<i>About the Authors</i>	v		
<i>Preface</i>	xxiii		
<i>Acknowledgments</i>	xxvii		
<i>Foreword</i>	xxix		
1 Introduction to Wastewater Treatment and Process Analysis	1		
1-1 Evolution of Wastewater Treatment	4		
<i>Treatment Objectives</i>	5		
<i>Current Health and Environmental Concerns</i>	5		
<i>Sustainability Considerations</i>	5		
1-2 Evolution of Regulations of Significance to Wastewater Engineering	6		
<i>Establishment of Environmental Protection Agency</i>	6		
<i>Important Federal Regulations</i>	6		
<i>Other Federal Regulations</i>	9		
<i>State and Regional Regulations</i>	9		
1-3 Characteristics of Wastewater	9		
<i>Sources of Wastewater</i>	9		
<i>Types of Collection Systems</i>	9		
<i>Wastewater Constituents</i>	10		
1-4 Classification of Wastewater Treatment Methods	10		
<i>Physical Unit Processes</i>	10		
<i>Chemical Unit Processes</i>	12		
<i>Biological Unit Processes</i>	12		
1-5 Application of Treatment Methods	12		
<i>Wastewater Processing</i>	12		
<i>Residuals Processing</i>	13		
<i>Typical Treatment Process Flow Diagrams</i>	13		
1-6 Status of Wastewater Treatment in the United States	17		
<i>Recent Survey Results</i>	18		
<i>Trends</i>	18		
1-7 Introduction to Process Analysis	19		
<i>Mass-Balance Analysis</i>	19		
<i>Application of the Mass-Balance Analysis</i>	21		
1-8 Reactors Used in Wastewater Treatment	22		
<i>Types of Reactors</i>	22		
<i>Hydraulic Characteristics of Reactors</i>	24		
<i>Application of Reactors</i>	25		
1-9 Modeling Ideal Flow in Reactors	26		
<i>Ideal Flow in Complete-Mix Reactor</i>	26		
<i>Ideal Plug-Flow Reactor</i>	27		
1-10 Introduction to Process Kinetics	29		
<i>Types of Reactions</i>	29		
<i>Rate of Reaction</i>	30		
<i>Specific Reaction Rate</i>	31		
<i>Effects of Temperature on Reaction Rate Coefficients</i>	31		
<i>Reaction Order</i>	33		
<i>Rate Expressions Used in Wastewater Treatment</i>	34		
<i>Analysis of Reaction Rate Coefficients</i>	39		
1-11 Introduction to Treatment Process Modeling	42		
<i>Batch Reactor with Reaction</i>	43		
<i>Complete-Mix Reactor with Reaction</i>	43		
<i>Complete-Mix Reactors in Series with Reaction</i>	44		
<i>Ideal Plug-Flow Reactor with Reaction</i>	47		
<i>Comparison of Complete-Mix and Plug-Flow Reactors with Reaction</i>	48		
<i>Plug-Flow Reactor with Axial Dispersion and Reaction</i>	50		
<i>Other Reactor Flow Regimes and Reactor Combinations</i>	51		
Problems and Discussion Topics	53		
2 Wastewater Characteristics	57		
2-1 Wastewater Characterization	60		
<i>Wastewater Properties and Constituents</i>	60		
<i>Constituents of Concern in Wastewater Treatment</i>	60		
2-2 Sampling and Analytical Procedures	60		
<i>Sampling</i>	63		
<i>Methods of Analysis</i>	65		
<i>Units of Expression for Physical and Chemical Parameters</i>	66		
<i>Useful Chemical Relationships</i>	66		

- 2-3** Physical Properties 73
Sources of Physical Properties 73
Solids 73
Particle Size and Particle Size Measurement 76
Particle Size Distribution 80
Nanoparticles and Nanocomposites 83
Turbidity 83
Relationship Between Turbidity and TSS 85
Color 85
Absorption/Transmittance 85
Temperature 87
Thermal Energy Content of Wastewater 89
Conductivity 89
Density, Specific Gravity, and Specific Weight 89
- 2-4** Inorganic Nonmetallic Constituents 90
Sources of Inorganic Nonmetallic Constituents 90
pH 90
Chlorides 91
Alkalinity 92
Nitrogen 92
Phosphorus 96
Sulfur 97
Gases 98
Odors 103
- 2-5** Metallic Constituents 111
Sources of Metallic Constituents 112
