About the authors	xi
Preface	xv
1 Issues on current radar systems	1
<i>Fabrizio Berizzi, Amerigo Capria, Elisa Giusti and Anna Lisa Saverino</i>	
Acronyms	1
1.1 Chapter organization and key points	2
1.2 Introduction to radar systems	3
1.2.1 Radar design	4
1.2.2 Radar system architecture	7
1.3 Radar functionalities and applications	9
1.3.1 Definition of radar functionalities	10
1.3.2 Radar classes and functionality	14
1.3.3 Radar applications	16
1.3.4 Radar applications and functionalities	16
1.3.5 Advanced concepts for modern radars	17
1.3.6 From a single radar unit to radar network topology	19
1.4 Issue in current radar networks and future trends	21
1.5 Summary	22
References	22
2 Electronic warfare systems and their current issues	27
<i>Maurizio Gemma, Antonio Tafuto, Marco Bartocci and Daniel Onori</i>	
2.1 Chapter organization and key points	27
2.2 Electronic warfare scenario	27
2.3 ES receivers	29
2.3.1 ES receivers for radar emitters	29
2.3.2 ES receivers for communications emitters	30
2.3.3 Basic ES sensors architectures	31
2.3.4 ES receivers implementations and requirements	36
2.3.5 Digital receiver	39
2.4 EA architectures	41
2.5 EP architectures	42
2.5.1 Frequency and pulse repetition interval agility	44
2.5.2 Ultralow sidelobes	44

2.5.3 Multiple SLCs	44		
2.5.4 Sidelobe blanker	44		
2.6 Future developments	45		
2.7 Conclusions	47		
References	48		
3 Microwave photonic concepts and functionalities	49		
<i>Massimiliano Dispenza, Luigi Pierno, Paolo Ghelfi and Antonella Bogoni</i>			
3.1 Chapter organization and key points	49		
3.2 Microwave photonic solutions for future radar and EW systems	50		
3.3 Photonics-based RF generation and up-conversion	52		
3.3.1 Generation of phase-locked lasers through RF modulation	54		
3.3.2 Laser phase locking through injection locking	56		
3.3.3 Opto-electronic oscillators	58		
3.3.4 Mode locked lasers	60		
3.4 Photonics-based RF detection	62		
3.4.1 RF detection by photonic down-conversion	64		
3.4.2 RF detection by optical sampling	64		
3.4.3 Other photonics-based RF receiving techniques	65		
3.5 Photonics RF signal transport and distribution	65		
3.6 Optical filtering for microwave signals	68		
3.7 Optical beamforming of RF signals	71		
3.8 On-chip implementation: state of the art, future trends, and perspective	75		
3.9 Summary	75		
References	76		
4 Photonics-based radars	83		
<i>Filippo Scotti, Paolo Ghelfi, and Antonella Bogoni</i>			
4.1 Chapter organization and key points	83		
4.2 Photonics-based transceivers	83		
4.3 A general photonics-based transceiver for software-defined radars	84		
4.4 A specific photonics-based transceiver for FMCW radar	86		
4.5 Photonics-based radars and field trials	86		
4.6 Multiband photonics-based transceiver and radar	90		
4.7 Dual-band signal processing	93		
4.8 Case study: naval scenario field trial	95		
4.9 Case study: aerial scenario field trial	101		
4.10 Case study: environmental monitoring field trial	103		
4.11 Summary	109		
References	109		
5 Radar networks	111		
<i>Carlo Noviello, Paolo Braca and Salvatore Maresca</i>			
5.1 Chapter organization and key points	111		
5.2 Multistatic radars	112		
5.2.1 Concept	112		
5.2.2 Benefits	113		
5.2.3 Applications	114		
5.2.4 Network radar: system description	115		
5.3 Signal model	118		
5.3.1 Centralized radar network processing	120		
5.3.2 Decentralized radar network processing	121		
5.4 Radar network synchronization issues	122		
5.5 Data fusion methods	125		
5.5.1 Data fusion architectures in multistatic radar networks	126		
5.5.2 Information fusion approaches in multistatic architectures	129		
5.5.3 Achievements in radar network fusion	130		
5.6 Multitarget tracking	131		
5.6.1 Description of the MTT problem for radar network	133		
5.7 Radar networks for maritime surveillance: a recent experimentation	134		
5.7.1 Experimental setup	134		
5.7.2 Performance assessment	136		
5.7.3 Experimental analysis	137		
5.8 Summary	142		
References	144		
6 Photonics in radar networks	151		
<i>Sergio Pinna, Salvatore Maresca, Francesco Laghezza, Leonardo Lembo and Paolo Ghelfi</i>			
6.1 Chapter organization and key points	151		
6.2 Coherence and synchronization in radar networks	151		
6.2.1 Classification of radar networks	152		
6.2.2 Synchronization in radar networks	156		
6.3 Photonics for synchronizing distributed radar networks	159		
6.3.1 Microwave frequency transfer	159		
6.3.2 Optical reference generation and distribution	161		
6.4 Photonics-based centralized radar network: an experimental approach	161		
6.5 MIMO processing in photonics-based centralized radar networks	163		
6.5.1 A simulator for photonics-based MIMO radars	163		
6.5.2 Simulation results: the potentials of the coherent MIMO processing	165		
6.6 Conclusions	169		
References	170		

7 Photonics in electronic warfare systems	175
<i>Daniel Onori and Paolo Ghelfi</i>	
7.1 Chapter organization and key points	175
7.2 Photonics potentials in EW systems	175
7.2.1 Electronic protection	176
7.2.2 Electronic support	176
7.2.3 Electronic attack	176
7.3 Microwave photonic links	176
7.3.1 MPLs based on intensity modulation and direct detection	177
7.3.2 MPL linearization by predistortion	179
7.3.3 Differential transmission and detection	180
7.3.4 Other methods for extending the linearity of IM-DD PMLs	180
7.3.5 MPLs based on phase modulation and coherent detection	181
7.3.6 MPLs for direction finding	182
7.4 Instantaneous frequency measure systems	182
7.5 Scanning receivers	183
7.6 A photonics-based coherent scanning receiver	184
7.6.1 Architecture of the photonics-based coherent scanning receiver	187
7.6.2 Features and figures of merits	188
7.7 Case study: a field trial in a tactical naval scenario	192
7.8 Summary	194
References	194
8 Past and future of radars and EW systems: an industrial perspective	199
<i>Alfonso Farina</i>	
8.1 Chapter organization and key points	199
8.2 Operational needs	200
8.2.1 Radar	200
8.2.2 EW	201
8.3 Photonics in surveillance phased array radar	202
8.3.1 A review of beam-forming network technology and architectures	202
8.3.2 Past	206
8.3.3 Present	206
8.3.4 Near future	206
8.4 Photonics/optronics in SAR	207
8.4.1 SAR, a short reminder	207
8.4.2 Past	207
8.4.3 Present and future	207
8.5 The role of photonics/optronics in adaptive digital beam forming (ADBF) for radar	209
8.5.1 Mapping of an ADBF algorithm on optical computer	210

8.6 The role of photonics/optronics in ESM	214
8.7 Coexistence of radar and EW: the role of optronics	214
8.8 Quantum sensing and quantum radar (QR): Sci-Fi or a potential reality?	214
8.8.1 Basic principle of operation of QR	215
8.8.2 Basic principle of operation of QI	216
8.9 Summary and way ahead	217
References	218
Further reading	220

9 Conclusions	223
<i>Antonella Bogoni, Paolo Ghelfi, and Francesco Laghezza</i>	

Index	227
