Preface v

- 1 An introduction to the solid state 1**
 - 1.1 *The ionic bond 2*
 - Observations of the ionic bond 4*
 - The structure of an ionic solid 4*
 - 1.2 *The covalent-bonded crystal 7*
 - 1.3 *The metallic-bonded crystal 9*
 - 1.4 *Imperfections in the crystalline state 10*
 - The crystal surface 10*
 - Vacancies 11*
 - Stoichiometric deviations 12*
 - Foreign impurities 13*
 - Dislocations 13*
 - 1.5 *The amorphous state 14*
- 2 The symmetry properties of crystal lattices 17**
 - 2.1 *Elementary group theory 18*
 - The concept of the group 18*
 - Examples of a group 19*
 - Further properties of groups 22*
 - 2.2 *The crystalline structure 24*
 - The transformations of the crystal lattice 24*
 - The Bravais lattice 27*
 - 2.3 *Point groups 33*
 - Classes of point groups 33*
 - Point-group transformations 34*
 - Construction of the point groups 36*
- 3 The ionic crystal 45**
 - 3.1 *General properties of ionic crystals 45*
 - Stability of ionic crystals 47*
 - Ionic radii in crystals 50*
 - 3.2 *The electrostatic potential 52*
 - The classical Coulomb potential 52*
 - The repulsive overlap potential 55*
 - 3.3 *Thermodynamics and the cohesive energy of the crystal lattice 56*
 - 3.4 *Electronic properties of ionic crystals 61*
 - Electronic energy levels of ionic crystals 61*

4	Crystal field theory	75
4.1	<i>The crystalline potential</i>	76
4.2	<i>Energy-level splitting in a crystal field</i>	82
	<i>The representations of groups</i>	86
	<i>Applications to the spectra of crystalline atoms</i>	93
	<i>Orientation of half-integral angular momenta in a crystal; double-valued representations</i>	102
4.3	<i>Selection rules for absorption (or emission) of radiation</i>	107
	<i>Polarized electric dipole radiation absorption</i>	109
	<i>Polarized magnetic dipole radiation absorption</i>	110
4.4	<i>Conclusions</i>	111
5	The magnetic properties of crystals	113
5.1	<i>Paramagnetism in the solid state</i>	114
	<i>Magnetic energy levels of a paramagnetic salt</i>	115
	<i>Paramagnetic susceptibility</i>	118
	<i>The entropy of a paramagnetic crystal</i>	122
	<i>Cooling by adiabatic demagnetization</i>	125
5.2	<i>Ferromagnetism</i>	127
	<i>The Weiss theory of ferromagnetism</i>	130
	<i>The Heisenberg theory of ferromagnetism</i>	131
5.3	<i>Antiferromagnetism</i>	140
5.4	<i>Ferrimagnetism</i>	142
6	Free-electron theory of metals	143
6.1	<i>Classical free-electron model</i>	143
	<i>The Wiedemann-Franz law</i>	143
	<i>Electrical conductivity</i>	144
	<i>Thermal conductivity</i>	146
6.2	<i>Quantum-mechanical free-electron model</i>	149
	<i>Qualitative discussion</i>	149
	<i>Quantitative discussion</i>	152
	<i>Free electrons in a box</i>	152
6.3	<i>Application of Fermi-Dirac statistics</i>	157
	<i>The density of states of an electron gas</i>	159
	<i>Free-electron concentration</i>	161
	<i>Number of electrons per energy interval at $T = 0^\circ\text{K}$</i>	162
	<i>Mean kinetic energy of the Fermi gas at $T = 0^\circ\text{K}$</i>	163
	<i>The properties of a degenerate Fermi gas at $T > 0^\circ\text{K}$</i>	163
	<i>Electron concentration</i>	167
	<i>The specific heat of an electron gas</i>	167
	<i>The spin paramagnetism of an electron gas</i>	169
	<i>The De Haas-Van Alphen effect</i>	171
6.4	<i>The wave-packet description of electron motion in a metal</i>	173

- 7. Quasi-free-electron theory: electrons in a periodic lattice 178**
- 7.1 *Free-electron scattering by a single atom* 179
 - Dirac-delta-function potential* 180
 - The arbitrary-scattering-potential solution in terms of the S matrix* 183
 - 7.2 *Free-electron scattering in a one-dimensional crystal* 188
 - Bloch-Floquet theorem* 189
 - Electronic energy bands in a one-dimensional crystal* 192
 - Exact calculation for the Dirac-delta-function-model crystal* 193
 - Electron motion near energy-band edges* 195
 - Bandwidth and electron freedom* 196
 - Number of energy levels in an energy band* 197
 - Hole and electron current* 198
 - Effective mass* 199
 - 7.3 *The imperfect crystal: effects of substitutional impurities* 202
 - 7.4 *Conclusions* 206
- 8. Quasi-free-electron theory: electrons in a three-dimensional periodic lattice 207**
- 8.1 *The reciprocal lattice* 208
 - The simple-cubic (sc) lattice* 210
 - The face-centered-cubic (fcc) lattice* 210
 - The body-centered-cubic (bcc) lattice* 212
 - The hexagonal-close-packed (hcp) lattice* 212
 - 8.2 *Planes of discontinuity in a three-dimensional lattice* 213
 - 8.3 *Brillouin zones* 216
 - The reduced zone* 217
 - The structure factor* 217
 - Symmetry points in the reduced zone* 220
 - 8.4 *Energy bands* 222
 - Effective-mass theory* 222
 - Nondegenerate energy bands* 224
 - Degenerate energy bands* 227
 - The tight-binding approximation* 230
 - The density of states* 238
- 9. Quasi-free-electron theory: applications 243**
- 9.1 *Semiconductor theory* 244
 - Classification of semiconductors* 244
 - The intrinsic semiconductor* 245
 - The impurity semiconductor* 249
 - The Hall effect* 255

9.2	Interaction of a semiconductor with time-dependent fields	258
	<i>Equations of motion</i>	259
	<i>Complex conductivity</i>	259
	<i>Complex dielectric constant</i>	261
	<i>Cyclotron resonance in semiconductors</i>	262
	<i>Cyclotron resonance in metals</i>	268
	<i>Optical transitions in semiconductors</i>	271
9.3	Contact physics	274
	<i>Theory of thermionic emission</i>	275
	<i>Schottky emission</i>	278
	<i>Two different metals in contact</i>	280
	<i>The contact rectifier</i>	282
	<i>Metal-n-type semiconductor junction</i>	283
	<i>Metal-p-type semiconductor junction</i>	284
	<i>The p-n junction</i>	285
	<i>The point-contact transistor</i>	287

10 The cohesive energy of conducting solids 290

10.1	The Wigner-Seitz theory	292
10.2	The Bohm-Pines theory	302
	<i>The collective description of a many-particle system</i>	302
	<i>Plasma degrees of freedom and collective coordinates</i>	308
	<i>The correlation energy of a degenerate electron gas</i>	314

Appendix A Kramers' theorem 319

Appendix B Statistical mechanics and the density matrix 324

Appendix C General properties of the S matrix 336

Name index 339

Subject index 343
