

Contents

Preface		v
Chapter 1.	Theory of Relativity	1
Chapter 2.	The Configuration of the Atom: Rutherford's Model	7
Chapter 3.	Quantum States of Atoms: The Bohr Model	13
Chapter 4.	Fine Structure in Atomic Spectra: Electron Spin	21
Chapter 5.	Atoms Containing Many Electrons: The Pauli Exclusion Principle	29
Chapter 6.	X-Rays	35
Chapter 7.	Introductory Quantum Mechanics I: Concepts	43
Chapter 8.	Introductory Quantum Mechanics II: The Schrödinger Equation	49
Chapter 9.	Basic Concepts of Nuclear Physics	57
Chapter 10.	Radioactive Decay	63
Chapter 11.	Nuclear Forces and Nuclear Models	71
Chapter 12.	Nuclear Interactions and Reactions	77
Chapter 13.	Hyperfine Interaction	85
Chapter 14.	High-Energy Physics	89