Importance of Metals 113
Sampling and Methods of Analysis 114
Typical Effluent Discharge Limits for Metals 114
- 2-6** Aggregate Organic Constituents 114
Sources of Aggregate Organic Constituents 114
Measurement of Organic Content 114
Biochemical Oxygen Demand (BOD) 115
Total and Soluble Chemical Oxygen Demand (COD and SCOD) 123
Total and Dissolved Organic Carbon (TOC and DOTC) 123
UV-Absorbing Organic Constituents 124
Theoretical Oxygen Demand (ThOD) 125
Interrelationships between BOD, COD, and TOC 125
Oil and Grease 127
Surfactants 128
Chemical Energy in Wastewater and Biosolids 129
- 2-7** Individual Organic Compounds 131
Sources of Individual Organic Compounds 132
Priority Pollutants 132
Volatile Organic Compounds (VOCs) 132
Disinfection Byproducts 132
Pesticides and Agricultural Chemicals 133
- Unregulated Trace Organic Compounds* 133
Analysis of Individual Organic Compounds 133
- 2-8** Radionuclides in Wastewater 136
Sources of Radionuclide 137
Units of Expression 137
Description of Isotopes Found in Wastewater and Sludge 137
Treatment Technologies for the Removal of Radionuclides 137
- 2-9** Biological Constituents 139
Sources of Microorganisms in Wastewater 140
Enumeration and Identification of Microorganisms 144
Pathogenic Organisms and Prions 151
Evolving Pathogenic Microorganisms 161
- 2-10** Toxicity 161
Sources of Toxicity 161
Evolution and Application of Toxicity Testing 162
Toxicity Testing 163
Analysis of Toxicity Test Results 165
Application of Toxicity Test Results 167
Identification of Toxicity Components 169
Problems and Discussion Topics 171
- 3 Wastewater Flowrates and Constituent Loadings** 183
- 3-1** Wastewater Sources and Flowrates 185
Municipal Uses of Water 185
Domestic Wastewater Sources and Flowrates 186
Strategies for Reducing Interior Water Use and Wastewater Flowrates 189
Water Use in Other Parts of the World 194
Sources and Rates of Industrial (Nondomestic) Wastewater Flows 194
Variations in Wastewater Flowrates 195
Long-Term Multiyear Variations Due to Conservation 198
Impact of Water Conservation on Future Planning 200
- 3-2** Impact of Collection System on Wastewater Flowrates 200
Infiltration/Inflow 200
Inflow into Collection Systems 202
Exfiltration from Collection Systems 204
Combined Collection System Flowrates 205
Direct Measurement of Combined Sewer Flowrates and Wastewater Characteristics 207
Calculation of Combined Sewer Flowrates 207

- 3-3** Analysis of Wastewater Flowrate Data 208
Statistical Analysis of Flowrate Data 208
Developing Design Parameters from Flowrate Data 211
Observed Variability in Influent Flowrates 212
- 3-4** Analysis of Wastewater Constituents 214
Wastewater Constituents Discharged By Individuals 214
Constituent Concentrations Based on Individual Mass Discharges 218
Mineral Increase Resulting from Water Use 218
Composition of Wastewater in Collection Systems 219
Variations in Constituent Concentrations 219
Statistical Analysis of Constituent Concentrations 225
Observed Variability in Influent Constituent Concentrations 225
- 3-5** Analysis of Constituent Mass Loading Data 226
Simple Average 226
Flow-Weighted Average 226
Mass Loadings 229
Effect of Mass Loading Variability on Treatment Plant Performance 231
- 3-6** Selection of Design Flowrates and Mass Loadings 232
Design Flowrates 234
Design Mass Loadings 240
- 3-7** Flow and Constituent Load Equalization 241
Description/Application of Flow Equalization 242
The Benefits of Flow Equalization 243
