# Contents

<b>1</b>	<b>Introduction</b> .....	1
<b>2</b>	<b>The Structure of Condensed Matter</b> .....	13
2.1	Characterization of the Structure .....	14
2.1.1	Short- and Long-Range Order .....	14
2.1.2	Order in the Center-of-Mass Positions, Orientation, and Chemical Composition .....	19
2.2	Classification of Condensed Matter According to Structure....	20
2.2.1	Solid Phase .....	20
2.2.2	Liquid Phase .....	22
2.2.3	Mesomorphic Phases .....	23
<b>3</b>	<b>The Building Blocks of Solids</b> .....	31
3.1	Solids as Many-Particle Systems .....	31
3.1.1	The Hamiltonian of Many-Particle Systems .....	32
3.1.2	Effects of Applied Fields .....	34
3.1.3	Relativistic Effects .....	36
3.2	The State of Ion Cores .....	38
3.2.1	Hund's Rules .....	41
3.2.2	Angular Momentum and Magnetic Moment .....	44
3.2.3	The Magnetic Hamiltonian of Atomic Electrons .....	46
3.2.4	Magnetization and Susceptibility .....	47
3.2.5	Langevin or Larmor Diamagnetism .....	49
3.2.6	Atomic Paramagnetism .....	51
3.2.7	Van Vleck Paramagnetism .....	60
3.2.8	Electron Spin Resonance .....	61
3.3	The Role of Nuclei .....	68
3.3.1	Interaction with Nuclear Magnetic Moments .....	68
3.3.2	Nuclear Magnetic Resonance .....	71
3.3.3	The Mössbauer effect .....	72

<b>4</b>	<b>Bonding in Solids</b> .....	75
4.1	Types of Bonds and Cohesive Energy .....	75
4.1.1	Classification of Solids According to the Type of the Bond .....	76
4.1.2	Cohesive Energy .....	76
4.2	Molecular crystals .....	78
4.2.1	Van der Waals Bonds in Quantum Mechanics .....	79
4.2.2	Cohesive Energy of Molecular Crystals .....	81
4.3	Ionic Bond .....	83
4.4	Covalent Bond .....	89
4.4.1	The Valence-Bond Method .....	90
4.4.2	Polar Covalent Bond .....	94
4.4.3	The Molecular-Orbital Method .....	96
4.4.4	The LCAO Method .....	97
4.4.5	Molecular Orbitals Between Different Atoms .....	100
4.4.6	Slater Determinant Form of the Wavefunction .....	101
4.4.7	Hybridized Orbitals .....	103
4.4.8	Covalent Bonds in Solids .....	105
4.5	Metallic Bond .....	106
4.6	The Hydrogen Bond .....	106
<b>5</b>	<b>Symmetries of Crystals</b> .....	109
5.1	Translational Symmetry in Crystals .....	110
5.1.1	Translational Symmetry in Finite Crystals .....	110
5.1.2	The Choice of Primitive Vectors .....	111
5.1.3	Bravais Lattice and Basis .....	113
5.1.4	Primitive Cells, Wigner-Seitz Cells, and Bravais Cells .....	114
5.1.5	Crystallographic Positions, Directions, and Planes .....	118
5.2	The Reciprocal Lattice .....	120
5.2.1	Definition of the Reciprocal Lattice .....	120
5.2.2	Properties of the Reciprocal Lattice .....	122
5.3	Rotations and Reflections .....	124
5.3.1	Symmetry Operations and Symmetry Elements .....	124
5.3.2	Point Groups .....	127
5.4	Rotation and Reflection Symmetries in Crystals .....	135
5.4.1	Rotation Symmetries of Bravais Lattices .....	135
5.4.2	Crystallographic Point Groups .....	137
5.4.3	Crystal Systems and Bravais Groups .....	138
5.4.4	Two-Dimensional Bravais-Lattice Types .....	142
5.4.5	Three-Dimensional Bravais-Lattice Types .....	146
5.4.6	The Hierarchy of Crystal Systems .....	154
5.5	Full Symmetry of Crystals .....	157
5.5.1	Screw Axes and Glide Planes .....	157
5.5.2	Point Groups of Crystals and Crystal Classes .....	160

