Foreword . . . . .	vi
Introduction . . . . .	vii
Chapter I. THEORY OF THE JOSEPHSON EFFECT . . . . .	1
§ 1. Physics of the Josephson effect . . . . .	1
§ 2. Theory of the stationary Josephson current . . . . .	5
1. Microscopic theory . . . . .	5
2. Method of the tunnelling Hamiltonian . . . . .	9
3. Temperature and concentration dependence of $I_c$ . . . . .	14
4. Energy of weak superconductors . . . . .	18
§ 3. Nonstationary Josephson effect . . . . .	21
1. General expression for the current . . . . .	21
2. Adiabatic approximation . . . . .	23
3. Analysis of limiting cases . . . . .	26
§ 4. Electrodynamics of weak superconductivity. . . . .	28
1. Nonlinear wave equation . . . . .	28
2. Electrodynamics of the Josephson effect in films . . . . .	33
3. Equation for the phase for point contacts . . . . .	35
§ 5. Theory of current-voltage characteristics of Josephson currents. . . . .	37
1. Resonance absorption of energy of alternating Josephson current in a magnetic field . . . . .	37
2. Resonance current-voltage characteristics associated with the excitation of standing electromagnetic waves by Josephson current density waves . . . . .	41
§ 6. One-dimensional vortex structures . . . . .	45
1. Basic equations . . . . .	45
2. Penetration of vortices into tunnel junctions. Meissner and mixed state . . . . .	47
3. Motion of vortex structures in the mixed state and the non- stationary Josephson effect . . . . .	55
§ 7. Wave propagation in the mixed state and quantum fluctuations . . . . .	59
1. Phase quantization . . . . .	59
2. Dispersion relation for small oscillations . . . . .	62
3. Quantum fluctuations and long-range order . . . . .	65
§ 8. Theory of radiation line widths. . . . .	67

§ 9.	Josephson effect and quantum interference . . . . .	71
1.	Oscillatory dependence of the critical current on the magnetic field . . . . .	72
2.	Superconducting interferometers . . . . .	75
3.	Weakly coupled superconducting ring . . . . .	79
§10.	Analogs and other types of weak superconductivity . . . . .	81
1.	Current oscillations in superconducting filaments. Weak coupling . . . . .	81
2.	Nonstationary effects in the mixed state of type two superconductors . . . . .	85
3.	Parallel critical currents in SIN-systems . . . . .	88
4.	Josephson effect in superfluid helium . . . . .	92
Chapter II. EXPERIMENTAL INVESTIGATION OF THE STATIONARY JOSEPHSON EFFECT . . . . . 94		
§11.	Methods for preparing tunnel junctions . . . . .	94
1.	Observation of supercurrents in tunnel junctions . . . . .	94
2.	Methods for preparing thin dielectric layers . . . . .	96
3.	Aspects of the preparation of Josephson tunnel junctions . . . . .	98
§12.	Characteristics of critical Josephson currents . . . . .	103
1.	Magnitude of critical current in zero magnetic field . . . . .	103
2.	Circuit for automatic recording of $I_c(H)$ characteristics . . . . .	107
3.	Dependence of the critical current on the magnetic field . . . . .	110
§13.	Complex weakly coupled superconducting systems . . . . .	115
1.	Superconducting rings incorporating Josephson junctions. Superconducting interferometers . . . . .	115
2.	Point contacts and other weakly coupled systems . . . . .	118
§14.	Use of stationary Josephson effect in experimental techniques . . . . .	121
1.	Superconducting galvanometer and other devices utilizing Clarke-type junctions as the sensitive element . . . . .	121
2.	Voltage oscillations in a Clarke junction and their use in measuring devices . . . . .	122
3.	The magnetometer of Zimmerman and Silver . . . . .	124
Chapter III. EXPERIMENTAL INVESTIGATION OF THE NONSTATIONARY JOSEPHSON EFFECT . . . . . 128		
§15.	Basic experimental facts . . . . .	128
§16.	Resonance singularities on the current-voltage characteristics of Josephson tunnel junctions . . . . .	129
1.	Interaction of Josephson current density with travelling electromagnetic waves . . . . .	129
2.	Steplike structure of current-voltage characteristics . . . . .	131
3.	Current resonances for junctions included in low-ohmic circuits . . . . .	137
4.	Coarse and fine structure of the $dV/dI$ characteristics . . . . .	139

§17.	Direct detection and study of the properties of Josephson electromagnetic radiation . . . . .	144
1.	The problem of matching a tunnel oscillator to a waveguide circuit . . . . .	144
2.	Some methods of incorporating a tunnel junction into a waveguide circuit . . . . .	145
3.	Spectral composition of Josephson radiation . . . . .	148
4.	Electromagnetic radiation from point contacts . . . . .	151
§18.	Interaction of alternating Josephson current with external electromagnetic radiation . . . . .	153
1.	Induced steplike structure of current-voltage characteristics . . . . .	153
2.	Influence of the strength of coupling on the characteristic of induced steps . . . . .	156
3.	Detection of electromagnetic radiation in the far infrared region . . . . .	158
4.	Frequency mixing in Josephson junctions . . . . .	160
§19.	Some applications of the nonstationary Josephson effect . . . . .	162
1.	Measurement of $h/e$ . . . . .	162
2.	Spectroscopy of solids at low temperatures . . . . .	163
3.	Low temperature electronic devices based on Josephson tunnel junctions . . . . .	164
§20.	Fluctuations in Josephson junctions . . . . .	166
1.	Resistive-fluctuating conductivity of point contacts . . . . .	167
2.	Effect of fluctuations on the dependence of the Josephson current on magnetic fields . . . . .	169
3.	Fluctuation conductivity and quantum coherence effects above the critical temperature . . . . .	174
Conclusion . . . . .		176
Bibliography . . . . .		178