Design Considerations 243
Equalization of Constituent Mass Loading Rates 253
Equalization of Sludge and Biosolids Processing Return Flows 253
Problems and Discussion Topics 254
- 4 Wastewater Treatment Process Selection, Design, and Implementation** 263
- 4-1** Planning for New and Upgrading Existing Wastewater Treatment Plants 265
Need to Upgrade Existing Wastewater Treatment Plants 265
Planning for New Wastewater Treatment Plants 266
Treatment Process Design Considerations 266
- Owner Needs* 270
Environmental Considerations 270
Compatibility with Existing Facilities 271
Energy and Resource Requirements 271
Cost Considerations 272
Other Design Considerations 273
- 4-2** Considerations in Process Selection 274
Important Factors in Process Selection 274
Process Selection Based on Reaction Kinetics 276
Process Selection Based on Mass Transfer 277
Process Design Based on Loading Criteria 277
Bench-Scale Tests and Test-Bed Pilot-Scale Studies 277
Wastewater Discharge Permit Requirements 278
- 4-3** Treatment Process Reliability and Selection of Design Values 279
Variability in Wastewater Treatment 280
Selection of Process Design Parameters to Meet Discharge Permit Limits 286
Performance of Combined Processes 289
- 4-4** Elements of Process Design 291
Design Period 291
Treatment Process Flow Diagrams 291
Process Design Criteria 291
Preliminary Sizing 292
Solids Balance 293
Plant Layout 294
Plant Hydraulics 295
Energy Management 296
- 4-5** Implementation of Wastewater Management Programs 297
Facilities Planning 297
Design 297
Value Engineering 298
Construction 298
Facilities Startup and Operation 299
- 4-6** Financing 299
Long-Term Municipal Debt Financing 299
Non-Debt Financing 300
Leasing 300
Privatization 300
Problems and Discussion Topics 300
- 5 Physical Unit Processes** 305
- 5-1** Screening 310
Classification of Screens 310
Screenings Characteristics and Quantities 311
Coarse Screens (Bar Racks) 312

- Fine Screens* 318
Microscreens 323
Screenings Handling, Processing, and Disposal 324
- 5-2** Coarse Solids Reduction 325
Comminutors 325
Macerators 326
Grinders 327
Design Considerations 327
- 5-3** Mixing and Flocculation 327
Continuous Rapid Mixing in Wastewater Treatment 328
Continuous Mixing in Wastewater Treatment 329
Energy Dissipation in Mixing and Flocculation 330
Time Scale in Mixing 332
Types of Mixers Used for Rapid Mixing in Wastewater Treatment 332
Types of Mixers Used for Maintaining Solids in Suspension in Wastewater Treatment and Chemical Mixing 335
Types of Mixers Used for Flocculation in Wastewater Treatment 338
Types of Mixers Used for Continuous Mixing in Wastewater Treatment 341
New Developments in Mixing Technology 344
- 5-4** Gravity Separation Theory 344
Description 345
Particle Settling Theory 346
Discrete Particle Settling 350
Flocculent Particle Settling 354
Inclined Plate and Tube Settling 356
Hindered (Zone) Settling 360
Compression Settling 364
Gravity Separation in an Accelerated Flow Field 364
- 5-5** Grit Removal 365
Wastewater Grit Characteristics 366
Grit Separators for Wastewater 370
Grit Separators for Combined Wastewater and Stormwater 379
Grit Washing 380
Grit Drying 382
Disposal of Grit 382
Solids (Sludge) Degritting 382
- 5-6** Primary Sedimentation 382
Description 383
Sedimentation Tank Performance 391
Design Considerations 393
- Characteristics and Quantities of Solids (Sludge) and Scum* 397
- 5-7** High-Rate Clarification 398
Enhanced Particle Flocculation 398
