## Table of Contents

<b>Symbols</b> .....	XIX
<b>Acronyms</b> .....	XXVII
<b>1 Introduction</b> .....	1
1.1 What are Magnetic Domains? .....	1
1.2 History of the Domain Concept .....	2
1.2.1 The Domain Idea .....	2
1.2.2 Towards an Understanding of Domains .....	3
1.2.3 Refinements .....	6
1.3 Micromagnetics and Domain Theory .....	8
<b>2 Domain Observation Techniques</b> .....	11
2.1 Introduction .....	11
2.2 Bitter Patterns .....	12
2.2.1 General Features .....	12
2.2.2 Contrast Theory .....	14
2.2.3 The Importance of Agglomeration Phenomena in Colloids .....	15
2.2.4 Visible and Invisible Features .....	18
2.2.5 Special Methods .....	20
2.2.6 Summary .....	22
2.3 Magneto-Optical Methods .....	23
2.3.1 Magneto-Optical Effects .....	24
2.3.2 The Geometry of the Magneto-Optical Rotation Effects .....	25
2.3.3 Magneto-Optical Contrast in Kerr Microscopy .....	28
2.3.4 Interference and Enhancement by Dielectric Coatings .....	30
2.3.5 Kerr Microscopes .....	33
2.3.6 The Illumination Path .....	35

2.3.7	Digital Contrast Enhancement and Image Processing	36
2.3.8	Quantitative Kerr Microscopy .....	39
2.3.9	Dynamic Domain Imaging .....	40
2.3.10	Laser Scanning Optical Microscopy .....	42
2.3.11	Sample Preparation .....	43
2.3.12	Other Magneto-Optical Effects .....	44
2.3.13	Summary .....	48
2.4	Transmission Electron Microscopy (TEM) .....	49
2.4.1	Fundamentals of Magnetic Contrast in TEM .....	49
2.4.2	Conventional Lorentz Microscopy .....	50
2.4.3	Differential Phase Microscopy .....	54
2.4.4	Electron Holography .....	56
2.4.5	Special Procedures in Lorentz Microscopy .....	59
2.4.6	Summary .....	60
2.5	Electron Reflection and Scattering Methods .....	61
2.5.1	Overview .....	61
2.5.2	Type I or Secondary Electron Contrast .....	62
2.5.3	Type II or Backscattering Contrast .....	63
2.5.4	Electron Polarization Analysis .....	67
2.5.5	Other Electron Scattering and Reflection Methods ..	69
2.5.6	Summary .....	70
2.6	Mechanical Microscanning Techniques .....	71
2.6.1	Magnetic Force Microscopy (MFM) .....	71
2.6.2	Near-Field Optical Scanning Microscopy .....	78
2.6.3	Other Magnetic Scanning Methods .....	80
2.7	X-ray, Neutron and Other Methods .....	81
2.7.1	X-ray Topography of Magnetic Domains .....	82
2.7.2	Neutron Topography .....	86
2.7.3	Domain Imaging Based on X-Ray Spectroscopy .....	86
2.7.4	Magnetotactic Bacteria .....	89
2.7.5	Domain-Induced Surface Profile .....	89
2.7.6	Domain Observation in the Bulk? .....	90
2.8	Integral Methods Supporting Domain Analysis .....	92
2.9	Comparison of Domain Observation Methods .....	95
<b>3</b>	<b>Domain Theory .....</b>	<b>99</b>
3.1	The Purpose of Domain Theory .....	99
3.2	Energetics of a Ferromagnet .....	100
3.2.1	Overview .....	100
3.2.2	Exchange Energy .....	101
3.2.3	Anisotropy Energy .....	104
3.2.4	External Field (Zeeman) Energy .....	109
3.2.5	Stray Field Energy .....	109
3.2.6	Magneto-Elastic Interactions and Magnetostriction ..	125
3.2.7	The Micromagnetic Equations .....	138

