<b>1. Historical Introduction . . . . .</b>	<b>1</b>
1. Preamble . . . . .	1
2. The early years . . . . .	2
3. Penetration of field . . . . .	7
4. Towards coherence . . . . .	10
5. The energy gap . . . . .	13
6. Early theory . . . . .	15
7. Mechanism for superconductivity . . . . .	17
8. Towards a microscopic theory . . . . .	19
9. The microscopic theory of Bardeen, Cooper, and Schrieffer . . . . .	24
10. Plan of the book . . . . .	27
 ✓ <b>2. Macroscopic Theory . . . . .</b>	<b>29</b>
1. Introduction . . . . .	29
2. Thermodynamics . . . . .	29
3. The intermediate state . . . . .	33
4. The London's electromagnetic equations . . . . .	37
5. Pippard's nonlocal theory . . . . .	43
6. General relations for a Meissner effect and infinite conductivity . . . . .	45
7. Critical fields of thin films . . . . .	49
8. Surface energy . . . . .	52
9. High field superconductivity . . . . .	55
 <b>3. Electrons and the Lattice . . . . .</b>	<b>62</b>
1. Introduction . . . . .	62
2. The rigid lattice . . . . .	63
3. One electron in a periodic potential . . . . .	64
4. Many independent electrons . . . . .	69
5. Quantization of the electron field . . . . .	71
6. Energy-level scheme: Fermi surface . . . . .	78
7. Independent electrons at a finite temperature . . . . .	81

8. Electron-electron interaction.....	85
9. Long-range part of the Coulomb interaction.....	87
10. Self-consistent field.....	93
11. The lattice.....	99
12. Macroscopic theory of electrons and the lattice.....	106
13. Interaction between electrons and lattice waves.....	109
14. Validity of the adiabatic approximation.....	115
15. Electron-electron interaction via the phonons.....	117
16. Some historical remarks.....	122
17. Summary.....	123
<b>4. The Superconducting Ground State.....</b>	<b>125</b>
1. The model.....	125
2. Cooper's problem.....	126
3. The wave function of BCS.....	131
4. Spurious degeneracy.....	142
5. The criterion for superconductivity.....	143
6. The excited states.....	146
7. The properties of the quasi-particles.....	151
8. Correlation in the ground state.....	155
9. Many-particle aspects.....	157
10. Pairs with parallel spin.....	160
11. The Hartree approximation.....	163
12. The validity of the wave function.....	164
13. Exact pairing.....	167
<b>5. The Thermodynamics of a Superconductor.....</b>	<b>169</b>
1. Introduction.....	169
2. The sum-over-states.....	171
3. One-parameter model of BCS.....	175
4. Modifications due to the phonons.....	182
5. The magnitude and properties of $T_c$ .....	186
6. Properties of the gap parameter.....	193
7. Isotope effect.....	196
8. Properties of the critical magnetic field.....	199
9. Entropy and specific heat.....	204
10. Spin susceptibility of electrons.....	208
11. Properties of small samples.....	209
12. Summary of comparison of theory with experiments ..	211
<b>6. Electrodynamics.....</b>	<b>213</b>
1. Introduction.....	213
2. Some early results concerning the Meissner effect.....	215

3. The effect of a general external field.....	218
4. Longitudinal fields and the problem of gauge invariance	226
5. Self-consistent method.....	232
6. Critique of derivations of the electromagnetic properties	241
7. Link with "boson" theories.....	251
8. Comparison of theory and experiment.....	253
9. Conclusion.....	266
<b>7. Effects of impurities.....</b>	<b>268</b>
1. Introduction.....	268
2. The effect of impurities on the response function.....	270
3. Infinite conductivity.....	272
4. Thermal conductivity.....	276
5. Effect of nonmagnetic impurities on the transition temperature.....	282
6. Effect of magnetic impurities.....	285
<b>8. Quantization of Flux.....</b>	<b>291</b>
1. Quantization of flux.....	291
2. Transition temperature of a ring.....	301
3. Persistent currents.....	304
<b>9. The Ginzburg-Landau Equations.....</b>	<b>306</b>
1. Introduction.....	306
2. Derivation of the Ginzburg-Landau equations.....	307
3. The meaning of $\zeta$ .....	315
4. Critical field of a thin film.....	315
5. Critical current in a thin film.....	317
6. The surface energy.....	318
7. Application to type II superconductors .....	323
<b>10. Tunneling of Electrons into Superconductors.....</b>	<b>326</b>
1. Basic processes.....	326
2. Formalism.....	329
3. The effect of the phonons.....	336
4. Tunneling of supercurrents.....	342
<b>11. Collective Excitations and the Coulomb Interaction.....</b>	<b>347</b>
1. Introduction.....	347
2. Collective excitations in a superfluid with short-range forces.....	348
3. The free-electron gas.....	350
4. The screening of an external field.....	352
5. Electrons and phonons.....	357
6. Superconductivity again .....	361

<b>12. Other Fermi Superfluids . . . . .</b>	<b>366</b>
1. Introduction . . . . .	366
2. Liquid He <sup>3</sup> . . . . .	366
3. "Superfluid" model of the nucleus. . . . .	369
<b>Appendix 1. Perturbation Theory . . . . .</b>	<b>373</b>
1. Introduction . . . . .	373
2. The sum-over-states . . . . .	374
3. Linked-cluster expansion . . . . .	384
4. Other interactions . . . . .	388
5. Expansion for a response function . . . . .	389
6. Self-energy and lifetime of a quasi-particle . . . . .	395
7. Stability of the normal state . . . . .	399
8. Schafroth's theorem . . . . .	403
<b>Appendix 2. The Role of the Phonons . . . . .</b>	<b>408</b>
1. The integral equations . . . . .	408
2. The properties of the system . . . . .	419
<b>Appendix 3. Relation between the Penetration Depth and Kernel Function, <math>K(\mathbf{q}, \omega)</math> . . . . .</b>	<b>424</b>
1. Relation between $\lambda$ and $Z(\omega)$ . . . . .	424
2. Relation between $Z(\omega)$ and $K(\mathbf{q}, \omega)$ for specular reflection	425
<b>Appendix 4. Response Function in the Presence of Impurities . . . . .</b>	<b>427</b>
1. Calculation of response function . . . . .	427
2. London limit . . . . .	439
Table A. The thermodynamic functions . . . . .	443
Table B. Penetration depth, $\lambda(T)$ . . . . .	444
Table C. The complex conductivity as a function of frequency and temperature . . . . .	445
<b>References . . . . .</b>	<b>447</b>
<b>Index to Symbols . . . . .</b>	<b>457</b>
<b>Notes on Recent Developments . . . . .</b>	<b>461</b>
<b>Index . . . . .</b>	<b>465</b>
