<b>Preface to the Handbook of Medical Imaging</b>	<b>xxiii</b>
<b>Introduction to Volume 2: Medical Image Processing and Analysis</b>	<b>xxv</b>
<b>1 Statistical Image Reconstruction Methods</b>	<b>1</b>
1.1 Introduction	3
1.2 The problem	4
1.2.1 Transmission measurements	5
1.2.2 Reconstruction problem	7
1.2.3 Likelihood-based estimation	10
1.2.4 Penalty function	12
1.2.5 Concavity	13
1.3 Optimization algorithms	14
1.3.1 Why so many algorithms?	14
1.3.2 Optimization transfer principle	15
1.3.3 Convergence rate	16
1.3.4 Parabola surrogate	17
1.4 EM algorithms	18
1.4.1 Transmission EM algorithm	20
1.4.2 EM algorithms with approximate M-steps	25
1.4.3 EM algorithm with Newton M-step	25
1.4.4 Diagonally-scaled gradient-ascent algorithms	27
1.4.5 Convex algorithm	28
1.4.6 Ordered-subsets EM algorithm	34
1.4.7 EM algorithms with nonseparable penalty functions	35
1.5 Coordinate-ascent algorithms	35
1.5.1 Coordinate-ascent Newton-Raphson	36
1.5.2 Variation 1: Hybrid Poisson/polynomial approach	39
1.5.3 Variation 2: 1D parabolic surrogates	39
1.6 Paraboloidal surrogates algorithms	40
1.6.1 Paraboloidal surrogate with Newton Raphson	41
1.6.2 Separable paraboloidal surrogates algorithm	41
1.6.3 Ordered subsets revisited	43

1.6.4	Paraboloidal surrogates coordinate-ascent (PSCA) algorithm	44	2.4.5	Hough transforms	94
1.6.5	Grouped coordinate ascent algorithm	45	2.5	Region-based segmentation	98
1.7	Direct algorithms	45	2.5.1	Region growing	98
1.7.1	Conjugate gradient algorithm	45	2.5.2	Region splitting and merging	99
1.7.2	Quasi-Newton algorithm	46	2.5.3	Connected component labeling	100
1.8	Alternatives to Poisson models	46	2.6	Classification	101
1.8.1	Algebraic reconstruction methods	47	2.6.1	Basic classifiers and clustering algorithms	103
1.8.2	Methods to avoid	47	2.6.2	Adaptive fuzzy <i>c</i> -means with INU estimation	109
1.8.3	Weighted least-squares methods	48	2.6.3	Decision trees	110
1.9	Emission reconstruction	49	2.6.4	Artificial neural networks	111
1.9.1	EM Algorithm	50	2.6.5	Contextual classifiers	116
1.9.2	An improved EM algorithm	51	2.7	Discussion and Conclusion	119
1.9.3	Other emission algorithms	52	2.8	Acknowledgements	120
1.10	Advanced topics	52	2.9	References	120
1.10.1	Choice of regularization parameters	52	<b>3</b>	<b>Image Segmentation Using Deformable Models</b>	<b>129</b>
1.10.2	Source-free attenuation reconstruction	53	3.1	Introduction	131
1.10.3	Dual energy imaging	53	3.2	Parametric deformable models	133
1.10.4	Overlapping beams	53	3.2.1	Energy minimizing formulation	134
1.10.5	Sinogram truncation and limited angles	53	3.2.2	Dynamic force formulation	136
1.10.6	Parametric object priors	53	3.2.3	External forces	138
1.11	Example results	54	3.2.4	Numerical implementation	144
1.12	Summary	56	3.2.5	Discussion	145
1.13	Acknowledgements	57	3.3	Geometric deformable models	146
1.14	Appendix: Poisson properties	57	3.3.1	Curve evolution theory	146
1.15	References	58	3.3.2	Level set method	147
<b>2</b>	<b>Image Segmentation</b>	<b>71</b>	3.3.3	Speed functions	150
2.1	Introduction	73	3.3.4	Relationship to parametric deformable models	152
2.2	Image preprocessing and acquisition artifacts	73	3.3.5	Numerical implementation	153
2.2.1	Partial volume effect	74	3.3.6	Discussion	154
2.2.2	Intensity nonuniformity (INU)	74	3.4	Extensions of deformable models	154
2.3	Thresholding	78	3.4.1	Deformable Fourier models	155
2.3.1	Shape-based histogram techniques	78	3.4.2	Deformable models using modal analysis	157
2.3.2	Optimal thresholding	79	3.4.3	Deformable superquadrics	159
2.3.3	Advanced thresholding methods for simultaneous segmentation and INU correction	84	3.4.4	Active shape models	161
2.4	Edge-based techniques	88	3.4.5	Other models	167
2.4.1	Border tracing	88	3.5	Conclusion and future directions	167
2.4.2	Graph searching	89	3.6	Further reading	168
2.4.3	Dynamic programming	91	3.7	Acknowledgments	168
2.4.4	Advanced border detection methods	93	3.8	References	168

<b>4 Morphological Methods for Biomedical Image Analysis</b>	<b>175</b>		
4.1 Introduction	177		
4.2 Binary morphological operators	182		