Analysis of Ballasted Particle Flocculation and Settling 399
Process Application 401
- 5-8** Flotation 403
Description 404
Design Considerations for Dissolved-Air Flotation Systems 406
- 5-9** New Approaches for Primary Treatment 408
Microscreening of Raw Wastewater 409
Charged Bubble Flotation 409
Primary Effluent Filtration 410
- 5-10** Gas Liquid Mass Transfer 411
Historical Development of Gas Transfer Theories 411
The Two-Film Theory of Gas Transfer 412
Absorption of Gases Under Turbulent Conditions 415
Absorption of Gases Under Quiescent Conditions 417
Desorption (Removal) of Gases 418
- 5-11** Aeration Systems 419
Oxygen Transfer 419
Evaluation of Alpha (α) Correction Factor 421
Types of Aeration Systems 424
Diffused-Air Aeration 424
Mechanical Aerators 436
Energy Requirement for Mixing in Aeration Systems 439
Generation and Dissolution of High-Purity Oxygen 440
Postaeration 443
Problems and Discussion Topics 448
- 6 Chemical Unit Processes** 455
- 6-1** Role of Chemical Unit Processes in Wastewater Treatment 458
Applications of Chemical Unit Processes 458
Considerations in the Use of Chemical Unit Processes 459
- 6-2** Fundamentals of Chemical Coagulation 460
Basic Definitions 461
Nature of Particles in Wastewater 461
Development and Measurement of Surface Charge 462

- Particle-Particle Interactions* 463
Particle Destabilization and Aggregation with Polyelectrolytes 466
Particle Destabilization and Removal with Hydrolyzed Metal Ions 468
- 6-3** Chemical Precipitation for Improved Plant Performance 473
Chemical Reactions in Wastewater Precipitation Applications 474
Chemically Enhanced Primary Treatment (CEPT) 477
Independent Physical-Chemical Treatment 478
Estimation of Sludge Quantities from Chemical Precipitation 479
- 6-4** Chemical Phosphorus Removal 481
Chemicals Used for Phosphorus Removal 481
Phosphorus Removal from the Liquid Stream with Metal Salts 487
Phosphorus Removal from the Liquid Stream with Calcium 489
Strategies for Chemical Phosphorus Removal 491
- 6-5** Chemical Formation of Struvite for Ammonium and Phosphorus Removal 492
Chemistry of Struvite Formation 493
Control and/or Mitigation Measures for the Formation of Struvite 496
Enhanced Struvite Formation for Nutrient Removal 496
- 6-6** Chemical Precipitation for Removal of Heavy Metals and Dissolved Substances 498
Precipitation Reactions 498
Co-precipitation with Phosphorus 500
- 6-7** Conventional Chemical Oxidation 501
Applications for Conventional Chemical Oxidation 501
Oxidants Used in Chemical Oxidation Processes 501
Fundamentals of Chemical Oxidation 503
Chemical Oxidation of Organic Constituents 508
Chemical Oxidation of Ammonium 508
Chemical Oxidation Process Limitations 510
- 6-8** Advanced Oxidation 510
Applications for Advanced Oxidation 510
Processes for Advanced Oxidation 513
Basic Considerations for Advanced Oxidation Processes 517
Advanced Oxidation Process Limitations 520
- 6-9** Photolysis 521
Applications for Photolysis 521

- Photolysis Processes* 522
Basic Considerations for Photolysis Processes 522
Photolysis Process Limitations 528
- 6-10** Chemical Neutralization, Scale Control, and Stabilization 529
pH Adjustment 529
Analysis of Scaling Potential 530
Scale Control 535
Stabilization 536
- 6-11** Chemical Storage, Feeding, Piping, and Control Systems 536
Chemical Storage and Handling 536
Dry Chemical Feed Systems 538
Liquid Chemical Feed Systems 542
Gas Chemical Feed Systems 542
Initial Chemical Mixing 543