5.5.3	Space Groups . . . . .	162
5.5.4	Symmetries of Magnetic Crystals . . . . .	166
<b>6</b>	<b>Consequences of Symmetries . . . . .</b>	<b>171</b>
6.1	Quantum Mechanical Eigenvalues and Symmetries . . . . .	172
6.1.1	Wigner's Theorem . . . . .	172
6.1.2	Splitting of Atomic Levels in Crystals . . . . .	173
6.1.3	Spin Contributions to Splitting . . . . .	179
6.1.4	Kramers' Theorem . . . . .	182
6.1.5	Selection Rules . . . . .	184
6.2	Consequences of Translational Symmetry . . . . .	184
6.2.1	The Born–von Kármán Boundary Condition . . . . .	185
6.2.2	Bloch's Theorem . . . . .	186
6.2.3	Equivalent Wave Vectors . . . . .	189
6.2.4	Conservation of Crystal Momentum . . . . .	191
6.2.5	Symmetry Properties of Energy Eigenstates . . . . .	194
6.3	Symmetry Breaking and Its Consequences . . . . .	199
6.3.1	Symmetry Breaking in Phase Transitions . . . . .	199
6.3.2	Goldstone's Theorem . . . . .	200
<b>7</b>	<b>The Structure of Crystals . . . . .</b>	<b>203</b>
7.1	Types of Crystal Structures . . . . .	203
7.2	Cubic Crystal Structures . . . . .	205
7.2.1	Simple Cubic Structures . . . . .	205
7.2.2	Body-Centered Cubic Structures . . . . .	210
7.2.3	Face-Centered Cubic Structures . . . . .	214
7.2.4	Diamond and Sphalerite Structures . . . . .	221
7.3	Hexagonal Crystal Structures . . . . .	224
7.4	Typical Sizes of Primitive Cells . . . . .	229
7.5	Layered and Chain-Like Structures . . . . .	229
7.6	Relationship Between Structure and Bonding . . . . .	233
7.6.1	The Structure of Covalently Bonded Solids . . . . .	233
7.6.2	Structures with Nondirectional Bonds . . . . .	235
<b>8</b>	<b>Methods of Structure Determination . . . . .</b>	<b>241</b>
8.1	The Theory of Diffraction . . . . .	242
8.1.1	The Bragg and Laue Conditions of Diffraction . . . . .	242
8.1.2	Structure Amplitude and Atomic Form Factor . . . . .	246
8.1.3	Diffraction Cross Section . . . . .	249
8.1.4	The Shape and Intensity of Diffraction Peaks . . . . .	252
8.1.5	Cancellation in Structures with a Polyatomic Basis . . . . .	255
8.1.6	The Dynamical Theory of Diffraction . . . . .	258
8.2	Experimental Study of Diffraction . . . . .	261
8.2.1	Characteristic Properties of Different Types of Radiation . . . . .	261

8.2.2	The Ewald Construction	264
8.2.3	Diffraction Methods	265
8.3	Other Methods of Structure Determination	269
<b>9</b>	<b>The Structure of Real Crystals</b>	<b>273</b>
9.1	Point Defects	275
9.1.1	Vacancies	275
9.1.2	Interstitials	278
9.1.3	Pairs of Point Defects	280
9.2	Line Defects, Dislocations	283
9.2.1	Edge and Screw Dislocations	284
9.2.2	The Burgers Vector	286
9.2.3	Dislocations as Topological Defects	288
9.2.4	Disclinations	290
9.2.5	Dislocations in Hexagonal Lattices	292
9.3	Planar Defects	293
9.3.1	Stacking Faults	293
9.3.2	Partial Dislocations	294
9.3.3	Low-Angle Grain Boundaries	298
9.3.4	Coincident-Site-Lattice and Twin Boundaries	299
9.3.5	Antiphase Boundaries	300
9.4	Volume Defects	302
<b>10</b>	<b>The Structure of Noncrystalline Solids</b>	<b>303</b>
10.1	The Structure of Amorphous Materials	303
10.1.1	Models of Topological Disorder	303
10.1.2	Analysis of the Short-Range Order	305
10.2	Quasiperiodic Structures	309
10.2.1	Periodic and Quasiperiodic Functions	310
10.2.2	Incommensurate Structures	312
10.2.3	Experimental Observation of Quasicrystals	314
10.2.4	The Fibonacci Chain	317
10.2.5	Penrose Tiling of the Plane	323
10.2.6	Three-Dimensional Quasicrystals	327
<b>11</b>	<b>Dynamics of Crystal Lattices</b>	<b>331</b>
11.1	The Harmonic Approximation	331
11.1.1	Second-Order Expansion of the Potential	332
11.1.2	Expansion of the Energy for Pair Potentials	334
11.1.3	Equations Governing Lattice Vibrations	335
11.2	Vibrational Spectra of Simple Lattices	337
11.2.1	Vibrations of a Monatomic Linear Chain	337
11.2.2	Vibrations of a Diatomic Chain	341
11.2.3	Vibrations of a Dimerized Chain	345
11.2.4	Vibrations of a Simple Cubic Lattice	349

