

CONTENTS

Preface	xi
1 Introductory Survey	1
1-1 The Basic Phenomena	2
1-2 The London Equations	4
1-3 The Pippard Nonlocal Electrodynamics	6
1-4 The Energy Gap and the BCS Theory	8
1-5 The Ginzburg-Landau Theory	9
1-6 Type II Superconductors	11
1-7 Phase, Josephson Tunneling, Fluxoid Quantization, and Persistent Currents: The Essence of Superconductivity	13
1-8 Fluctuation Effects	14
2 The BCS Theory	16
2-1 Cooper Pairs	17
2-2 Origin of the Attractive Interaction	19
2-3 The BCS Ground State	21

2-4	Variational Method	25	4	Ginzburg-Landau Theory	104
	Determination of the Coefficients	25	4-1	The Ginzburg-Landau Free Energy	105
	Evaluation of Ground-State Energy	29	4-2	The Ginzburg-Landau Differential Equations	110
2-5	Solution by Canonical Transformation	30		The Ginzburg-Landau Coherence Length	111
	Excitation Energies and the Energy Gap	33	4-3	Calculation of the Domain-Wall-Energy Parameter	114
2-6	Finite Temperatures	33	4-4	Critical Current of a Thin Wire or Film	116
	Determination of T_c	34	4-5	Fluxoid Quantization and the Little-Parks Experiment	120
	Temperature Dependence of the Gap	34		The Fluxoid	120
	Thermodynamic Quantities	35		The Little-Parks Experiment	122
2-7	State Functions and the Density of States	38	4-6	Parallel Critical Field of Thin Films	124
	Density of States	41		Thicker Films	125
2-8	Electron Tunneling	43	4-7	The Linearized GL Equation	127
	The Semiconductor Model	44	4-8	Nucleation in Bulk Samples: H_{c2}	128
	Normal-Normal Tunneling	46	4-9	Nucleation at Surfaces: H_{c3}	130
	Normal-Superconductor Tunneling	46	4-10	Nucleation in Films and Foils	133
	Superconductor-Superconductor Tunneling	48		Angular Dependence of the Critical Field of Thin Films	133
	Phonon Structure	49		Nucleation in Films of Intermediate Thickness	135
2-9	Transition Probabilities and Coherence Effects	50	4-11	The Abrikosov Vortex State at H_{c2}	138
	Ultrasonic Attenuation	53		5 Magnetic Properties of Type II Superconductors	143
	Nuclear Relaxation	55	5-1	Behavior Near H_{c1} : The Structure of an Isolated Vortex	144
	Electromagnetic Absorption	57		The High- κ Approximation	146
2-10	Electrodynamics	59		Vortex Line Energy	148
	Calculation of $K(0, T)$ or $\lambda_{\mathcal{G}}(T)$	62	5-2	Interaction Between Vortex Lines	149
	Calculation of $K(q, 0)$	64	5-3	Magnetization Curves	150
	Nonlocal Electrodynamics in Coordinate Space	66		Low Flux Density	151
	Effect of Impurities	67		Intermediate Flux Densities	152
	Complex Conductivity	68		Regime Near H_{c2}	155
2-11	Concluding Summary	71	5-4	Flux Pinning, Creep, and Flow	157
			5-5	Flux Flow	161
3	Magnetic Properties of Type I Superconductors	72		The Bardeen-Stephen Model	162
3-1	The Penetration Depth	73		Onset of Resistance in a Wire	166
	Gauge Choice for the Vector Potential	73		Experimental Verification of Flux Flow	169
	Preliminary Estimate of λ	74		Concluding Remarks on Flux Flow	170
	Exact Solution by Fourier Analysis	75	5-6	The Critical-State Model	171
	Temperature Dependence of λ	79	5-7	Thermally Activated Flux Creep	174
3-2	Penetration Depth in Thin Films	81		Anderson-Kim Flux-Creep Theory	175
	Diffuse Surface Scattering	83		Thermal Instability	181
	Specular Surface Scattering	86	5-8	Superconducting Magnets for Time-varying Fields	182
3-3	Measurement of λ	87		Flux Jumps	184
3-4	Superconductors in Strong Magnetic Fields: The Intermediate State	88		Twisted Composite Conductors	185
	Nonzero Demagnetizing Factor	90	6	Josephson Effect and Macroscopic Quantum Phenomena	192
	Intermediate State in a Flat Slab	91	6-1	The Josephson Current-Phase Relation	193
	Intermediate State of a Sphere	97	6-2	Effect of Magnetic Field	196
3-5	Critical Current of a Superconducting Wire	99			

6-3	Superconducting Quantum Interferometers	201
6-4	The AC Josephson Effect	203
	General Equations	205
	Examples	207
6-5	General Relations between Phase, Number, Energy, and Current	209
6-6	Practical SQUID Magnetometers	212
	Typical Parameter Values	212
	The Two-Junction DC SQUID	214
	Effect of Screening	215
	Use of Flux Transformer	217
	The Single-Contact RF SQUID	218
	Limit of Sensitivity	224
6-7	Other Josephson-Effect Devices	226
	The SLUG Voltmeter	227
	Josephson-Effect Radiation Detectors	228
7	Fluctuation Effects	230
7-1	Appearance of Resistance in a Thin Wire	231
7-2	Superconductivity above T_c in Zero-Dimensional Systems	237
7-3	Spatial Variation of Fluctuations	240
7-4	Fluctuation Diamagnetism above T_c	244
	Diamagnetism in Two-Dimensional Systems	249
7-5	Time Dependence of Fluctuations	250
7-6	Fluctuation-Enhanced Conductivity above T_c	251
	Three Dimensions	253
	Two Dimensions	253
	One Dimension	254
	Anomalous Contributions to Fluctuation Conductivity	255
	High-Frequency Conductivity	256
8	Concluding Topics	258
8-1	Bogoliubov Method: Generalized Self-Consistent Field	258
	Dirty Superconductors	260
	Uniform Current in Pure Superconductors	261
	Excitations in Vortex	262
8-2	Magnetic Perturbations and Gapless Superconductivity	263
	Depression of T_c by Magnetic Perturbations	264
	Density of States	268
8-3	Time-Dependent Ginzburg-Landau Theory	273
	Electron-Phonon Relaxation	275
	References	281
	Indexes	285
	Name Index	
	Subject Index