4.2.1 Increasing and translation invariant operators	182		
4.2.2 Erosion and dilation	182		
4.2.3 Representational power of erosions and dilations	185		
4.2.4 Opening and closing	187		
4.2.5 Representational power of structural openings and closings	190		
4.2.6 The hit-or-miss operator	192		
4.2.7 Morphological gradients	194		
4.2.8 Conditional dilation	195		
4.2.9 Annular openings and closings	195		
4.2.10 Morphological filters	199		
4.3 Morphological representation of binary images	201		
4.3.1 The discrete size transform	201		
4.3.2 The pattern spectrum	202		
4.3.3 The morphological skeleton transform	204		
4.4 Grayscale morphological operators	206		
4.4.1 Threshold decomposition	207		
4.4.2 Increasing and translation invariant operators	209		
4.4.3 Erosion and dilation	209		
4.4.4 Representational power of erosions and dilations	214		
4.4.5 Opening and closing	214		
4.4.6 Representational power of structural openings and closings	218		
4.4.7 Flat image operators	218		
4.4.8 Morphological gradients	220		
4.4.9 Opening and closing top-hat	221		
4.4.10 Conditional dilation	223		
4.4.11 Morphological filters	223		
4.5 Grayscale discrete size transform	225		
4.6 Morphological image reconstruction	227		
4.6.1 Reconstruction of binary images	227		
4.6.2 Reconstruction of grayscale images	230		
4.6.3 Examples	233		
4.7 Morphological image segmentation	237		
4.7.1 The distance transform	237		
4.7.2 Skeleton by influence zones (SKIZ)	240		
4.7.3 Watershed-based segmentation of nonoverlapping particles	241		
4.7.4 Geodesic SKIZ	242		
4.7.5 Watershed-based segmentation of overlapping particles	245		
4.7.6 Grayscale segmentation	246		
4.7.7 Examples	253		
		4.8 Conclusions and further discussion	260
		4.9 Acknowledgments	262
		4.10 References	263
<b>5 Feature Extraction</b>	<b>273</b>		
5.1 Introduction	275		
5.1.1 Why features? Classification (formal or informal)	275	almost always depends on them	275
5.1.2 Review of applications in medical image analysis	276		
5.1.3 Roots in classical methods	278		
5.1.4 Importance of data and validation	279		
5.2 Invariance as a motivation for feature extraction	279		
5.2.1 Robustness as a goal	279		
5.2.2 Problem-dependence is unavoidable	280		
5.3 Examples of features	280		
5.3.1 Features extracted from 2D images	280		
5.4 Feature selection and dimensionality reduction for classification	286		
5.4.1 The curse of dimensionality — subset problem	286		
5.4.2 Classification versus representation	286		
5.4.3 Classifier-independent feature analysis for classification	287		
5.4.4 Classifier-independent feature extraction	291		
5.4.5 How useful is a feature: separability between classes	291		
5.4.6 Classifier-independent feature analysis in practice	295		
5.4.7 Potential for separation: nonparametric feature extraction	296		
5.4.8 Finding the optimal subset	304		
5.4.9 Ranking the features	306		
5.5 Features in practice	308		
5.5.1 Caveats	308		
5.5.2 Ultrasound tissue characterization	308		
5.5.3 Breast MRI	325		
5.6 Future developments	335		
5.7 Acknowledgments	335		
5.8 References	335		
<b>6 Extracting Surface Models of the Anatomy from Medical Images</b>	<b>343</b>		
6.1 Introduction	345		
6.2 Surface representations	345		
6.2.1 Point set	345		
6.2.2 Triangular mesh	346		
6.2.3 Curved surfaces	348		
6.3 Iso-surface extraction	348		
6.3.1 Hexahedral decomposition	349		

6.3.2	Tetrahedral decomposition	350	7.7	Discussion	439
6.3.3	A look-up procedure to replace the determinant test	355	7.8	References	440
6.3.4	Computing surface curvatures	357	<b>COLOR PLATES</b>		
6.3.5	Extracting rib (or ridge, or crest) lines	358	<b>8 Image Registration 447</b>		
6.3.6	Iso-surface examples	359	8.1	Introduction	449
6.4	Building surfaces from two-dimensional contours	360	8.1.1	Operational goal of registration	449
6.4.1	Extracting two-dimensional contours from an image	361	8.1.2	Classification of registration methods	450
6.4.2	Tiling contours into a surface portion	363	8.2	Geometrical transformations	451
6.5	Some topological issues in deformable surfaces	368	8.2.1	Rigid transformations	452
