

Contents

1	Smooth manifolds	1
1.1	Smooth manifolds	1
1.2	The inverse function theorem and implicit function theorem	3
1.3	Submanifolds of \mathbb{R}^m	4
1.4	Submanifolds of manifolds	7
1.5	More constructions of manifolds	8
1.6	More smooth manifolds: The Grassmannians	9
	Appendix 1.1 How to prove the inverse function and implicit function theorems	11
	Appendix 1.2 Partitions of unity	13
	Additional reading	13
2	Matrices and Lie groups	14
2.1	The general linear group	14
2.2	Lie groups	15
2.3	Examples of Lie groups	16
2.4	Some complex Lie groups	17
2.5	The groups $Sl(n; \mathbb{C})$, $U(n)$ and $SU(n)$	19
2.6	Notation with regards to matrices and differentials	21
	Appendix 2.1 The transition functions for the Grassmannians	22
	Additional reading	24
3	Introduction to vector bundles	25
3.1	The definition	25
3.2	The standard definition	27
3.3	The first examples of vector bundles	28
3.4	The tangent bundle	29

3.5	Tangent bundle examples	31
3.6	The cotangent bundle	33
3.7	Bundle homomorphisms	34
3.8	Sections of vector bundles	35
3.9	Sections of TM and T*M	36
	Additional reading	38
<hr/>		
4	Algebra of vector bundles	39
<hr/>		
4.1	Subbundles	39
4.2	Quotient bundles	40
4.3	The dual bundle	41
4.4	Bundles of homomorphisms	42
4.5	Tensor product bundles	43
4.6	The direct sum	43
4.7	Tensor powers	44
	Additional reading	46
<hr/>		
5	Maps and vector bundles	48
<hr/>		
5.1	The pull-back construction	48
5.2	Pull-backs and Grassmannians	49
5.3	Pull-back of differential forms and push-forward of vector fields	50
5.4	Invariant forms and vector fields on Lie groups	52
5.5	The exponential map on a matrix group	53
5.6	The exponential map and right/left invariance on $GL(n; \mathbb{C})$ and its subgroups	55
5.7	Immersion, submersion and transversality	57
	Additional reading	58
<hr/>		
6	Vector bundles with \mathbb{C}^n as fiber	59
<hr/>		
6.1	Definitions	59
6.2	Comparing definitions	60
6.3	Examples: The complexification	62
6.4	Complex bundles over surfaces in \mathbb{R}^3	63
6.5	The tangent bundle to a surface in \mathbb{R}^3	64
6.6	Bundles over 4-dimensional submanifolds in \mathbb{R}^5	64
6.7	Complex bundles over 4-dimensional manifolds	65
6.8	Complex Grassmannians	65

6.9	The exterior product construction	68
6.10	Algebraic operations	69
6.11	Pull-back	70
	Additional reading	71
<hr/>		
7	Metrics on vector bundles	72
<hr/>		
7.1	Metrics and transition functions for real vector bundles	73
7.2	Metrics and transition functions for complex vector bundles	75
7.3	Metrics, algebra and maps	75
7.4	Metrics on TM	77
	Additional reading	77
<hr/>		
8	Geodesics	78
<hr/>		
8.1	Riemannian metrics and distance	78
8.2	Length minimizing curves	79
8.3	The existence of geodesics	81
8.4	First examples	82
8.5	Geodesics on $SO(n)$	85
8.6	Geodesics on $U(n)$ and $SU(n)$	89
8.7	Geodesics and matrix groups	92
	Appendix 8.1 The proof of the vector field theorem	93
	Additional reading	94
<hr/>		
9	Properties of geodesics	96
<hr/>		
9.1	The maximal extension of a geodesic	96
9.2	The exponential map	96
9.3	Gaussian coordinates	98
9.4	The proof of the geodesic theorem	100
	Additional reading	103
<hr/>		
10	Principal bundles	104
<hr/>		
10.1	The definition	104
10.2	A cocycle definition	105
10.3	Principal bundles constructed from vector bundles	106
10.4	Quotients of Lie groups by subgroups	108

10.5	Examples of Lie group quotients	110
10.6	Cocycle construction examples	113
10.7	Pull-backs of principal bundles	116
10.8	Reducible principal bundles	118
10.9	Associated vector bundles	119
	Appendix 10.1 Proof of Proposition 10.1	121
	Additional reading	124