3.2.8	Review of the Energy Terms of a Ferromagnet . . . . .	144
3.3	The Origin of Domains . . . . .	144
3.3.1	Global Arguments for Large Samples . . . . .	145
3.3.2	High-Anisotropy Particles . . . . .	151
3.3.3	Ideally Soft Magnetic Materials . . . . .	155
3.3.4	The Effect of Anisotropy in Soft Magnetic Materials .	165
3.3.5	Résumé: The Absence and Presence of Domains . . . .	168
3.4	Phase Theory of Domains in Large Samples . . . . .	170
3.4.1	Introduction . . . . .	171
3.4.2	The Fundamental Equations of Phase Theory . . . . .	171
3.4.3	The Analysis of Cubic Crystals as an Example . . . .	178
3.4.4	Field-Induced Critical Points . . . . .	182
3.4.5	Quasi-Domains . . . . .	187
3.5	Small Particle Switching . . . . .	188
3.5.1	Overview . . . . .	188
3.5.2	Uniform Single-Domain Switching . . . . .	190
3.5.3	Classifying Switching and Nucleation Processes . . .	193
3.5.4	Classical Solutions . . . . .	196
3.5.5	Numeric Evaluation in the General Case . . . . .	198
3.5.6	Continuous Nucleation (Second-Order Transitions) ..	200
3.6	Domain Walls . . . . .	201
3.6.1	The Structure and Energy of Infinite Planar Walls . .	201
3.6.2	Generalized Walls in Uniaxial Materials . . . . .	212
3.6.3	Walls in Cubic Materials . . . . .	217
3.6.4	Domain Walls in Thin Films . . . . .	223
3.6.5	Substructures of Walls—Bloch Lines and Bloch Points . . . . .	241
3.6.6	Wall Dynamics: Gyrotropic Domain Wall Motion . . .	254
3.6.7	Wall Friction and Disaccommodation-Dominated Motion . . . . .	264
3.6.8	Eddy-Current-Dominated Wall Motion . . . . .	268
3.6.9	Résumé: Wall Damping Phenomena and Losses. . . .	271
3.7	Theoretical Analysis of Characteristic Domains . . . .	273
3.7.1	Flux Collection Schemes on Slightly Misoriented Surfaces . . . . .	274
3.7.2	Dense Stripe Domains . . . . .	279
3.7.3	Domains in High-Anisotropy Perpendicular Films . .	287
3.7.4	Closure Domains . . . . .	296
3.7.5	Domain Refinement (Domain Branching) . . . . .	311
3.7.6	The Néel Block as a Classical Example . . . . .	328
3.8	Résumé . . . . .	335

## XVI Table of Contents

<b>4 Material Parameters for Domain Analysis . . . . .</b>	337
4.1 Intrinsic Material Parameters . . . . .	337
4.2 Mechanical Measurements . . . . .	339
4.2.1 Torque Methods . . . . .	339
4.2.2 Field Gradient Methods . . . . .	342
4.3 Magnetic Measurements . . . . .	343
4.3.1 Overview: Methods and Measurable Quantities . . . . .	343
4.3.2 Magnetometric Methods . . . . .	344
4.3.3 Inductive Measurements . . . . .	344
4.3.4 Optical Magnetometers . . . . .	348
4.3.5 Evaluation of Magnetization Curves . . . . .	349
4.4 Resonance Experiments . . . . .	353
4.4.1 Overview: Types of Resonance . . . . .	353
4.4.2 Theory of Ferromagnetic Resonance . . . . .	354
4.4.3 Spin Wave Resonance . . . . .	355
4.4.4 Light Scattering Experiments . . . . .	356
4.4.5 Wall and Domain Resonance Effects . . . . .	356
4.5 Magnetostriction Measurements . . . . .	357
4.5.1 Indirect Magnetostriction Measurements . . . . .	357
4.5.2 Direct Measurements: General Procedures . . . . .	358
4.5.3 Techniques of Elongation Measurements . . . . .	359
4.6 Domain Methods . . . . .	362
4.6.1 Suitable Domain Patterns . . . . .	362
4.6.2 Band Domain Width in Bubble Materials . . . . .	362
4.6.3 Surface Domain Width in Bulk Uniaxial Crystals . . . . .	364
4.6.4 Internal Stress Measurement by Domain Experiments . . . . .	365
4.6.5 Stripe Domain Nucleation and Annihilation . . . . .	365
4.6.6 Domain Wall Experiments in Soft Magnetic Materials . . . . .	367
4.6.7 Measurements of Domain Wall Dynamics . . . . .	368
4.7 Thermal Evaluation of the Exchange Constant . . . . .	368
4.7.1 The Curie Point . . . . .	369
4.7.2 Molecular Field Theory . . . . .	369
4.7.3 Low Temperature Variation of Magnetization . . . . .	370
4.8 Theoretical Guidelines for Material Constants . . . . .	370
4.8.1 Temperature Dependence of Anisotropy Parameters . . . . .	370
4.8.2 Mixing Laws for Magnetic Insulators . . . . .	371
4.8.3 Empirical Rules for Alloy Systems . . . . .	372
<b>5 Domain Observation and Interpretation . . . . .</b>	373
5.1 Classification of Materials and Domains . . . . .	373
5.1.1 Crystal and Magnetic Symmetry . . . . .	373
5.1.2 Reduced Material Parameters . . . . .	374
5.1.3 Size, Dimension and Surface Orientation . . . . .	375
5.1.4 Further Aspects and Synopsis . . . . .	376
5.2 Bulk High-Anisotropy Uniaxial Materials . . . . .	378