Problems and Discussion Topics 544
- 7 Fundamentals of Biological Treatment** 551
- 7-1** Overview of Biological Wastewater Treatment 555
Objectives of Biological Treatment 555
Role of Microorganisms in Wastewater Treatment 555
Types of Biological Processes for Wastewater Treatment 556
- 7-2** Composition and Classification of Microorganisms 561
Cell Components 562
Cell Composition 564
Environmental Factors 564
Microorganism Identification and Classification 565
Use of Molecular Tools 568
- 7-3** Introduction to Microbial Metabolism 571
Carbon and Energy Sources for Microbial Growth 571
Nutrient and Growth Factor Requirements 573
- 7-4** Bacterial Growth, Energetics, and Decay 573
Bacterial Reproduction 574
Bacterial Growth Patterns in a Batch Reactor 574
Bacterial Growth and Biomass Yield 575
Measuring Biomass Growth 575
Estimating Biomass Yield and Oxygen Requirements from Stoichiometry 576
Estimating Biomass Yield from Bioenergetics 579
Stoichiometry of Biological Reactions 586

- Biomass Synthesis Yields for Different Growth Conditions* 587
- Biomass Decay* 587
- Observed versus Synthesis Yield* 588
- 7-5** *Microbial Growth Kinetics* 588
- Microbial Growth Kinetics Terminology* 589
- Rate of Utilization of Soluble Substrates* 589
- Other Rate Expressions for Soluble Substrate Utilization* 591
- Rate of Soluble Substrate Production from Biodegradable Particulate Organic Matter* 591
- Net Biomass Growth Rate* 592
- Kinetic Coefficients for Substrate Utilization and Biomass Growth* 593
- Rate of Oxygen Uptake* 593
- Effects of Temperature* 594
- Total Volatile Suspended Solids and Active Biomass* 594
- Net Biomass Yield and Observed Yield* 595
- 7-6** *Modeling Suspended Growth Treatment Processes* 597
- Description of Suspended Growth Treatment Processes* 597
- Solids Retention Time* 597
- Biomass Mass Balance* 598
- Substrate Mass Balance* 600
- Mixed Liquor Solids Concentration and Solids Production* 600
- The Observed Yield* 603
- Oxygen Requirements* 603
- Design and Operating Parameters* 606
- Process Performance and Stability* 607
- Modeling Plug-Flow Reactors* 609
- 7-7** *Substrate Removal in Attached Growth Treatment Process* 610
- Biofilm Characteristics* 611
- Biomass Characterization* 611
- Mechanistic Models* 612
- Substrate Flux in Biofilms* 612
- Substrate Mass Balance for Biofilm* 613
- Substrate Flux Limitations* 613
- 7-8** *Aerobic Oxidation* 615
- Process Description* 615
- Microbiology* 615
- Process Operation Issues* 616
- Stoichiometry of Aerobic Biological Oxidation* 617
- Growth Kinetics* 617
- Environmental Factors* 618

- 7-9** *Biological Oxidation of Inorganic Nitrogen* 618
- Process Description* 619
- Microbiology* 619
- Stoichiometry of Biological Nitrification* 622
- Nitification Kinetics* 624
- AOB Kinetics* 626
- NOB Kinetics* 627
- Environmental Factors* 628
- 7-10** *Denitrification* 631
- Process Description* 632
- Microbiology* 633
- Stoichiometry of Biological Denitrification and Denitritation* 634
- Organic Substrate Requirements for Denitrification and Denitritation* 635
- Denitrification Kinetics* 637
- Environmental Factors* 640
- 7-11** *Anaerobic Ammonium Oxidation* 640
- Process Description* 640
- Microbiology* 641
- Anammox Stoichiometry* 641
- Growth Kinetics* 644
- Environmental Factors* 645
- 7-12** *Greenhouse Gas from Biological Nitrogen Transformations* 645
- Source of Nitrous Oxide Emissions* 645
- Nitrous Oxide Production Pathways* 646
