PREFACE	vii
INTRODUCTION	ix
CHAPTER 1. THE NUCLEAR PERIODIC TABLE	1
1.1. The periodic table, radioactivity and unstable nuclear states	1
1.2. Nuclear mass	9
1.3. Nuclear binding energy	13
1.4. Nuclear size	15
1.5. The semiempirical mass formula	34
1.6. The independent particle model, magic numbers and shell structure within the nucleus	45
1.7. Nuclear forces	56
CHAPTER 2. ANGULAR MOMENTUM AND THE NUCLEUS	60
2.1. Central forces, orbital angular momentum and spin	60
2.2. The quantum mechanical definition of angular momentum	63
2.3. Parity	66
2.4. Static electric moments	72
2.5. Static magnetic moments—the magnetic dipole moment	82
2.6. ● Diatomic molecular spectra and nuclear spin	97
CHAPTER 3. NUCLEAR DECAY	101
3.1. Introduction	101
3.2. The Fermi Golden Rule	103
3.3. Electromagnetic decay of nuclei	109
3.4. Electric dipole transitions	114
3.5. Transitions other than electric dipole terms	118
3.6. ● Internal conversion	124
3.7. ● $0 \rightarrow 0$ transitions	129
3.8. Measurement of lifetimes in electromagnetic transitions	132
3.9. Determination of multipolarities in electromagnetic decay	135
3.10. Nuclear decay through the weak interactions— $\beta$ -decay. Introduction	139
3.11. The theory of $\beta$ -decay	142
3.12. Relativistic effects in $\beta$ -decay	154
3.13. Non-conservation of parity in the weak interactions	161
3.14. The weak interactions and parity, charge conjugation and time reversal	172
3.15. Odd remarks on $\beta$ -decay	174
3.16. ● $\alpha$ -decay	175
3.17. ● $\alpha$ -decay and the Fermi Golden Rule	184
CHAPTER 4. NUCLEAR REACTIONS	188
4.1. Introduction	188
4.2. Qualitative features of nuclear reactions	189

## Contents

4.3.	The concept of cross-section	192
4.4.	Nuclear reactions and the Fermi Golden Rule	198
4.5.	The partial wave analysis	206
4.6.	Cross-sections and spin	213
4.7.	Time-independent potentials: the optical model	218
4.8.	● Time-independent potentials: the two-nucleon system	220
4.9.	● Time-independent potentials: neutron capture by protons	237
4.10.	Resonances. Introduction	243
4.11.	Resonances in scattering from a potential hole	247
4.12.	Structure resonances: the compound nucleus and low-energy reactions	252
4.13.	● The coulomb barrier	272
4.14.	Examples of direct reactions: peripheral scattering processes	287
4.15.	● Examples of direct reactions: pickup and stripping reactions	292
4.16.	Examples of direct reactions: neutrino interactions	294
<b>CHAPTER 5. SELF-SUSTAINING NUCLEAR REACTIONS AND NUCLEAR ENERGY SOURCES</b>		<b>300</b>
5.1.	Introduction	300
5.2.	Nuclear fission	301
5.3.	Induced fission	308
5.4.	Secondary features of fission	309
5.5.	Physics of the fission reactor	311
5.6.	Time constant of a fission reactor	318
5.7.	A note on breeding and fast neutron reactors	321
5.8.	Thermonuclear reactions and stellar evolution. Introduction	321
5.9.	Hydrogen-burning processes in the stars	324
5.10.	Stellar evolution during hydrogen burning	334
5.11.	Helium burning	338
5.12.	Stellar evolution after helium burning	342
5.13.	Thermonuclear power plants? Introduction	351
5.14.	Nuclear physics of a fusion reactor	352
5.15.	Optimal conditions for fusion reactor operation	355
5.16.	Magnetic containment of charged particles	357
<b>CHAPTER 6. ● ISOSPIN</b>		<b>362</b>
6.1.	Introduction	362
6.2.	Exchange symmetry: identical and non-identical nucleons	362
6.3.	The nucleon and isospin	365
6.4.	Isospin and nuclear structure	372
6.5.	Isospin and nuclear decay: electromagnetic decay	379
6.6.	Isospin and nuclear decay: $\beta$ -decay	386
6.7.	The pion and isospin	389
6.8.	Strange particles	398
6.9.	Concluding remarks	406
<b>APPENDIX 1. ENERGY UNITS AND CONSTANTS</b>		<b>408</b>
<b>APPENDIX 2. ANGULAR MOMENTUM COUPLING</b>		<b>410</b>
<b>INDEX</b>		<b>413</b>
<b>OTHER TITLES IN THE SERIES</b>		<b>419</b>