11 Covariant derivatives and connections 125

11.1	Covariant derivatives	125
11.2	The space of covariant derivatives	126
11.3	Another construction of covariant derivatives	127
11.4	Principal bundles and connections	128
11.5	Connections and covariant derivatives	134
11.6	Horizontal lifts	135
11.7	An application to the classification of principal G-bundles up to isomorphism	136
11.8	Connections, covariant derivatives and pull-back bundles	137
	Additional reading	138

12 Covariant derivatives, connections and curvature 139

12.1	Exterior derivative	139
12.2	Closed forms, exact forms, diffeomorphisms and De Rham cohomology	141
12.3	Lie derivative	143
12.4	Curvature and covariant derivatives	144
12.5	An example	146
12.6	Curvature and commutators	148
12.7	Connections and curvature	148
12.8	The horizontal subbundle revisited	150
	Additional reading	151

13 Flat connections and holonomy 152

13.1	Flat connections	152
13.2	Flat connections on bundles over the circle	153
13.3	Foliations	155
13.4	Automorphisms of a principal bundle	156
13.5	The fundamental group	157

13.6	The flat connections on bundles over M	159
13.7	The universal covering space	159
13.8	Holonomy and curvature	160
13.9	Proof of the classification theorem for flat connections	162
	Appendix 13.1 Smoothing maps	164
	Appendix 13.2 The proof of the Frobenius theorem	166
	Additional reading	169

14 Curvature polynomials and characteristic classes 170

14.1	The Bianchi Identity	170
14.2	Characteristic forms	171
14.3	Characteristic classes: Part 1	174
14.4	Characteristic classes: Part 2	175
14.5	Characteristic classes for complex vector bundles and the Chern classes	177
14.6	Characteristic classes for real vector bundles and the Pontryagin classes	179
14.7	Examples of bundles with nonzero Chern classes	180
14.8	The degree of the map $g \rightarrow g^m$ from $SU(2)$ to itself	189
14.9	A Chern–Simons form	190
	Appendix 14.1 The ad-invariant functions on $M(n; \mathbb{C})$	190
	Appendix 14.2 Integration on manifolds	192
	Appendix 14.3 The degree of a map	197
	Additional reading	204

15 Covariant derivatives and metrics 205

15.1	Metric compatible covariant derivatives	205
15.2	Torsion free covariant derivatives on T^*M	208
15.3	The Levi-Civita connection/covariant derivative	210
15.4	A formula for the Levi-Civita connection	211
15.5	Covariantly constant sections	212
15.6	An example of the Levi-Civita connection	214
15.7	The curvature of the Levi-Civita connection	216
	Additional reading	218

16 The Riemann curvature tensor 220

16.1	Spherical metrics, flat metrics and hyperbolic metrics	220
16.2	The Schwarzschild metric	223

16.3	Curvature conditions	224
16.4	Manifolds of dimension 2: The Gauss–Bonnet formula	227
16.5	Metrics on manifolds of dimension 2	229
16.6	Conformal changes	230
16.7	Sectional curvatures and universal covering spaces	232
16.8	The Jacobi field equation	233
16.9	Constant sectional curvature and the Jacobi field equation	236
16.10	Manifolds of dimension 3	238
16.11	The Riemannian curvature of a compact matrix group	239
	Additional reading	244
<hr/>		
17	Complex manifolds	245
<hr/>		
17.1	Some basics concerning holomorphic functions on \mathbb{C}^n	246
17.2	The definition of a complex manifold	247
17.3	First examples of complex manifolds	248
17.4	The Newlander–Nirenberg theorem	251
17.5	Metrics and almost complex structures on TM	255
17.6	The almost Kähler 2-form	255
17.7	Symplectic forms	256
17.8	Kähler manifolds	257
17.9	Complex manifolds with closed almost Kähler form	258
17.10	Examples of Kähler manifolds	259
	Appendix 17.1 Compatible almost complex structures	261
	Additional reading	267
<hr/>		
18	Holomorphic submanifolds, holomorphic sections and curvature	268
<hr/>		
18.1	Holomorphic submanifolds of a complex manifold	268
18.2	Holomorphic submanifolds of projective spaces	269
18.3	Proof of Proposition 18.2, about holomorphic submanifolds in $\mathbb{C}P^n$	271
18.4	The curvature of a Kähler metric	272
18.5	Curvature with no $(0, 2)$ part	275
18.6	Holomorphic sections	277
18.7	Example on $\mathbb{C}P^n$	279
	Additional reading	281

19	The Hodge star	282
<hr/>		
19.1	Definition of the Hodge star	282
19.2	Representatives of De Rham cohomology	283
19.3	A fairy tale	284
19.4	The Hodge theorem	285
19.5	Self-duality	286
	Additional reading	287
<hr/>
