brillouin zones. 4. Approximation of tight binding. 5. Exact wave functions; method of Wigner and Seitz. 6. Density of states.	
§ 5. CRYSTALLINE FIELD IN ALLOYS . . . . .	86

## III. MOTION OF ELECTRONS IN AN APPLIED FIELD

§ 1. CONDUCTORS, INSULATORS, AND SEMI-CONDUCTORS . . . . .	89
§ 2. VELOCITY OF AN ELECTRON IN A GIVEN STATE IN A LATTICE . . . . .	92
§ 3. ACCELERATION OF THE ELECTRONS BY AN EXTERNAL ELECTRIC FIELD . . . . .	93

viii	CONTENTS	
§ 4.	THE EFFECTIVE NUMBER OF FREE ELECTRONS . . . . .	96
§ 5.	PERIODIC ELECTRIC FIELDS; LIGHT WAVES . . . . .	99
§ 6.	DISPERSION . . . . .	103
§ 7.	OPTICAL PROPERTIES OF METALS; THEORY . . . . .	105
	1. Definition of optical constants. 2. Method of calculation. 3. Long wave-lengths; Hagen-Rubens relation. 4. Short wave-lengths; formula of Zener. 5. Intermediate wave-lengths. 6. Corrections due to the periodic field of the lattice.	
§ 8.	COMPARISON WITH EXPERIMENT . . . . .	116
	1. Experimental methods. 2. Internal photoelectric absorption. 3. Absorption for long wave-lengths: (a) Far infra-red; the Hagen-Rubens relation. (b) Near infra-red and visible. 4. Dispersion. 5. Liquid metals. 6. Alloys.	
§ 9.	X-RAY EMISSION AND ABSORPTION . . . . .	125
	1. Emission. 2. Absorption.	

#### IV. COHESION

§ 1.	TYPES OF COHESION . . . . .	132
	1. van der Waals binding. 2. Homopolar binding.	
§ 2.	METALLIC COHESION; METHOD OF WIGNER AND SELTZ . . . . .	134
	1. Calculation without exchange. 2. Correlation between the positions of electrons. 3. Interaction between closed shells of atomic cores.	
§ 3.	RESULTS . . . . .	143
	1. Alkali metals. 2. Noble metals. 3. Transition metals. 4. Divalent metals.	
§ 4.	ELASTIC CONSTANTS . . . . .	147
	1. Cauchy relations.	
§ 5.	WORK FUNCTION . . . . .	150
§ 6.	ALLOYS . . . . .	151

#### V. THE CRYSTAL STRUCTURE OF METALS AND ALLOYS

§ 1.	INTRODUCTION . . . . .	152
§ 2.	BRILLOUIN ZONES FOR VARIOUS CRYSTAL STRUCTURES . . . . .	152
	1. Structures referable to cubic axes. 2. Structures based on a hexagonal lattice. 3. Structures based on an orthorhombic lattice. 4. Structures based on a rhombohedral lattice. 5. Some typical alloy phases. 6. The $\gamma$ -structure. 7. The fluorspar structure.	
§ 3.	FACTORS DETERMINING THE CRYSTAL STRUCTURE . . . . .	170
	1. The Hume-Rothery rule. 2. The size of ions.	