11.3	The General Description of Lattice Vibrations . . . . .	354
11.3.1	The Dynamical Matrix and its Eigenvalues . . . . .	355
11.3.2	Normal Coordinates and Normal Modes . . . . .	357
11.3.3	Acoustic and Optical Vibrations . . . . .	360
11.4	Lattice Vibrations in the Long-Wavelength Limit . . . . .	363
11.4.1	Acoustic Vibrations as Elastic Waves . . . . .	363
11.4.2	Elastic Constants of Crystalline Materials . . . . .	367
11.4.3	Elastic Waves in Cubic Crystals . . . . .	371
11.4.4	Optical Vibrations in Ionic Crystals . . . . .	373
11.5	Localized Lattice Vibrations . . . . .	377
11.5.1	Vibrations in a Chain with an Impurity . . . . .	377
11.5.2	Impurities in a Three-Dimensional Lattice . . . . .	381
11.6	The Specific Heat of Classical Lattices . . . . .	383
<b>12</b>	<b>The Quantum Theory of Lattice Vibrations . . . . .</b>	<b>387</b>
12.1	Quantization of Lattice Vibrations . . . . .	387
12.1.1	The Einstein Model . . . . .	387
12.1.2	The Debye Model . . . . .	389
12.1.3	Quantization of the Hamiltonian . . . . .	390
12.1.4	The Quantum Mechanics of Harmonic Oscillators . . . . .	392
12.1.5	Creation and Annihilation Operators of Vibrational Modes . . . . .	394
12.1.6	Phonons as Elementary Excitations . . . . .	395
12.1.7	Acoustic Phonons as Goldstone Bosons . . . . .	397
12.1.8	Symmetries of the Vibrational Spectrum . . . . .	397
12.2	Density of Phonon States . . . . .	398
12.2.1	Definition of the Density of States . . . . .	399
12.2.2	The Density of States in One- and Two-Dimensional Systems . . . . .	402
12.2.3	Van Hove Singularities . . . . .	405
12.3	The Thermodynamics of Vibrating Lattices . . . . .	409
12.3.1	The Ground State of the Lattice and Melting . . . . .	410
12.3.2	The Specific Heat of the Phonon Gas . . . . .	413
12.3.3	The Equation of State of the Crystal . . . . .	418
12.4	Anharmonicity . . . . .	421
12.4.1	Higher-Order Expansion of the Potential . . . . .	421
12.4.2	Interaction Among the Phonons . . . . .	423
12.4.3	Thermal Expansion and Thermal Conductivity in Crystals . . . . .	425
<b>13</b>	<b>The Experimental Study of Phonons . . . . .</b>	<b>429</b>
13.1	General Considerations . . . . .	429
13.2	Optical Methods in the Study of Phonons . . . . .	431
13.2.1	Infrared Absorption . . . . .	431
13.2.2	Raman Scattering . . . . .	433

13.2.3	Brillouin Scattering . . . . .	436
13.3	Neutron Scattering on a Thermally Vibrating Crystal . . . . .	438
13.3.1	Coherent Scattering Cross Section . . . . .	439
13.3.2	Temperature Dependence of the Intensity of Bragg Peaks . . . . .	443
13.3.3	Inelastic Phonon Peaks . . . . .	444
13.3.4	The Finite Width of Phonon Peaks . . . . .	446