5.2.1	Branched Domain Patterns . . . . .	378
5.2.2	Applied Field Effects . . . . .	383
5.2.3	Polycrystalline Permanent Magnet Materials . . . . .	386
5.3	Bulk Cubic Crystals . . . . .	388
5.3.1	Surfaces with Two Easy Axes . . . . .	388
5.3.2	Crystals with One Easy Axis in the Surface . . . . .	391
5.3.3	Stress Patterns . . . . .	395
5.3.4	Slightly Misoriented Surfaces . . . . .	398
5.3.5	Strong Misorientation . . . . .	405
5.4	Amorphous and Nanocrystalline Ribbons . . . . .	410
5.4.1	The As-Quenched State of Amorphous Ribbons . . . . .	411
5.4.2	Ordered Domain States of Metallic Glasses . . . . .	413
5.4.3	Wall Studies on Metallic Glasses . . . . .	419
5.4.4	Domains on Soft-Magnetic Nanocrystalline Ribbons . . . . .	421
5.5	Magnetic Films with Low Anisotropy . . . . .	422
5.5.1	Overview: Classification of Magnetic Films . . . . .	422
5.5.2	Thin Films . . . . .	423
5.5.3	Thick Films with In-Plane Anisotropy . . . . .	432
5.5.4	Thin and Thick Film Elements . . . . .	437
5.5.5	Thick Films with Weak Out-of-Plane Anisotropy . . . . .	450
5.5.6	Cubic Single-Crystal Films and Platelets . . . . .	454
5.5.7	Double Films . . . . .	459
5.6	Films with Strong Perpendicular Anisotropy . . . . .	472
5.6.1	Extended Domain Patterns . . . . .	472
5.6.2	Localized Domains (Bubbles) . . . . .	479
5.6.3	Domain Wall Investigations in Perpendicular Films . . . . .	481
5.7	Particles, Needles and Wires . . . . .	483
5.7.1	Observations on High-Anisotropy Uniaxial Particles . . . . .	483
5.7.2	Very Small Particles . . . . .	484
5.7.3	Whiskers . . . . .	488
5.7.4	Magnetic Wires . . . . .	489
5.8	How Many Different Domain Patterns? . . . . .	491
6	<b>The Relevance of Domains . . . . .</b>	493
6.1	Overview . . . . .	493
6.2	Bulk Soft-Magnetic Materials . . . . .	494
6.2.1	Electrical Steels . . . . .	495
6.2.2	High-Permeability Alloys . . . . .	511
6.2.3	Amorphous and Nanocrystalline Alloys . . . . .	513
6.2.4	Spinel Ferrites . . . . .	518
6.3	Permanent Magnets . . . . .	519
6.3.1	Nucleation-Type Sintered Magnets . . . . .	521
6.3.2	Pinning-Type Magnets . . . . .	524
6.3.3	Small-Particle and Nanocrystalline Magnets . . . . .	525
6.4	Recording Media . . . . .	530

## XVIII Table of Contents

6.4.1	Longitudinal Recording . . . . .	530
6.4.2	Perpendicular Recording . . . . .	537
6.4.3	Magneto-Optical Recording . . . . .	539
6.5	Thin-Film Devices . . . . .	543
6.5.1	Inductive Thin-Film Heads in Magnetic Recording . . . . .	543
6.5.2	Magnetoresistive Sensors . . . . .	547
6.5.3	Thin-Film Memories . . . . .	551
6.6	Domain Propagation Devices . . . . .	556
6.6.1	Bubble Memories . . . . .	557
6.6.2	Domain Shift Register Devices . . . . .	562
6.6.3	Magneto-Optical Display and Sensor Devices . . . . .	563
6.7	Domains and Hysteresis . . . . .	564
<b>References</b>	. . . . .	<b>567</b>