- 7-13** *Enhanced Biological Phosphorus Removal* 648
- Process Description* 648
- Processes Occurring in the Anaerobic Zone* 650
- Processes Occurring in a Downstream Aerobic or Anoxic Zone* 650
- Microbiology* 651
- Other Process Considerations for EBPR* 652
- Stoichiometry of Enhanced Biological Phosphorus Removal* 653
- Growth Kinetics* 655
- Environmental Factors* 655
- 7-14** *Anaerobic Fermentation and Oxidation* 655
- Process Description* 656
- Microbiology* 657
- Stoichiometry of Anaerobic Fermentation and Oxidation* 659
- Process Kinetics* 660
- Environmental Factors* 663
- 7-15** *Biological Removal of Toxic and Recalcitrant Organic Compounds* 663
- Development of Biological Treatment Methods* 664

- Aerobic Biodegradation* 665
- Abiotic Losses* 666
- Modeling Biotic and Abiotic Losses* 669
- 7-16** *Biological Removal of Trace Organic Compounds* 671
- Removal of Trace Organic Compounds* 672
- Steady-State Fate Model* 672
- 7-17** *Biological Removal of Heavy Metals* 674
- Problems and Discussion Topics** 674
- 8 Suspended Growth Biological Treatment Processes** 697
- 8-1** *Introduction to the Activated-Sludge Process* 700
- Historical Development of Activated Sludge Process* 701
- Basic Process Description* 701
- Evolution of the Conventional Activated-Sludge Process* 702
- Nutrient Removal Processes* 706
- 8-2** *Wastewater Characterization* 707
- Key Wastewater Constituents for Process Design* 707
- Measurement Methods for Wastewater Characterization* 712
- Recycle Flows and Loadings* 716
- 8-3** *Fundamentals of Process Selection, Design, and Control* 717
- Overall Considerations in Treatment Process Implementation* 717
- Important Factors in Process Selection and Design* 717
- Process Control* 726
- Operational Problems in Activated Sludge Systems with Secondary Clarifiers* 732
- Operational Problems with MBR Systems* 738
- 8-4** *Selector Types and Design Consideration* 738
- Selector Types and Design Considerations* 739
- Poor Settling Even with Use of Selector* 741
- 8-5** *Activated Sludge Process Design Considerations* 742
- Steady-State Design Approach* 742
- Use of Simulation Model* 744
- Model Matrix Format, Components, and Reactions* 747
- Other Simulation Model Applications* 751
- 8-6** *Processes for Bod Removal and Nitrification* 752
- Overview of BOD Removal and Nitrification Processes* 752

- General Process Design Considerations* 754
- Complete-Mix Activated-Sludge Process Design* 754
- Sequencing Batch Reactor Process Design* 771
- Staged Activated-Sludge Process Design* 782
- Alternative Processes for BOD Removal and Nitrification* 786
- 8-7** *Processes for Biological Nitrogen Removal* 795
- Process Development* 796
- Overview of Types of Biological Nitrogen-Removal Processes* 797
- General Process Design Considerations* 802
- Preatoxic Denitrification Processes* 804
- Postanoxic Denitrification Processes* 831
- Low DO and Cyclic Nitrification/Denitrification Processes* 833
- Alternative Process Configurations for Biological Nitrogen Removal* 838
- Denitrification with External Carbon Addition* 848
- Process Control and Performance* 860
- 8-8** *Processes for Enhanced Biological Phosphorus Removal* 861
- Process Development* 861
- Overview of Enhanced Biological Phosphorus Removal Processes* 862
- General Process Design Considerations* 864
- Operational Factors That Affect Enhanced Biological Phosphorus Removal* 878
- Enhanced Biological Phosphorus Removal Process Design* 880
