Preface	vii
Contributors	ix
1. The Origins of Modern Color Science J.D. Mollon	1
1.1 Newton	2
1.2 The trichromacy of color mixture	4
1.3 Interference colors	14
1.4 The ultra-violet, the infra-red, and the spectral sensitivity of the eye	16
1.5 Color constancy, color contrast and color harmony	19
1.6 Color deficiency	22
1.7 The golden age (1850–1931)	26
1.8 Nerves and sensations	35
Further reading	36
References	36
2. Light, the Retinal Image, and Photoreceptors Orin Packer and David R. Williams	41
2.1 Introduction	42
2.2 The light stimulus	42
2.3 Sources of light loss in the eye	46
2.4 Sources of blur in the retinal image	52
2.5 Photoreceptor optics	61
2.6 Photoreceptor topography and sampling	71
2.7 Summary	85
2.8 Appendix A: Quantifying the light stimulus	87
2.9 Appendix B: Generalized pupil function and image formation	96
Acknowledgments	97
References	97
3. Color Matching and Color Discrimination Vivianne C. Smith and Joel Pokorny	103
3.1 Introduction	104
3.2 Color mixture	104
3.3 Chromatic detection	124
3.4 Chromatic discrimination	132
3.5 Congenital color defect	138
Acknowledgments	142
Notes	142
References	142
4. Color Appearance Steven K. Shevell	149
4.1 Introduction	150
4.2 Unrelated colors	152

4.3	Related colors	162
4.4	Color constancy	175
	Notes	187
	References	187
5.	Color Appearance and Color Difference Specification David H. Brainard	191
5.1	Introduction	192
5.2	Color order systems	192
5.3	Color difference systems	202
5.4	Current directions in color specification	206
	Acknowledgments	213
	Notes	213
	References	213
6.	The Physiology of Color Vision Peter Lennie	217
6.1	Introduction	218
6.2	Photoreceptors	227
6.3	Intermediate retinal neurons	230
6.4	Ganglion cells and LGN cells	231
6.5	Cortex	236
	Acknowledgments	242
	Notes	242
	References	242
7.	The Physics and Chemistry of Color: the 15 Mechanisms Kurt Nassau	247
7.1	Overview: 15 causes of color	248
7.2	Introduction to the physics and chemistry of color	248
7.3	Mechanism 1: Color from incandescence	250
7.4	Mechanism 2: Color from gas excitation	252
7.5	Mechanism 3: Color from vibrations and rotations	253
7.6	Mechanisms 4 and 5: Color from ligand field effects	254
7.7	Mechanism 6: Color from molecular orbitals	257
7.8	Mechanism 7: Color from charge transfer	259
7.9	Mechanism 8: Metallic colors from band theory	261
7.10	Mechanism 9: Color in semiconductors	262
7.11	Mechanism 10: Color from impurities in semiconductors	265
7.12	Mechanism 11: Color from color centers	266
7.13	Mechanism 12: Color from dispersion	269
7.14	Mechanism 13: Color from scattering	272
7.15	Mechanism 14: Color from interference without diffraction	274
7.16	Mechanism 15: Color from diffraction	276
	Further reading	279
	References	279
8.	Digital Color Reproduction Brian A. Wandell and Louis D. Silverstein	281
8.1	Introduction and overview	282
8.2	Imaging as a communications channel	282
8.3	Image capture	285
8.4	Electronic image displays	294
8.5	Printing	304
8.6	Key words	314
8.7	Conclusions	314
	Acknowledgments	314
	References	314
	Author index	317
	Subject index	325