	CONTENTS	ix
VI.	HEAT CAPACITY AND MAGNETIC PROPERTIES OF THE METALLIC ELECTRONS	

§ 1.	THE FERMI DISTRIBUTION LAW . . . . .	175
	1. Calculation of the thermodynamic potential.	
§ 2.	SPECIFIC HEAT . . . . .	178
	1. Numerical values. 2. Comparison with experiment.	
§ 3.	MAGNETISM; INTRODUCTION . . . . .	183
§ 4.	WEAK SPIN PARAMAGNETISM . . . . .	184
	1. Numerical values. 2. Comparison with experiment.	
§ 5.	THE TRANSITION METALS . . . . .	189
	1. General discussion. 2. Specific heat. 3. Paramagnetism. 4. Alloys of transition metals: (a) Alloys of nickel; (b) Specific heat of copper-nickel alloys; (c) Alloys of palladium and platinum; (d) Palladium and hydrogen.	
§ 6.	DIAMAGNETISM OF CONDUCTION ELECTRONS . . . . .	201
	1. Diamagnetism of free electrons. 2. Effect of the lattice field. 3. Comparison with experiment. 4. Diamagnetism at low temperatures and high fields. 5. Effect of cold work.	
§ 7.	FERROMAGNETISM . . . . .	219
	1. Nature of the elementary magnets. 2. The Weiss molecular field. 3. Review of the experimental material and comparison with the Weiss theory. 4. Internal energy of a ferromagnetic body: (a) Magneto-caloric effect; (b) Specific heat. 5. Application of quantum mechanics; the theories of Heisenberg and Bloch. 6. Dependence of saturation moment on temperature; the $T^{\frac{3}{2}}$ law.	

#### VII. THE ELECTRICAL RESISTANCE OF METALS AND ALLOYS

§ 1.	FORMER THEORIES . . . . .	240
§ 2.	DEPENDENCE OF RESISTANCE ON TEMPERATURE; QUALITATIVE DISCUSSION . . . . .	243
§ 3.	DEPENDENCE OF THE RESISTANCE ON THE POSITION OF THE METAL IN THE PERIODIC TABLE . . . . .	245
§ 4.	DETAILED THEORY OF CONDUCTIVITY; GENERAL OUTLINE . . . . .	247
§ 5.	CALCULATION OF THE PROBABILITY OF SCATTERING . . . . .	249
	1. Calculation of matrix elements for temperature resistance. 2. Validity of the perturbation method. 3. Calculation taking into account the motion of the atoms. 4. Calculation using the Debye model; scattering probability for low temperatures.	
§ 6.	CALCULATION OF THE CURRENT . . . . .	258
	1. Explicit formulae for temperature resistance. 2. Comparison with experiment. 3. Divalent and transition metals.	

## CONTENTS

§ 7. RESISTANCE AT HIGH TEMPERATURES . . . . .	268
§ 8. CHANGE OF RESISTANCE UNDER PRESSURE . . . . .	271
§ 9. RESISTANCE AT LOW TEMPERATURES . . . . .	273
§ 10. RESISTANCE OF LIQUID METALS . . . . .	277
§ 11. EFFECT OF A MAGNETIC FIELD . . . . .	280
§ 12. RESISTANCE OF ALLOYS; DILUTE SOLUTIONS . . . . .	286
1. Matthiessen's rule. 2. Theoretical calculation of the increase in resistance of a noble metal due to foreign atoms in solid solution. 3. Dependence of the resistance on the properties of the solvent and dissolved metals (dilute solutions).	
§ 13. RESISTANCE OF ALLOYS; CONCENTRATION OF BOTH COMPONENTS COMPARABLE . . . . .	296
1. Resistance of a totally disordered alloy. 2. Temperature coefficient of resistance of alloys.	
§ 14. RESISTANCE OF BISMUTH AND ITS ALLOYS . . . . .	302
§ 15. THERMAL CONDUCTIVITY AND THERMOELECTRICITY . . . . .	305
1. Thermal conductivity. 2. Thermoelectricity.	
APPENDIX I. THE EFFECTIVE NUMBER OF FREE ELECTRONS IN CERTAIN METALS . . . . .	315
APPENDIX II. SOME CONSTANTS OF METALS. PHYSICAL CONSTANTS AND CONVERSION FACTORS . . . . .	318
SOME BOOKS AND ARTICLES DEALING WITH THE PROPERTIES OF METALS AND ALLOYS . . . . .	320
INDEX OF NAMES . . . . .	321
INDEX OF SUBJECTS . . . . .	324