- Provision for Chemical Addition* 883
- Process Control and Performance Optimization* 884
- 8-9** *Aeration Tank Design for Activated-Sludge Processes* 885
- Aeration System* 885
- Aeration Tanks and Appurtenances* 886
- 8-10** *Analysis of Liquid-Solids Separation for Activated-Sludge Processes with Clarifiers* 889
- Solids Separation by Secondary Clarifiers* 889
- Assessing Sludge Thickening Characteristics* 891
- Clarifier Design Based on Solids Flux Analysis* 893
- Clarifier Design Based on State Point Analysis* 900
- 8-11** *Design Considerations for Secondary Clarifiers* 906
- Types of Sedimentation Tank* 906
- Sidewater Depth* 910

- Flow Distribution 910
 Tank Inlet Design 910
 Weir Placement and Loading 912
 Scum Removal and Management 912
- 8-12** Solids Separation for Membrane Bioreactors 913
 Design Parameter 913
 Membrane Properties 914
 Membrane Design and Operating Characteristics 917
 Membrane Usage 917
 Membrane Fouling Issues 917
 Problems and Discussion Topics 919
- 9 Attached Growth and Combined Biological Treatment Processes** 941
- 9-1** Introduction to Attached Growth Processes 943
 Types of Attached Growth Processes 943
 Mass Transfer Limitations in Attached Growth Processes 947
- 9-2** Nonsubmerged Attached Growth Processes 947
 General Process Description 947
 Trickling Filter Classification and Applications 950
 Advantages and Disadvantages of Trickling Filters 953
 Physical Facilities for Trickling Filters 954
 Design Considerations for Physical Facilities 957
 Process Design Considerations for BOD Removal 968
 Process Analysis for BOD Removal 972
 Process Analysis for Nitrification 978
- 9-3** Sequential Combined Trickling Filter and Suspended Solids Processes 987
 Process Development 987
 Process Applications 987
 Trickling Filter/Solids Contact Process 988
 Trickling Filter/Activated Sludge Process 990
 Series Trickling-Filter Activated-Sludge Process 997
- 9-4** Integrated Fixed-Film Activated Sludge Process 997
 Process Development 998
 Process Applications 1000
 IFAS Process Advantages and Disadvantages 1002
- Design of Physical Facilities 1003
 IFAS Process Design Analysis 1005
 BOD and Nitrification Design Approach 1008
- 9-5** Moving Bed Biofilm Reactor (MBBR) 1015
 Background 1015
 MBBR Process Applications 1016
 MBBR Process Advantages and Disadvantages 1016
 Design of Physical Facilities 1019
 MBBR Process Design Analysis 1020
 BOD Removal and Nitrification Design 1021
- 9-6** Submerged Aerobic Attached Growth Processes 1026
 Process Development 1026
 Process Applications 1027
 Process Advantages and Disadvantages 1027
 Design of Physical Facilities 1029
 BAF Process Design Analysis 1031
 FBBR Process Design Analysis 1034
- 9-7** Attached Growth Denitrification Processes 1034
 Process Development 1034
 Description and Application of Attached Growth Denitrification Processes 1035
 Process Design Analysis of Postanoxic Attached Growth Denitrification 1037
 Operational Considerations for Postanoxic Attached Growth Denitrification 1041
- 9-8** Emerging Biofilm Processes 1045
 Membrane Biofilm Reactors 1045
 Biofilm Airlift Reactors 1046
 Aerobic Granules Reactor 1046
 Problems and Discussion Topics 1046
- 10 Anaerobic Suspended and Attached Growth Biological Treatment Processes** 1059
- 10-1** The Rationale for Anaerobic Treatment 1061
 Advantages of Anaerobic Treatment Processes 1061
 Disadvantages of Anaerobic Treatment Processes 1062
 Summary Assessment 1063
