Chapter 1. Introduction	1
Chapter 2. Basic notions of representation theory	5
§2.1. What is representation theory?	5
§2.2. Algebras	8
§2.3. Representations	9
§2.4. Ideals	15
§2.5. Quotients	15
§2.6. Algebras defined by generators and relations	16
§2.7. Examples of algebras	17
§2.8. Quivers	19
§2.9. Lie algebras	22
§2.10. Historical interlude: Sophus Lie's trials and transformations	26
§2.11. Tensor products	30
§2.12. The tensor algebra	35
§2.13. Hilbert's third problem	36
§2.14. Tensor products and duals of representations of Lie algebras	36
§2.15. Representations of $\mathfrak{sl}(2)$	37

	Contents
§2.16. Problems on Lie algebras	39
Chapter 3. General results of representation theory	41
§3.1. Subrepresentations in semisimple representations	41
§3.2. The density theorem	43
§3.3. Representations of direct sums of matrix algebras	44
§3.4. Filtrations	45
§3.5. Finite dimensional algebras	46
§3.6. Characters of representations	48
§3.7. The Jordan-Hölder theorem	50
§3.8. The Krull-Schmidt theorem	51
§3.9. Problems	53
§3.10. Representations of tensor products	56
Chapter 4. Representations of finite groups: Basic results	59
§4.1. Maschke's theorem	59
§4.2. Characters	61
§4.3. Examples	62
§4.4. Duals and tensor products of representations	65
§4.5. Orthogonality of characters	65
§4.6. Unitary representations. Another proof of Maschke's theorem for complex representations	68
§4.7. Orthogonality of matrix elements	70
§4.8. Character tables, examples	71
§4.9. Computing tensor product multiplicities using character tables	74
§4.10. Frobenius determinant	75
§4.11. Historical interlude: Georg Frobenius's "Principle of Horse Trade"	77
§4.12. Problems	81
§4.13. Historical interlude: William Rowan Hamilton's quaternion of geometry, algebra, metaphysics, and poetry	86

	Contents
Chapter 5. Representations of finite groups: Further results	91
§5.1. Frobenius-Schur indicator	91
§5.2. Algebraic numbers and algebraic integers	93
§5.3. Frobenius divisibility	96
§5.4. Burnside's theorem	98
§5.5. Historical interlude: William Burnside and intellectual harmony in mathematics	100
§5.6. Representations of products	104
§5.7. Virtual representations	105
§5.8. Induced representations	105
§5.9. The Frobenius formula for the character of an induced representation	106
§5.10. Frobenius reciprocity	107
§5.11. Examples	110
§5.12. Representations of S_n	110
§5.13. Proof of the classification theorem for representations of S_n	112
§5.14. Induced representations for S_n	114
§5.15. The Frobenius character formula	115
§5.16. Problems	118
§5.17. The hook length formula	118
§5.18. Schur-Weyl duality for $\mathfrak{gl}(V)$	119
§5.19. Schur-Weyl duality for $GL(V)$	122
§5.20. Historical interlude: Hermann Weyl at the intersection of limitation and freedom	122
§5.21. Schur polynomials	128
§5.22. The characters of L_λ	129
§5.23. Algebraic representations of $GL(V)$	130
§5.24. Problems	131
§5.25. Representations of $GL_2(\mathbb{F}_q)$	132
§5.26. Artin's theorem	141

	Contents
§5.27. Representations of semidirect products	142
Chapter 6. Quiver representations	145
§6.1. Problems	145
§6.2. Indecomposable representations of the quivers A_1, A_2, A_3	150
§6.3. Indecomposable representations of the quiver D_4	154
§6.4. Roots	160
§6.5. Gabriel's theorem	163
§6.6. Reflection functors	164
§6.7. Coxeter elements	169
§6.8. Proof of Gabriel's theorem	170
§6.9. Problems	173
Chapter 7. Introduction to categories	177
§7.1. The definition of a category	177
§7.2. Functors	179
§7.3. Morphisms of functors	181
§7.4. Equivalence of categories	182
§7.5. Representable functors	183
§7.6. Adjoint functors	184
§7.7. Abelian categories	186
§7.8. Complexes and cohomology	187
§7.9. Exact functors	190
§7.10. Historical interlude: Eilenberg, Mac Lane, and “general abstract nonsense”	192
Chapter 8. Homological algebra	201
§8.1. Projective and injective modules	201
§8.2. Tor and Ext functors	203
Chapter 9. Structure of finite dimensional algebras	209
§9.1. Lifting of idempotents	209
§9.2. Projective covers	210

§9.3. The Cartan matrix of a finite dimensional algebra	211
§9.4. Homological dimension	212
§9.5. Blocks	213
§9.6. Finite abelian categories	214
§9.7. Morita equivalence	215
References for historical interludes	217
Mathematical references	223