6.5.1	Tensor-product B-splines	369	8.2.2	Nonrigid transformations	454
6.5.2	Dynamic changes of topology	371	8.2.3	Rectification	460
6.6	Optimization	371	8.3	Point-based methods	463
6.6.1	Smoothing	373	8.3.1	Points in rigid transformations	469
6.6.2	Simplification and levels of detail	376	8.3.2	Points in scaling transformations	473
6.7	Exemplary algorithms operating on polygonal surfaces	383	8.3.3	Points in perspective projections	474
6.7.1	Apparent contours and perspective registration	383	8.3.4	Points in curved transformations	476
6.7.2	Surface projection for x-ray simulations	387	8.4	Surface-based methods	478
6.8	Conclusion and perspective	390	8.4.1	Disparity functions	478
6.9	References	390	8.4.2	Head and hat algorithm	482
<b>7 Medical Image Interpretation 399</b>			8.4.3	Distance definitions	482
7.1	Introduction	400	8.4.4	Distance transform approach	483
7.2	Image segmentation	404	8.4.5	Iterative closest point algorithm	484
7.2.1	Algorithms for extracting image primitives	404	8.4.6	Weighted geometrical feature algorithm	485
7.2.2	Knowledge-based segmentation	405	8.5	Intensity-based methods	487
7.3	Feature-based labeling/classification	409	8.5.1	Similarity measures	488
7.3.1	Feature extraction from image primitives	409	8.5.2	Capture ranges and optimization	496
7.3.2	Labeling/classification of image primitives	410	8.5.3	Applications of intensity-based methods	498
7.4	Knowledge representations and high-level image analysis	413	8.6	Conclusion	504
7.4.1	Knowledge representations	413	8.7	Acknowledgments	505
7.4.2	Classification using a knowledge base	420	8.8	References	506
7.4.3	High-level feature representation	420	<b>9 Signal Modeling for Tissue Characterization 515</b>		
7.4.4	High-level image interpretation	421	9.1	Introduction	516
7.5	Image interpretation systems	423	9.2	Continuous-to-discrete transformations	519
7.5.1	Rule-based	423	9.3	Ultrasonic waveform models	520
7.5.2	Semantic network-based	426	9.3.1	Object models	520
7.5.3	Atlas-based	429	9.3.2	Pulse models	526
7.6	Applications	434	9.3.3	Sensitivity function	530
7.6.1	Visualization	434	9.3.4	Object deformation model	530
7.6.2	Image measurements	435	9.3.5	Echo model for elasticity imaging	533
7.6.3	Characterization	437	9.4	Ultrasonic applications	534
7.6.4	Content-based image archiving/retrieval	438			

9.5	Magnetic resonance waveform models	536	<b>11 Echocardiography</b>	<b>609</b>
9.5.1	Object description	538	11.1 Introduction	611
9.5.2	The MR data set	539	11.1.1 Overview of cardiac anatomy	611
9.6	Continuous-to-discrete transformations revisited	542	11.1.2 Normal physiology	614
9.7	MR applications	545	11.1.3 Role of ultrasound in cardiology	616
9.7.1	$T_1$ and $T_2$ as tissue parameters	545	11.2 The echocardiographic examination	617
9.7.2	Synthetic imaging	546	11.2.1 Image acquisition in standard views	617
9.7.3	Contrast uptake studies	547	11.2.2 M-mode and two dimensional echocardiography	618
9.7.4	Spectroscopy	550	11.2.3 doppler echocardiography	619
9.8	Summary	556	11.2.4 Three-dimensional echocardiography	620
9.9	Acknowledgements	556	11.3 The ventricles	621
9.10	References	557	11.3.1 Ventricular volume	621
<b>10 Validation of Medical Image Analysis Techniques</b>		<b>567</b>	11.3.2 Ventricular mass	626
10.1	Introduction	569	11.3.3 Ventricular function	627
10.2	Types of image analysis problems	570	11.3.4 Ventricular shape	633
10.3	Definitions of basic performance metrics	571	11.3.5 Clinical evaluation of the left ventricle	634
10.3.1	Performance metrics for measurement problems	571	11.4 The valves	637
10.3.2	Performance metrics for detection problems	571	11.4.1 Assessment of the valves from echocardiograms	637
10.3.3	Performance metrics for image segmentation	577	11.4.2 Valve stenosis	638
10.4	Methodologies for training and testing	581	11.4.3 Valve regurgitation	642
10.4.1	Half-half	582	11.5 Automated analysis	650
10.4.2	Leave-one-out	582	11.5.1 Techniques for border detection from echocardiographic images	654
10.4.3	N-way cross-validation	583	11.5.2 Validation	661
10.5	Statistical tests	583	11.6 Acknowledgments	664