- 10-2** Development of Anaerobic Technologies 1063
 Historical Developments in Liquefaction 1063
 Treatment of Wastewater Sludges 1065
 Treatment of High Strength Wastes 1066
 Future Developments 1067
- 10-3** Available Anaerobic Technologies 1067
 Types of Anaerobic Technologies 1067
 Application of Anaerobic Technologies 1071
- 10-4** Fundamental Considerations in the Application of Anaerobic Treatment Processes 1075
 Characteristics of the Wastewater 1075
 Pretreatment of Wastewater 1080
 Expected Gas Production 1083
 Energy Production Potential 1085
 Sulfide Production 1088
 Ammonia Toxicity 1090
- 10-5** Design Considerations for Implementation of Anaerobic Treatment Processes 1090
 Treatment Efficiency Needed 1091
 General Process Design Parameters 1091
 Process Implementation Issues 1093
- 10-6** Process Design Examples 1095
 Upflow Anaerobic Sludge Blanket Process 1095
 Anaerobic Contact Process 1103
 Use of Simulation Models 1107
- 10-7** Codigestion of Organic Wastes with Municipal Sludge 1108
 Problems and Discussion Topics 1109
- 11 Separation Processes for Removal of Residual Constituents** 1117
- 11-1** Need for Additional Wastewater Treatment 1120
- 11-2** Overview of Technologies Used for Removal of Residual Particulate and Dissolved Constituents 1120
 Separation Processes Based on Mass Transfer 1120
 Transformation Based on Chemical and Biological Processes 1122
 Application of Unit Processes for Removal of Residual Constituents 1123
- 11-3** Unit Processes for the Removal of Residual Particulate and Dissolved Constituents 1123
 Typical Process Flow Diagrams 1124
 Process Performance Expectations 1125
- 11-4** Introduction to Depth Filtration 1129
 Description of the Filtration Process 1129
 Filter Hydraulics 1134
 Modeling the Filtration Process 1142
- 11-5** Depth Filtration: Selection and Design Considerations 1144
- Available Filtration Technologies 1144
 Performance of Different Types of Depth Filters 1146
 Considerations Related to Design and Operation of Treatment Facilities 1156
 Selection of Filtration Technology 1158
 Design Considerations for Granular Medium Filters 1161
- 11-6** Surface Filtration 1171
 Available Filtration Technologies 1172
 Description of the Surface Filtration Process 1175
 Performance of Surface Filters 1178
 Design Considerations 1180
 Pilot Plant Studies 1180
- 11-7** Membrane Filtration Processes 1181
 Membrane Process Terminology 1181
 Membrane Process Classification 1182
 Membrane Containment Vessels 1185
 Operational Modes for Pressurized Configurations 1189
 Process Analysis for MF and UF Membranes 1190
 Operating Strategies for MF and UF Membranes 1192
 Process Analysis for Reverse Osmosis 1193
 Membrane Fouling 1198
 Control of Membrane Fouling 1201
 Application and Performance of Membranes 1204
 Forward Osmosis: An Emerging Membrane Technology 1212
 Pilot-Plant Studies for Membrane Applications 1214
 Management of Retentate 1215
- 11-8** Electrodialysis 1217
 Description of the Electrodialysis Process 1217
 Electrodialysis Reversal 1218
 Power Consumption 1220
 Operating Considerations 1222
 Electrodialysis Versus Reverse Osmosis 1223
- 11-9** Adsorption 1224
 Applications for Adsorption 1224
 Types of Adsorbents 1224
 Fundamentals of Adsorption Processes 1227
 Development of Adsorption Isotherms 1227
 Adsorption of Mixtures 1232
 Adsorption Capacity 1232
 Small Scale Column Tests 1240
 Analysis of Powdered Activated Carbon Contactor 1243
